<b>Document Title</b>	Prepared Testimony of Michael J. Harris, Ph.D., Econ One on Behalf of the California Parties
<b>Document Author</b>	Michael J. Harris, Ph.D.
<b>Doc. Date (mm/dd/yyyy)</b>	03/03/03
<b>Specific finding made or proposed</b>	Prices in the ISO and PX Spot Markets from October 2, 2000 to June 20, 2001 were unjust and unreasonable. Prices before October 2, 2000 were not consistent with Sellers' market-based rate tariffs and those of the ISO and PX. Seller withholding and other market manipulation, not buyer underscheduling, led to forced reliance on the Real-Time Market. The border price indices currently used in the refund calculations pursuant to the <i>July 25th Refund Order</i> are not appropriate for use in this proceeding.
<b>Time period at issue</b>	a) before 10/2000; b) between 10/2000 and 6/2001.

<b>Indicate if Material is New or from the Existing Record (include references to record material)</b>	New
<b>Explanation of what the evidence purports to show</b>	The concerns that Staff expressed in their August 2002 report relating to the validity of the California natural gas indices are valid. Further, recent evidence shows that the parties who manipulated the gas price indices did so knowingly and intentionally. Recent evidence also shows that the major energy firms doing business in the California market were aware that the indices did not reflect the actual prices for which gas was being bought and sold. These developments conclusively show that the California indices were fatally flawed and therefore inappropriate as an input to the MMCP.

**PREPARED TESTIMONY OF  
MICHAEL J. HARRIS, Ph.D., ECON ONE,  
ON BEHALF OF THE CALIFORNIA PARTIES**

- 1 Q. Please state your full name, occupation and business address.
- 2 A. My name is Michael Harris. I am a Senior Economist with Econ One Research,
- 3 Inc., a consulting firm that provides analysis and advice to clients on issues related
- 4 to the economics of markets, both competitive and regulated. My business address
- 5 is 601 West 5<sup>th</sup> Street, Fifth Floor, Los Angeles, California 90071.
- 6

1 Q. Are you the same Michael Harris who filed a declaration in response to the  
2 Federal Energy Regulatory Commission's (the Commission) August 13, 2002  
3 Notice Requesting Comment On Method For Determining Natural Gas Prices For  
4 Purposes of Calculating Refunds?<sup>1</sup>

5 A. Yes I am. In addition, I have also filed testimony and declarations on natural gas  
6 pricing issues on behalf of the California Parties in the proceedings before Judge  
7 Birchman in these dockets and in requests for rehearing of Commission Orders at  
8 these dockets. My curriculum vitae is attached as Exh. No. CA-16 (Appendix A).

9

10 Q. What is the purpose of your testimony?

11 A. The purpose of this testimony is to comment on recent developments related to the  
12 validity of the California natural gas price indices used to calculate the Mitigated  
13 Market Clearing Price (MMCP). These developments arose subsequent to the  
14 October 2002 filing of my declaration in response to the Commission's August  
15 2002 Request For Comments. The developments consist of: reports issued by the  
16 Commission; new admissions by major energy companies that their employees  
17 knowingly provided false information to the reporting publications; indictments of  
18 key employees; evidence obtained through discovery pursuant to the  
19 Commission's November 20, 2002 Order initiating "100 days of discovery" in  
20 these dockets (November 20 Order); as well as other developments in the  
21 marketplace, industry, and investigations by federal and state agencies.

22 In addition, in my October 2002 declaration in Appendices E and F, I provided a  
23 detailed calculation showing the alternative pricing methodology recommended by  
24 the Commission Staff. The price series contained in Appendices E and F was  
25 calculated for the period October 2, 2000 to June 20, 2001. In this testimony I

---

<sup>1</sup> Notice Requesting Comment On Method For Determining Natural Gas Prices For Purposes of Calculating Refunds, August 13, 2002, Docket Nos. EL00-95-045, EL00-98-042

1 expand this price series to reflect implementation of Staff's recommendation for  
2 the period May 1, 2000 to June 20, 2001, consistent with the temporal scope of  
3 discovery in the November 20 Order.  
4

5 Q. Please summarize your testimony.

6 A. I would first point out that the issues and concerns identified by the Commission  
7 Staff in its August 2002 Report continue to be valid.<sup>2</sup> Indeed, recent developments  
8 have only served to confirm, highlight, and amplify Staff's concern with respect to  
9 the validity of the California natural gas price indices. The issues and concerns  
10 identified by Commission Staff have now been echoed by the Commission itself,  
11 other regulators, the U.S. Department of Justice (DOJ) as well as the industry.  
12 Recent developments make it clear that Staff's concerns regarding potential  
13 manipulation of these indices were valid and indeed likely understated. In  
14 addition, recent evidence confirms that those who engaged in manipulation did so  
15 with the express intent of manipulating prices in the California market. Finally,  
16 evidence uncovered in the process of discovery makes it undeniably clear that  
17 major energy firms in the California market knew that the California indices did  
18 not reflect the price at which gas was bought and sold. Rather, these entities  
19 acknowledged that the indices provided vastly inflated values for the price of  
20 natural gas in California. Taken individually, any of the developments just  
21 described is enough to cast further suspicion on the validity of the indices. Taken  
22 collectively, the recent developments conclusively demonstrate that the California  
23 indices are fatally flawed and inappropriate as an input to the MMCP. In short,  
24 the California indices are broken and cannot be fixed. In light of the problems

---

<sup>2</sup> *Initial Report On Company-Specific Separate Proceedings and Generic Reevaluations; Published Natural Gas Price Data; and Enron Trading Strategies Fact Finding Investigation Of Potential Manipulation Of Electric and Natural Gas Prices*, Docket No PA02-2-000, Prepared by the Staff of the Federal Energy Regulatory Commission, August 2002.

1 with the indices, a pricing alternative is needed. The Commission Staff has  
2 provided a reasonable pricing alternative.

3  
4 Q. Please briefly discuss some of the concerns Staff identified in its August 2002  
5 report.

6 A. To begin, the Commission Staff pointed out that the gas indices used to calculate  
7 the MMCP were inconsistent with the observed clearing prices in the auctions run  
8 by the California Independent System Operator Corporation (ISO). Dr. Carolyn  
9 Berry, who filed a declaration in conjunction with mine, in October 2002, found  
10 that in many instances the bid of the marginal unit was less than the MMCP  
11 calculated using the California border indices. This is a clear indication that the  
12 MMCP could not accurately reflect the costs of the marginal unit, thus confirming  
13 Staff's notion of inconsistency between the MMCP and observed auction clearing  
14 prices.

15 Staff in its report also noted the importance of Enron Online (EOL) as a source of  
16 price information. Specifically, Staff noted that EOL served in a "self-referential"  
17 or circular role in establishing the indices. Further, in its investigation Staff  
18 uncovered what appears to be highly suspicious trading activity on EOL. In my  
19 declaration I agreed with Staff's assessment of the potential for manipulation on  
20 EOL and thus am equally concerned about the pivotal role played by EOL in  
21 establishing index prices.

22 In its investigation Staff also conducted and reported the results of a correlation  
23 analysis that showed how prices in California began to greatly diverge from those  
24 at a major pricing hub like Henry Hub in Louisiana during the period October  
25 2000 to July 2001. I replicated Staff's analysis and agree that correlation analysis  
26 is a useful means for assessing whether markets are linked. Staff concluded that  
27 the low correlation coupled with other evidence of the unreliability of the indices

1 supports a finding that the prices at the California delivery points were  
2 inappropriate for setting rates.

3  
4 Q. Has the Commission itself raised any concerns regarding the validity of the natural  
5 gas price indices?

6 A. Yes. The concerns identified by Staff in its August 2002 report and the conclusion  
7 drawn that the indices not be used for setting rates have been echoed in other  
8 pronouncements and actions taken by the Commission. At the Commission's  
9 January 15, 2003 Open Meeting, following a presentation by Commission Staff on  
10 gas index issues, Commissioner Brownell concluded that she would like to  
11 convene a technical conference in the near future to look at the range of solutions  
12 to the problems observed with the indices. Commissioner Massey agreed with  
13 Commissioner Brownell's statement.<sup>3</sup>

14 The Commission's faith in the reliability of the indices has also caused it to pause  
15 and consider whether the entire task of gathering, compiling, and reporting natural  
16 gas prices should be assumed by a governmental agency. At the January 15, 2003  
17 Open Meeting, Commissioner Massey indicated he had discussions with Chairman  
18 Wood that dealt with the possibility of involving the Energy Information  
19 Administration to gather and publish price information.<sup>4</sup>

20  
21 Q. Is there any evidence that the concern over the reliability of the indices is affecting  
22 the natural gas industry?

23 A. Yes. The Commission's concerns about the reliability of the indices are echoed in  
24 the industry itself. A January 16, 2003 article discussing the reliability of the  
25 indices alluded to the difficulty faced by the natural gas producing community.

---

<sup>3</sup> Exh. No. CA-16 (Appendix B) at 22 (815<sup>th</sup> Commission Meeting, Open Meeting, January 15, 2002).

<sup>4</sup> *Ibid* at 20.

1 The article explained how producers such as Houston-based Apache Corporation  
2 were suffering damage from the problems with the indices in that it was difficult  
3 for lenders to evaluate the producers' deals. The article quoted Mr. O'Brien,  
4 Apache's director of governmental affairs: "It's a tough enough chore to run a  
5 commodity-based business, because commodities by their very nature have ups  
6 and downs in the price. It's almost impossible when you have no confidence in  
7 the price whatsoever."<sup>5</sup>  
8

9 Q. Has anyone who was actually responsible for compiling price information for the  
10 trade publications commented on the extent of false reporting?

11 A. Yes. In testimony November 18, 2002 before the California Senate Select  
12 Committee to Investigate Price Manipulation of the Wholesale Energy Market,  
13 Ms. Michelle Markey provided comments on the extent of false reporting.<sup>6</sup> Ms.  
14 Markey was in charge of the gas and electric price teams that gathered information  
15 for the Gas Daily and Megawatt Daily and Inside FERC publications. Senator  
16 Joseph Dunn, the Chairman of the Committee, posed the following question to  
17 Ms. Markey:

18 "Given what you just responded, in your opinion is it common  
19 practice for the traders to exaggerate the prices when reporting to the  
20 indices"?

21  
22 Ms. Markey responds:

---

<sup>5</sup> Exh. No. CA-16 (Appendix C) at 25 (Federal Regulators Want Natural Gas Firms to Show Prices Are Reliable, *Energy Central Daily Gas News*, January 16, 2003, available at: [http://www.energycentral.com/sections/gasnews/gn\\_printer\\_friendly.cfm?id=3575370](http://www.energycentral.com/sections/gasnews/gn_printer_friendly.cfm?id=3575370)).

<sup>6</sup> Exh. No. CA-16 (Appendix D) at 27 (Transcript of State of California, Senate Committee to Investigate Price Manipulation of the Wholesale Energy Market, Hearing Re. Natural Gas Investigation Update, November 18, 2002.) Ms. Markey testified under a grant of immunity, given the potential criminal implications of false price reporting.

1 "It was common industry knowledge that exaggeration was an  
2 accepted practice."<sup>7</sup>

3 Later in her testimony Ms. Markey states:

4 "Common practice was to exaggerate your transactions to the price  
5 reporters, report more volume, report a higher price than that was  
6 actually transacted. You stretched your price in favor of what the  
7 company's position was, or don't report at all, because you would  
8 know whether or not your indices—your volumes and price could in  
9 fact affect the index."<sup>8</sup>

10

11 Q. Has the Staff made any specific policy recommendations other than those that may  
12 be contained in the original August 2002 report?

13 A. Yes. First, I think it can be said that the Commission Staff has not wavered from  
14 its August 13 findings but instead has now gone beyond those findings to suggest  
15 specific policy actions. As a reflection of its findings that these indices are  
16 inappropriate for setting rates, the Staff in its January 15, 2003 presentation at the  
17 Commission's Open Meeting recommended that natural gas companies be barred  
18 from tying pipeline rates to published price indices until minimum standards can  
19 be met.<sup>9</sup>

20

21 Q. Aside from concerns raised in the August 2002 report, is there an ongoing concern  
22 at the Commission regarding price manipulation?

23 A. Yes. A recent report by the Commission's Office of Market Oversight and  
24 Investigations makes it clear that not only does the evidence show that price

---

<sup>7</sup> *Ibid* at 46

<sup>8</sup> *Ibid*. at 48.

<sup>9</sup> Exh No. CA-16 (Appendix B) at 14.

1 manipulation has occurred but there is a very real concern that it is ongoing.<sup>10</sup> In  
2 Issue 3 of the report titled, “Shaken Confidence in Price Discovery Methods” the  
3 authors outline how recent revelations about false price reporting have created a  
4 “crisis of confidence” in price discovery.<sup>11</sup> Specifically, the report notes that the  
5 actions of traders who have lied to the energy trade publications with the intention  
6 of manipulating prices have served to undermine confidence across the entire  
7 industry.<sup>12</sup> The report also highlights the conundrum faced by the Commission  
8 given the lack of serious alternatives to trade press developed indices and the  
9 reluctance of the trade press to provide adequate details about how prices are  
10 developed.<sup>13</sup> Issue 5 of the report notes that the Commission, while discovering  
11 “extensive evidence” of lying about prices to trade publications, is also concerned  
12 that the potential for manipulation may now be heightened.<sup>14</sup> Specifically, the  
13 authors suggest that the current reduction in numbers of “wholesale market  
14 participants and reduced liquidity and transparency at pricing points may increase  
15 the potential for manipulation.” Such is the case because having fewer traders can  
16 actually reduce the statistical significance of reporting for trading points that are  
17 less than active.<sup>15</sup> The 2003 report thus confirms and reiterates the concerns that  
18 were central to the August 2002 Staff report.

19  
20 Q. Have any other regulatory bodies investigated manipulation of the price indices?

21 A. Yes. On November 21, 2002 the California Public Utilities Commission (CPUC)  
22 issued an Order initiating an investigation into the causes of the extraordinarily  
23 high prices of natural gas delivered to the border during 2000 and 2001,

---

<sup>10</sup> Exh. No. CA-16 (Appendix E) at 79 (2003 Natural Gas Market Assessment, Staff Report By The Office of Market Oversight and Investigations Federal Energy Regulatory Commission, Winter 2002-03).

<sup>11</sup> *Ibid* at 95

<sup>12</sup> *Ibid*

<sup>13</sup> *Ibid*

<sup>14</sup> *Ibid* at 105-06

<sup>15</sup> *Ibid* at 105.

1 particularly during the period between December 2000 and May 2001. In its  
2 “Order Instituting Investigation: Phase I,” the CPUC summarized the issues and  
3 provided some background as to what necessitated the investigation. In describing  
4 the scope of the proceeding, the CPUC identified the questions it is interested in  
5 investigating. These questions include whether any of the entities or their  
6 affiliates under the CPUC’s regulatory jurisdiction played a role in the price  
7 increases. The CPUC was also interested in the role, if any, of utility gas cost  
8 incentive mechanisms and what factors, in addition to the actions of El Paso,  
9 caused the increase in gas costs. Finally, the CPUC posed the question: “Did  
10 recently acknowledged inaccurate reporting of gas price information to energy  
11 trade publications by energy trading companies have any effect on published index  
12 prices?”<sup>16</sup>

13  
14 Q. What can be said about the recent actions of the Commission and other regulatory  
15 bodies with regard to price manipulation?

16 A. The pronouncements and actions made and being taken by the Commission and  
17 other regulatory bodies reflect the growing body of evidence that demonstrates  
18 that traders at major energy companies repeatedly lied to the trade publications  
19 with the express intent of manipulating prices. At the time the August 2002 Staff  
20 Report was issued, no trader or energy company had come forward and confessed  
21 to engaging in price manipulation. At the time my October 2002 declaration was  
22 filed, two companies, Dynegy and American Electric Power (AEP), conceded in  
23 press releases that their employees had lied to industry publications. Specifically,  
24 on September 25, 2002 Dynegy announced that it had discovered that 15 of its

---

<sup>16</sup> Exh. No. CA-16 (Appendix F) at 110, 118-19 (Before the California Public Utilities Commission of the State of California, Order Instituting Investigation Phase 1, Filed Public Utilities Commission, November 21, 2002 San Francisco Office, Investigation 02-11-040, Preliminary Scoping Memo)

1 employees had engaged in false reporting. On October 9, 2002 AEP similarly  
2 announced that five of its employees had provided inaccurate information to the  
3 energy publications. Since October three additional energy firms -- El Paso,  
4 Williams, and CMS -- have admitted that their traders were engaged in false  
5 reporting. On October 25, 2002, Williams announced that it had learned its  
6 natural gas traders provided inaccurate information to energy industry  
7 publications. On November 4, 2002 CMS announced that a preliminary analysis  
8 found that employees in two subsidiaries provided inaccurate data to the trade  
9 press. In some cases, the energy firms proclaimed that the responsible people  
10 were dismissed or had "left the company" and the actions of these individuals  
11 were found as a result of internal reviews of trading activities. What is now clear  
12 is that the price manipulation was not limited to a lone rogue trader. Rather, the  
13 evidence now makes it clear that this activity occurred in the trading departments  
14 of numerous major energy companies representing a wide swath of the industry.

15  
16 Q. Can the index manipulation be described solely in terms of false reporting, where  
17 a trader, say, exaggerates the price received in a transaction to the trade  
18 publication?

19 A. No. In addition to falsely reporting actual trades, some of the energy companies  
20 engaged in something called "wash trades" that also served to manipulate the  
21 indices. A wash trade is simply a "paper" transaction between two entities. For  
22 example, entity A may state that it sold 10,000 MMBtu of gas at \$8.00/MMBtu to  
23 entity B who in turn reports that it sold 10,000 MMBtu of gas at \$8.00/MMBtu to  
24 entity A. No gas, of course, is exchanged. Rather each transaction is a mirror  
25 image of the other and thus cancels, or "washes," the other out. Energy companies  
26 have admitted to engaging in wash trades as a means to boost revenue. In  
27 addition, wash trades have the secondary effect of altering the price indices. Ms.

1 Markey, in her testimony described how wash trades work and specifically how  
2 they can impact the price indices.<sup>17</sup>

3

4 Q. Do you have any quantitative evidence regarding the extent of wash trades by any  
5 of the generators?

6 A. Yes. I have reviewed data submitted by Enron as part of its discovery response in  
7 FERC Docket PA02-2 to questions concerning wash trades. There were a number  
8 of spreadsheet files that detailed wash trades. As a means to illustrate the extent of  
9 wash trading, I focused on approximately one month's worth of transactions.  
10 Specifically, for December 1, 2000 to December 29, 2000 in a file with a tab titled  
11 "Wash Txn-No Duplicates" there was approximately 2,850,000 MMBtu of wash  
12 trade transactions.<sup>18</sup> The minimum and maximum "fee" for these trades was  
13 \$12.00/MMBtu/day and \$66.00/MMBtu/day, respectively. The weighted average  
14 "fee" over this period was \$39.56/MMBtu/day. A significant proportion of the  
15 high-priced wash trades in December 2000, during the peak of the California spot  
16 price spikes, involved Reliant transacting with Enron at Southern California  
17 delivery points. This is notable in light of the fact that it was testimony by Reliant  
18 officer John Stout that formed the basis for the Commission's original decision, in  
19 the July 25, 2001 Order, to rely on the California border spot price indexes for  
20 setting the MMCP.<sup>19</sup> Reliant's responses in PA02-2 to the Commission's wash  
21 trade data requests deny any gas wash trades in the Western United States – but as  
22 is discussed in other California Parties' testimony, Reliant's prior statements to the

<sup>17</sup> Exh. No. CA-16 (Appendix D) at 67 (Transcript of State of California, Senate Committee to Investigate Price Manipulation of the Wholesale Energy Market, Hearing Re: Natural Gas Investigation Update, November 18, 2002).

<sup>18</sup> Exh. No. CA-16 (Appendix G) at 124-47.

<sup>19</sup> *San Diego Gas & Electric Co., et al.*, 96 FERC ¶ 61,120 at 61,518 (2001) *Report and Recommendation of Chief Judge and Certification of Record*, citing 96 FERC ¶ 63,007 at 65,040 (2001), citing Tr. 601. A copy of Tr. 601, Mr. Stout's testimony, is attached hereto as Exh. No. CA-16 (Appendix H) at 153

1 Commission and other investigative bodies have shown numerous inconsistencies  
2 with the facts as elicited through discovery.

3  
4 Q. Has any legal action been taken against individuals engaged in the price  
5 manipulation?

6 A. Yes. The seriousness of the revelations of false reporting has not escaped the  
7 DOJ. The U.S. Attorney's Office for the Southern District of Texas recently  
8 unsealed two indictments charging traders with knowingly transmitting false  
9 information. Specifically, on December 4, 2002 the DOJ announced a two count  
10 indictment charging Mr. Todd Geiger, a natural gas trader and former Vice  
11 President of El Paso Corporation, with knowingly transmitting a false trade report  
12 used to calculate the index prices of natural gas.<sup>20</sup> On January 27, 2003 the same  
13 office of the DOJ unsealed a seven-count indictment charging Ms. Michelle Marie  
14 Valencia, a former senior natural gas trader who headed the Western U.S. gas  
15 trading desk for Dynegy Marketing and Trade, with three counts of knowingly  
16 transmitting false trade reports used to calculate index prices and four counts of  
17 wire fraud. In the press release for Ms. Valencia, the U.S. Attorney, Mr. Michael  
18 T. Shelby, highlighted the importance of the indictment by saying, "This  
19 indictment cuts to the heart of the American system of business. Investors have a  
20 right to know the truth about market conditions. We will hold accountable anyone  
21 who intentionally deceives the investing public[.]"<sup>21</sup>

22

---

<sup>20</sup> Exh. No CA-16 (Appendix I) at 163-68 (U.S. Department of Justice, U.S. Attorney's Office Southern District of Texas, News Release (020104 - Geiger, "Former El Paso VP Indicted For Reporting Bogus Trades To Manipulate Price of Natural Gas Market," December 4, 2002 and accompanying indictment, filed December 2, 2003, U.S. District Court for the Southern District of Texas).

<sup>21</sup> Exh. No CA-16 (Appendix J) at 169, (U.S. Department of Justice, U.S. Attorney's Office Southern District of Texas, News Release (030127-Valencia), "Former Dynegy Senior Trader Indicted For Reporting Bogus Trades To Inside FERC," January 27, 2003 and accompanying indictment, filed January 22, 2003, U.S. District Court for the Southern District of Texas).

1 Q. Has any other action been taken against the individuals or companies engaged in  
2 price manipulation?

3 A. Yes. The indictment of Ms. Valencia, just described, followed the resolution of a  
4 civil enforcement action by the U.S. Commodity Futures Trading Commission  
5 (CFTC) against Dynegy. On December 19, 2002, the CFTC issued a settlement  
6 order that found that from at least January 2000 through June 2002, Dynegy  
7 reported false natural gas trading information to reporting firms. The order found  
8 that Dynegy "knowingly submitted false information to the reporting firms in an  
9 attempt to skew those indexes for Dynegy's financial benefit." In addition, the  
10 CFTC noted that to ensure its reported information would be used by the reporting  
11 firms, Dynegy caused West Coast Power to submit information misrepresenting  
12 that West Coast Power was a counterparty to the fictitious trades. West Coast  
13 Power is a joint venture owned by an affiliate of Dynegy Marketing & Trade and  
14 NRG.<sup>22</sup> West Coast Power owns the power plants in Southern California that are  
15 commonly referred to as the Dynegy power plants.

16

17 Q. Is there evidence that California border prices were the specific focus of the price  
18 manipulation?

19 A. Yes. Ms. Valencia, the indicted Dynegy trader, was arrested on charges she  
20 reported fictitious natural gas transactions for California and other Western hubs  
21 to industry publications. Michael Shelby, the U.S. Attorney in Houston, told the  
22 Los Angeles Times that Ms. Valencia "fabricated trades from natural gas pipelines  
23 that were, in the majority of cases, in California."<sup>23</sup> In addition, there was at least  
24 some indication that the activities of Mr. Geiger, the indicted El Paso trader, were

---

<sup>22</sup> Exh. No CA-16 (Appendix K) at 179, 180 (United States Of America Before the Commodity Futures Trading Commission, In the Matter of: Dynegy Marketing & Trade and West Coast Power LLC, Order Instituting Proceedings Pursuant to Sections 6 c and 6 d of the Commodity Exchange Act, Making Findings and Imposing Remedial Sanctions, December 18, 2002)

<sup>23</sup> Exh. No CA-16 (Appendix L) at 186.

1 directed at gas markets in the Western U.S., as he was responsible for trading  
2 natural gas through El Paso's Canadian desk.

3  
4 Q. Can the magnitude of the price manipulation be quantified?

5 A. It is not clear the exact magnitude to which the California border indices were  
6 actually manipulated by the actions of Ms. Valencia, Mr. Geiger or other energy  
7 traders. The information contained in the indictments of these individuals does  
8 not shed such quantitative light. Further, the trade publications have steadfastly  
9 refused to provide adequate details and instead have cited their First Amendment  
10 constitutional rights. Thus, given the lack of quantitative evidence, it would be  
11 difficult to specifically quantify the extent of manipulation.

12  
13 Q. While it is not possible to specifically quantify the extent of the manipulation, is  
14 there specific evidence to indicate the indices clearly did not reflect the price at  
15 which gas was being bought and sold?

16 A. Yes. It is clear based on evidence obtained through discovery that the California  
17 index prices did not reflect what price gas was actually being bought and sold. An  
18 email from an employee at Enron, who during 2000 was the largest gas marketer  
19 in California, illustrates perfectly the "disconnect" between index prices and the  
20 prices received in actual transactions. In a February 6, 2001 email,<sup>24</sup> Mr. Jeffrey  
21 Fawcett explained to a colleague, Mr. Drew Fossum, why he was forced to amend  
22 a deal with Sempra. Mr. Fawcett says:

---

<sup>24</sup> Exh. No. CA-77 at 1.

26

"Drew,

Susan said you were having trouble getting your arms around the logic behind the amendment we're proposing to the Sempra deal. Simply stated, Sempra (like others we've spoken to in the marketing community) is having difficulty selling gas at the Gas Daily Index price. This is not unusual."

The email then goes on to highlight that the prices at the border over the prior weekend were \$12.00/MMBtu while Sempra could only "muster" a sale at \$9.00/MMBtu. Mr. Fawcett explained why he was forced to amend the Sempra deal to reflect the actual sales prices received by Sempra rather than the index, which was how the original deal was structured. Mr. Fawcett closed by informing Mr. Fossum that unless the deal was amended, Sempra would have simply "terminate[d] it." Given Mr. Fawcett expected somewhere in the range of \$2-\$3 million on the deal he explained that he couldn't just "walk away from it."

The February 6, 2001 Enron email from Mr. Fawcett is compelling for a number of reasons. First, it demonstrates very clearly that Enron, the largest gas marketer in California, knew very well that the daily indices did not reflect the price at which gas was being bought and sold. The email is clear that Mr. Fawcett had discussions with not just Sempra but others in the marketing community about the problems with the indices. Second, the email provides some quantitative indication as to the difference between what the indices were reporting and actual transaction prices. As discussed by Mr. Fawcett, the price index for the weekend just prior to the date his email was sent to Mr. Fossum was overstating the prices received by Sempra by over 33%.

1 Q. In your October 2002 declaration you discussed the portfolio strategies of  
2 California generators. Was anything found in the evidence that would corroborate  
3 statements made in your declaration?

4 A. Yes. The evidence has shed light on not only the magnitude to which the  
5 California daily indices overstated actual transactions prices but also on the natural  
6 gas procurement strategies of electric generators. In my October 2002 declaration  
7 I discuss the potential portfolios of the California generators. I note that the use of  
8 a broad portfolio of assets and sophisticated gas supply management techniques  
9 would likely produce a profile of actual gas costs for the generators that had little  
10 similarity to the daily price swings observed over the refund period reflected in the  
11 indices used as inputs to the MMCP.<sup>25</sup> One example of the reasonableness of the  
12 statement in my declaration can be found in a document produced in discovery.  
13 The document was an October 3, 2000 Northern California Power Agency  
14 (NCPA) Interoffice Memorandum.<sup>26</sup> In the memorandum, the author, Mr. Jim  
15 Whalen, discussed a number of issues and concluded with a statement that he  
16 bought gas for the first quarter of 2001 at "over approximately \$6.00 per million  
17 BTU." For purposes of comparison, I calculated the simple average of daily gas  
18 prices as reported by the California indices for January through March 2001. The  
19 simple average for Northern and Southern California was \$9.71/MMBtu and  
20 \$15.17/MMBtu, respectively. These are the indices used in the MMCP  
21 calculation. What this demonstrates is that NCPA, a modestly sized entity, was  
22 able to procure gas for its portfolio, on average, for \$3.71 less than the Northern  
23 index and over \$9.00/MMBtu less than the index for Southern California. Clearly,  
24 both indices, which are inputs to the MMCP, drastically overstated at least a  
25 portion of the actual portfolio cost of gas for at least this relatively small entity.

Q. In your October declaration you also raise the possibility that generators hedged their gas costs. Have you found evidence of hedging?

A. Yes. A March 2, 2001 presentation by Reliant Energy alluded to the impact of hedging. On a slide titled "Commercial Strategy-Success to Date," under the heading of "Multiple ways to win (examples to date)" are numerous items including "Acquired SCE generation assets" and "Leveraged ISO knowledge into significant transmission (FTR) value." Also included in the list is "Covered portfolio gas basis position prior to run up." This last item suggests that Reliant was successful in shielding itself from the run up in natural gas prices.<sup>27</sup>

In addition to the presentation there are documents related to Reliant's financial modeling that make it clear that hedging was a consideration. Reliant produced a report/model titled, "California Wholesale Group Profit/Loss Report." The scope of the profit and loss report was to report, on a next-day basis, all the revenues and costs that affect its California Wholesale Group. The report describes the various "Detailed Data Inputs," which include Fuel Cost. This item is described as follows: "Fuel cost will be calculated by the California Fuel spreadsheet. This spreadsheet takes into account hedged gas and transport prices, as well as gas bought on the spot market."<sup>28</sup> While Reliant may indeed have acquired some spot gas, it is apparent that it was also significantly hedged – enough so that it congratulated itself on avoiding the gas price "run up" in its own position.

Q. Do you have any evidence that would quantify the extent to which Reliant hedged its gas purchases?

---

<sup>27</sup> Exh. No. CA-57 at 6.

<sup>28</sup> Exh. No. CA-58 at 1-2.

1 A. Yes. In data produced by Reliant in discovery,<sup>29</sup> there are a number of  
2 spreadsheets that appear to calculate, on a daily basis, the profit/loss for Reliant's  
3 operations. The spreadsheets are titled "Energy Strategy" and include data on  
4 "Energy Revenue," "Generation Cost," and "Energy Profit." The figure for  
5 Generation Cost in turn references a figure that represents the weighted average  
6 cost of gas (WACOG). The WACOG is calculated as the product of two types of  
7 purchases. The first purchase represents the amount of gas that was hedged while  
8 the second type of purchase represents that amount of gas purchased in the daily  
9 spot market at southern California border prices. I reviewed the data for the  
10 month of December 2000. The data for this month shows conclusively that  
11 Reliant hedged a significant portion of the natural gas used to generate power and  
12 enjoyed equally significant financial benefits. For purposes of illustration I have  
13 reproduced the data and attached it as Exh. No. CA-16 (Appendix M) at 188.  
14 As shown in the exhibit, for the month of December 2000 Reliant purchased  
15 7,904,197 MMBtu of gas. Of this total, 4,380,000 MMBtu was hedged with the  
16 remainder being purchased on the spot market. The simple average price for  
17 hedged gas was \$8.27/MMBtu while the same average for gas purchased in the  
18 spot market was \$26.51. Overall, Reliant's WACOG shown in these files for  
19 December 2000 was \$13.58/MMBtu, or \$12.93/MMBtu less than the spot price of  
20 gas. The difference in price is very significant. Put another way, had Reliant  
21 purchased gas at the southern California index price, for the transactions shown in  
22 the files, it would have incurred approximately \$83,775,645 more in gas costs.  
23 This data is also inconsistent with the testimony of Reliant officer John Stout that  
24 formed the basis for the Commission's original decision, in the July 25, 2001

---

<sup>29</sup> Exh. No. CA-33.

1 Order, to rely on the California border spot price indexes for setting the MMCP.<sup>30</sup>  
2 In his testimony, Mr. Stout stated “The biggest problem that’s inherent in the  
3 model used by the state has to do with gas prices.” He discusses “three problems”  
4 one of which is the “fact” that bid week monthly index prices do not match the  
5 way people buy gas. Specifically, Mr. Stout indicated that if an entity is selling  
6 into the spot market it doesn’t know day to day how much gas it will need. Mr.  
7 Stout concludes, “Therefore, you’re buying it at daily spot prices, not month ahead  
8 index prices.”<sup>31</sup> Clearly, the evidence for December 2000 shows that Reliant was  
9 not purchasing all or the majority of its gas on the spot market and as a result  
10 enjoyed significant cost savings.

11  
12 Q. In your October declaration you calculated and provided a price series that  
13 reflected Staff’s recommendation to use a producing basin index price plus  
14 transportation cost. Have you expanded that price series?

15 A. Yes I have. In my October declaration I calculated the price series resulting from  
16 adopting the Staff’s recommendation to use production basin prices and tariffed  
17 transportation costs in lieu of the flawed California border indices. Specifically, I  
18 calculated the price series reflecting Staff’s recommendation for the period  
19 October 2, 2000 to June 20, 2001. In Exh. No. CA-16 (Appendix N at 189  
20 (Southern California) and Appendix O at 226 (Northern California)), I have  
21 expanded that price series to encompass the period May 1, 2000 to June 20, 2001,  
22 to address the period of time when market manipulation was evident. As reflected

<sup>30</sup> *San Diego Gas & Electric Co., et al.*, 96 FERC ¶ 61,120 at 61,518 (2001) citing *Report and Recommendation of Chief Judge and Certification of Record*, 96 FERC ¶ 63,007 at 65,040 (2001), citing Tr. 601. A copy of Tr. 601, Mr. Stout’s testimony, is attached hereto as Exh No. CA-16 (Appendix H) at 153.

1 in that series, while there are episodic instances where prices using the revised  
2 price series exceed the prices calculated based on gas indices, on balance, and as  
3 further discussed in the testimony of Dr. Stern, it appears it would not result in a  
4 significant change in the overall level of refunds that would be due for the pre-  
5 October 2, 2000 period.

6

7 Q. Does this conclude your testimony?

8 A. Yes.

<b>Specific finding made or proposed</b>	Prices in the ISO and PX Spot Markets from October 2, 2000 to June 20, 2001 were unjust and unreasonable. Prices before October 2, 2000 were not consistent with Sellers' market-based rate tariffs and those of the ISO and PX. Seller withholding and other market manipulation, not buyer underscheduling, led to forced reliance on the Real-Time Market. The border price indices currently used in the refund calculations pursuant to the <i>July 25th Refund Order</i> are not appropriate for use in this proceeding.
<b>Time period at issue</b>	a) before 10/2000; b) between 10/2000 and 6/2001.

<b>Explanation of what the evidence purports to show</b>	The concerns that Staff expressed in their August 2002 report relating to the validity of the California natural gas indices are valid. Further, recent evidence shows that the parties who manipulated the gas price indices did so knowingly and intentionally. Recent evidence also shows that the major energy firms doing business in the California market were aware that the indices did not reflect the actual prices for which gas was being bought and sold. These developments conclusively show that the California indices were fatally flawed and therefore inappropriate as an input to the MMCP.
<b>Party/Parties performing any alleged manipulation</b>	Dynegy; AEP; El Paso; Williams; CMS; Enron; Reliant.

## **CONSULTING PROJECTS**

- Conducted an exhaustive overview of the business and financial risk of, and the impact of diversification on, the U.S. interstate pipeline industry.
- Developed a comprehensive study of the North American natural gas market.
- On behalf of a group of local distribution companies, submitted comments in numerous Generic Hearings to the FERC regarding the competitive structure of the interstate pipeline network.
  
- Developed a market power study of the Alberta natural gas storage market.
- Developed viability studies for numerous new natural gas pipeline projects.
- Developed numerous gas cost incentive mechanisms for LDCs.
- Evaluated and structured LDC outsourcing arrangements for gas supply, transportation and storage.
- Assisted numerous LDCs develop unbundling strategies and programs.
- Assisted in the development of Request for Proposals for gas supply, transportation, and storage assets.
- Acted as third-party evaluator of bids received for LDC gas supply, transportation, and storage services.

(Recess.)

CHAIRMAN WOOD: Our last item today is A-5.

SECRETARY SALAS: The next and final item for discussion is A-5, discussion of the Commission's use of natural gas price indices, with a presentation by Stephen Harvey, accompanied by John Carlson and Marsha Gransee.

*Dec* MR. HARVEY: Good afternoon. Over the past year, Staff has gathered information that raises serious doubts about the accuracy of information reported in many wholesale natural gas price indices. Current industry practice is for the trade press to gather price information by polling traders.

We have seen ample evidence to raise serious questions regarding the functioning of this current industry practice. The natural gas industry cannot function without accurate, dependable, and trustworthy wholesale price information.

Consequently, some action must be taken by the industry to address the problem. We also propose action by the Commission to assure that the orders and tariffs it approves reflect accurate price information.

We would like to review our concerns today by first explaining the Commission's interest in price index formation; second, reviewing the public evidence that raises questions about price index formation; third, defining at a

90

1 high level, the criteria important to developing trustworthy  
2 price information in the future; and, fourth, proposing some  
3 next steps.

4 The Commission's interest in natural gas price  
5 indices relates both to the overall functioning of the  
6 wholesale market, and to specific orders it has approved  
7 that reference these indices. In the 1980s, the natural gas  
8 industry developed an approach to developing and  
9 disseminating wholesale price information, using indices  
10 created and published by the trade press.

11 This practice followed the more established  
12 practice in oil markets. Soon thereafter, certain orders  
13 and tariffs proposed by natural gas companies and approved  
14 by the Commission, contained references to these price  
15 indices.

16 Natural gas price indices developed by the trade  
17 press remain central to the functioning of the wholesale  
18 natural gas markets.

19 Customers depend on these published price indices  
20 to make purchasing decisions. Numerous physical contracts  
21 refer to these price indices explicitly.

22 Financial contracts that value the difference in  
23 prices between locations across the natural gas delivery  
24 system known as BASIS, refer to these price indices.

25 Companies interested in investing in exploration

1 and production, transportation and storage, rely on these  
2 prices to estimate the value of assets.

3 The Commission's current vision is dependable,  
4 affordable energy through sustained competitive markets.  
5 This vision cannot be achieved without the development and  
6 dissemination of fair and trustworthy price information.

7 More specifically, the Commission approved  
8 pipeline tariffs that refer to market price data. There are  
9 three areas where these references tend to happen: First,  
10 cash-out provisions.

11 On most major pipelines, when deliveries and  
12 receipts of natural gas are not in balance, the differences  
13 may be valued and sold to the shipper or purchased by the  
14 pipeline, using market price information.

15 These cash-out provisions allow the industry to  
16 quickly and efficiently account for and eliminate  
17 imbalances.

18 Second, pipeline penalties: In the determination  
19 of pipeline penalties, the Commission sometimes allows  
20 pipelines to use market prices to deter shipper conduct that  
21 could threaten system operations.

22 Third, basis differentials: Many negotiated rate  
23 transportation contracts establish transportation rates,  
24 using the basis differentials between two or more price-  
25 indexed trading points. The Commission does not approve

92

1 natural gas price indices for market-based rates that are  
2 largely the result of contract negotiations between parties,  
3 however, failure of confidence in these bilaterally-  
4 negotiated prices could raise concern.

5 On August 13, 2002, Commission staff made  
6 publicly available, the initial report of its fact-finding  
7 investigation of potential manipulation of electric and  
8 natural gas prices in Western markets, Docket Number PA02-2.  
9 Staff inquired into the characteristics of publicly-  
10 recorded price indices, including natural gas spot prices at  
11 California delivery points, used in the California refund  
12 proceeding.

13 Staff found significant problems with published  
14 price indices. These problems included: First, the  
15 inability to independently verify published price indices.  
16 The sources of price information have not been disclosed,  
17 due to the publisher's concerns about revealing source data.

18 Second, undetected errors that may exist because  
19 trade publications reporting spot and foreign prices do not  
20 employ statistically valid sampling procedures or systematic  
21 formal verification procedures.

22 Third, significant incentives of market  
23 participants to manipulate spot market prices reported to  
24 trade publications because natural gas is the fuel input for  
25 the electricity generators that set the market price in

93

1 California.

2 Fourth, wash trades may have an adverse effect on  
3 reported price data.

4 Fifth, Enron Online, Enron's former electronic  
5 trading platform, was a significant source of price  
6 discovery and information, and was potentially susceptible  
7 to manipulation by market participants, which could affect  
8 the published price indices.

9 The final report from Staff handling this  
10 investigation is scheduled to be released in the first  
11 quarter of this year, and will offer its own analysis,  
12 conclusions, and recommendations on standards for indices.

13 Since the issuance of the Staff initial report,  
14 five companies have admitted that some of their employees  
15 provided false data to the trade press that publish energy  
16 price indices. On September 25, 2002, ~~Dynergy~~ announced that  
17 they had discovered that 15 Dynergy employees had engaged in  
18 reporting false data to trade publications that publish  
19 price indices.

20 On December 18, 2002, the Commodities Futures  
21 Trading Commission announced that it had reached a \$5  
22 million settlement with Dynergy and West Coast Power, LLC.  
23 The sum of it stated that Dynergy had, quote, "knowingly  
24 submitted false information to the reporting firms in an  
25 attempt to skew those indexes to Dynergy's marketing and

HAY/wet

94

1 trading financial benefit."

2 On November 8, 2002, the El Paso Corporation  
3 announced that it had discovered evidence that one of its  
4 employees had misreported trade data to the trade press. On  
5 December 4, 2002, the United States Department of Justice  
6 indicted Tom Gyger, a former Vice President of El Paso  
7 Energy on charges of false reporting and wire fraud.

8 On January 13, 2003, El Paso issued a statement  
9 saying it had found more instances of its traders providing  
10 inaccurate information to inside FERC.

11 On October 9, 2002, EEP announced that it had,  
12 quote, "dismissed five employees involved in natural gas  
13 trading and marketing, after the company determined that  
14 they provided inaccurate price information for use in  
15 indexes compiled and published by the trade publications.

95

1                   On October 25th, 2002, Williams announced it had  
2 learned that natural gas price traders had provided  
3 inaccurate information regarding natural gas trades to an  
4 energy industry publication that compiles and reports index  
5 prices. Williams stated that the inaccuracies came to light  
6 during Williams' independent internal review of its trading  
7 activities.

8                   On November 4th, 2002, CMS announced that it was  
9 conducting an internal review of the natural gas trade  
10 information provided to the trade press by two subsidiaries,  
11 CMS Marketing Services and Trading and CMS Field Services.  
12 CMS stated that a preliminary analysis indicated that  
13 employees had provided inaccurate data. CMS further stated  
14 that it would take appropriate disciplinary action and it  
15 would stop providing information to the trade press.

16                   In the future, Staff proposes that the Commission  
17 require that certain minimum standards be met before natural  
18 gas pipelines are permitted to use natural gas price indices  
19 in new tariffs or for other new regulatory purposes.

20                   Evidence for these new filings will need to be  
21 presented and reviewed to assure that any price index meet  
22 minimum index formation standards. In particular, the index  
23 would need to represent an accurate reflection of the  
24 market. To be approved, a new tariff containing a reference  
25 to an index would need to be shown as demonstrating first

96

1 competence in the accuracy of price reporting, that is, the  
2 ability to verify the reporting of deals actually done, not  
3 simply aggregate opinions.

4 Second, adequacy of coverage, that is, the  
5 ability to assure the collection of adequate information to  
6 represent prices across the relevant marketplace well.

7 Third, information about market liquidity or some  
8 insight into how much trading is going on at a particular  
9 point in order to generate warnings from markets and  
10 confidence for more liquid for verifiability, the ability to  
11 ensure integrity of the process through independent review  
12 through a trustworthy third party.

13 Staff suggests that only after assuring the  
14 Commission that these conditions have been met, should the  
15 natural gas pipelines be approved for use under the new  
16 tariff. In summary, these reports raise serious doubts  
17 about the accuracy of the information reported in many  
18 natural gas price indices. The market cannot function  
19 without accurate dependable trustworthy wholesale price  
20 information.

21 The industry must take the lead in solving this  
22 problem. Staff is tracking several efforts to develop new  
23 approaches to solve it. Additionally, Staff proposes that  
24 the Commission require any new pipeline tariff reference to  
25 natural gas price indices be shown to meet the standards of

1 accuracy, adequacy of coverage, information about market  
2 liquidity and verifiability as outlined today.

3 Thank you.

4 CHAIRMAN WOOD: Thank you Steve. I appreciate  
5 the efforts that have gone on across the staff to look at  
6 this issue. It's unfortunately not a one-day story from  
7 what came out in August in the Staff's initial report in  
8 PA02 and the subsequent information, I do think it's fair to  
9 a caveat out there that all the reports that have come in,  
10 we're not sure what impact that those did have on natural  
11 indices that are being used by parties are being used for  
12 all proceedings but I think it's important for all of us to  
13 be ahead of that curve and to provide some leadership as to  
14 what part of the universe it applies to us, expecting full  
15 well that that same leadership will have repercussions for  
16 other uses of gas.

17 The gas transition from a highly regulated  
18 industry to a very competitive one is one of the great  
19 moments of this Agency's history and I want to make sure  
20 that the actions we take in 2002 do not erode the  
21 significant benefits for customers that have come as a  
22 result of FERC and Congressional initiatives in the gas  
23 industry. I do fear, however, that the erosion of  
24 confidence in the gas indices that has taken place in the  
25 past six months particularly, as this has come more and more

1 to public realization may well impede the benefits that  
2 customers get from this industry working as well as it does  
3 and I do look forward to constructive and thoughtful  
4 solutions from parties across the board to resolve this  
5 issue. And I'm pleased with Staff's thoughts in that regard  
6 and hope that can help inform and frame the debate going  
7 forward.

8 COMMISSIONER MASSEY: Thank you for this report.  
9 Let me ask you a couple of questions. On page five, it says  
10 in the future Staff proposes that the Commission require  
11 that certain minimum standards be met before the natural gas  
12 pipelines are permitted to use natural gas price indices in  
13 new tariffs or for other regulatory purposes. What about  
14 the existing purposes if these indices are inaccurate?  
15 What are we to do? Do you have any recommendations?

16 MR. HARVEY: At this point, the industry does  
17 have several initiatives looking at making revisions even as  
18 we speak. Those changes potentially could improve, possibly  
19 improve the performance of these indices. At this point,  
20 it's not completely clear exactly what will happen with  
21 regard to that kind of price formation. We have not spent  
22 time looking at all the existing orders and determining  
23 anything there.

24 COMMISSIONER MASSEY: I guess I was focused more  
25 on the question of Commission policy with respect to the

**ACE-FEDERAL REPORTERS, INC.**

Nationwide Coverage

212-347-3700

99

1 existing use of indices that may not be accurate, existing  
2 tariffs, thing that are already on the books that are being  
3 relied upon. What should we do about that?

4 MS. GRANSEE: Commission Massey, I would assume  
5 that to some extent we would rely on parties bringing  
6 complaints before us if they feel that there's an unfairness  
7 going on there. As we detailed here on I think it was page  
8 two, where those are used, they're used in pipeline tariffs  
9 now in fairly limited instances for cashouts and penalties.  
10 Our policy all along on penalties has been that we hope  
11 that, for the most part, penalties are never actually used.  
12 I think the cashouts are used now to some extent but I think  
13 that those are used in fairly narrow circumstances today.

14 Of course the Commission could also undertake  
15 Section 5 action on a pipeline's tariffs but as you know, if  
16 we did that, the Commission would bear the burden of proof  
17 to change the company's tariffs at this point.

18 COMMISSIONER MASSEY: Thank you. A couple of  
19 other questions. It seems to me that much of this paper  
20 would also apply to spot electric indexes as well. We rely  
21 and certainly the marketplace relies on a number of these  
22 indices. COB, Paloverde, a number of others that are used  
23 as pricing plans. They've been used in Commission orders  
24 approving proposals to rely on those pricing points for  
25 ancillary service transactions and other kinds of

ACE-FEDERAL REPORTERS, INC.

100

1 transactions.

2 I have the same concerns with respect to the  
3 accuracy of the electric indices, and wondered if your  
4 looking at this and your reporting on this explored the  
5 electric market as well, or did you limit yourselves to the  
6 gas market?

7 MR. HARVEY: To my knowledge, we have not seen  
8 public information with regard to electric price index  
9 formation but certainly the formation would be similar and  
10 some of the same concerns would apply because we did not  
11 specifically look at it and we have not again, to my  
12 knowledge, seen public information as we went through here  
13 on natural gas indices with regard to electric. We did not  
14 pursue that.

15 COMMISSIONER MASSEY: It would seem to me that  
16 some of the same concerns would be applicable there too. I  
17 suppose that once there's an RTO functioning in every region  
18 of the country with transparent spot prices, locational  
19 marginal pricing that we solve a lot of these problems for  
20 the electric marketplace with respect to the validity of  
21 electric power indices. Would you agree with that?

22 MR. HARVEY: Absolutely. A much clearer  
23 resolution of price discovery.

24 COMMISSIONER MASSEY: The other question I have,  
25 I was talking to Pat about this yesterday, is a question I

ACE-FEDERAL REPORTERS, INC.

101

1 have about the involvement of the Energy Information  
2 Administration in gathering this data, gathering price  
3 information. At some point in the debate over this  
4 question for the past six months to a year, I know that  
5 issue was in play whether EIA would take this on as a  
6 responsibility, and I wanted to see what my colleagues know  
7 about that and see what Staff knows about that.

8 Is that a viable option? Is that a good idea,  
9 bad idea? What is your thinking about it.

10 CHAIRMAN WOOD: I met with the new administrator,  
11 Guy Caruso, about a month or so ago and I think certainly  
12 it's a resource issue for them and taking over the storage  
13 data has certainly been a challenge. You know, at that  
14 stage, I guess it was a little before some more of the  
15 dominoes kept coming. I think there's a strong  
16 institutional desire to have but I think we all know  
17 somebody on the government side of the fence has got to do  
18 it and we're going to have to talk about that.

19 Again I mentioned to them, I've got an open mind.  
20 This could perhaps be solved on the industry side of the  
21 fence, but quite frankly on the electric side, with order  
22 2001, which we promulgated last year, we therefore have an  
23 underlying cushion that data come in from across the entire  
24 industry and that therefore the index is ultimately  
25 auditable, so we have to define it based on required data.

102

1 There are different roles that we need to play. I quite  
2 frankly did not move down that path. It's just not a place  
3 where it's quite as ripe as it is today.

4 COMMISSIONER BROWNELL: In answer to your  
5 question and kind of part of where I would like to us go  
6 with this, I for one think it's interesting. We've all read  
7 the newspapers and we're glad people have stepped up to the  
8 plate. But I haven't seen any substantive evaluation about  
9 the scope of the problem, the history of the problem, the  
10 impact of the problem and while I understand the press's  
11 reluctance to share source information, that's a long  
12 history in our country and I appreciate that. I think we  
13 have a whole lot more work to do before we come to any  
14 conclusions and so I would support aggressively pursuing  
15 this and getting a better understanding of what the issues  
16 really are before we try and provide an answer.

17 I'm assuming we're working with other agencies  
18 who are also concerned about this issue. Is that correct?

19 MR. HARVEY: Yes, we have had some conversations.

20 COMMISSIONER BROWNELL: I think we did get 20 or  
21 30 sets of recommendations in the process of the West-Wide  
22 investigation, is that correct?

23 MR. HARVEY: I'm not exactly familiar with the  
24 West-Wide investigation but I believe they have been  
25 reported to have been discussing this issue.

1                   COMMISSIONER BROWNELL: I would like to see us  
2 hold a technical conference in the not too distant future to  
3 really define the problem, maybe a cosponsored one with one  
4 of the other relevant agencies, and look at the range of  
5 solutions that have been recommended.

6                   I know there are some industry initiatives. I  
7 think your set of recommendations reflects one of them but  
8 there is a problem and reading about it in the newspaper  
9 every day makes it more of a problem. I just wanted to  
10 understand how much more of a problem it was and what the  
11 impact really is so that we can craft a solution that is  
12 appropriate to that.

13                   COMMISSIONER MASSEY: I agree with everything you  
14 just said.

15                   CHAIRMAN WOOD: We will get ready if that's the  
16 right way to attack this. Any further questions or comments  
17 for Steve?

18                   (No response.)

19                   CHAIRMAN WOOD: Thank you for your efforts. We  
20 will continue to discuss this issue as days go forward.  
21 Anything else?

22                   (No response.)

23                   CHAIRMAN WOOD: Why don't we meet about 1:30.  
24 The Open Meeting is adjourned.

25                   (Whereupon, at 12:35 p.m., the open meeting of

## Federal Regulators Want Natural Gas Firms to Show Prices Are Reliable

*By David Ivanovich, Houston Chronicle -- Jan. 16*

Federal regulators Wednesday recommended that natural gas companies be barred from tying pipeline rates to published price indexes until they can show that the price data is more reliable.

Responding to revelations that gas traders repeatedly lied to trade publications that compile the price indexes, staffers at the Federal Energy Regulatory Commission called for minimum standards to ensure the accuracy of this information.

"The natural gas industry cannot function without accurate, dependable and trustworthy wholesale price information," the staff report said.

The report left it to the industry to find a way to reach that goal.

While the three-member commission took no action Wednesday on the staff recommendations, they may hold a conference to discuss the issue further.

"I haven't seen any substantive evaluation of the scope of the problem, the history of the problem or the impact of the problem," Commissioner Nora Mead Brownell said after the meeting. "I think we have a lot of work to do before we come to any solutions."

Jim Keener, a spokesman for Platts, whose trade publication Inside FERC Gas Market Report was allegedly provided false data, said he looks forward to reviewing "all ideas that improve openness in energy markets."

For years, the energy trade publications have polled traders to learn what gas is selling for in each market. In exchange for that information, the publications typically pledge not to reveal the identities of the traders or their firms.

The industry then uses these indexes to calculate prices under its contracts. Oil producers use them to evaluate assets. And regulators use them when approving tariffs on gas pipelines.

Federal regulators began looking into the price indexes issue last year as part of their probe into the power crisis. The FERC is expected to release a final report on that investigation by the end of March.

Already, five energy firms -- Houston-based Dynegy, Houston's El Paso Corp., AEP, Williams and CMS -- have revealed that their employees provided false data to the trade publications.

Last month, former El Paso energy trader Todd Geiger was charged with false reporting and fraud in connection with misreporting price data. On Monday, prosecutors alleged that other El Paso employees had participated in a bogus reporting conspiracy.

Commissioner William Massey raised concerns Wednesday that the problems evident in gas price reporting might be found in the electric power business as well. Agency officials are investigating that issue as well.

Producers such as Houston-based Apache Corp. say they are suffering collateral damage from the uproar over the price indexes, because the uncertainty is making it difficult for lenders to evaluate deals.

"It's a tough enough chore to run a commodity-based business, because commodities by their very nature have ups and downs in the price," noted Obie O'Brien, Apache's director of governmental affairs. "It's almost impossible when you have no confidence in the price whatsoever."

To try to restore confidence in the price indexes, agency staffers proposed developing some kind of system that would allow a third party to verify the reported pricing data. They also want to make sure the reported information provides an adequate sampling of a given market.

The staff members did not explain how these objectives might be accomplished, noting, "The industry must take the lead in solving this problem."

Platts has proposed that companies providing data for indexes have a senior executive certify the information. Rather than rely on traders, Platts would insist an energy firm's back office provide the data. And it would insist an energy company specify the companies involved and the time of a transaction.

Because of First Amendment protections, the FERC may have little direct authority over energy trade publications to force them to change their index reporting practices.

The staff recommendations take a less direct approach, essentially barring the indexes' use for regulatory purposes unless their accuracy is better assured.

Commission Chairman Pat Wood III said he has discussed the possibility of asking the U.S. Energy Information Administration to collect the pricing data, but EIA officials questioned whether they have the manpower.

O'Brien argues that the Energy Regulatory Commission itself should collect the data to ensure its accuracy.

STATE OF CALIFORNIA

SENATE SELECT COMMITTEE TO INVESTIGATE  
PRICE MANIPULATION OF THE WHOLESALE ENERGY MARKET

HEARING RE: NATURAL GAS INVESTIGATION UPDATE

STATE CAPITOL  
ROOM 112  
SACRAMENTO, CALIFORNIA

MONDAY, NOVEMBER 18, 2002

10:25 A.M.

Reported by:

Evelyn J. Mizak  
Shorthand Reporter

APPEARANCES

MEMBERS PRESENT

SENATOR JOSEPH DUNN, Chair  
SENATOR WES CHESBRO  
SENATOR K. MAURICE JOHANNESSEN

MEMBERS ABSENT

SENATOR DEBRA BOWEN  
SENATOR MARTHA ESCUTIA  
SENATOR BETTY KARNETTE  
SENATOR SHEILA KUEHL  
SENATOR WILLIAM MORROW, Vice Chair  
SENATOR BYRON SHER

STAFF PRESENT

IRMA MORALES, Committee Assistant  
LARRY DRIVON, Special Counsel to Committee  
ROBERT PRATT, Legislative Counsel  
CHRIS SCHREIBER, Consultant  
ALEXANDRA MONTGOMERY, Consultant  
RONDA PASCHAL, Consultant

ALSO PRESENT

SENATOR GLORIA ROMERO  
  
PAUL R. CARPENTER, Principal  
The Brattle Group  
Economic, Environmental & Management Counsel  
Cambridge, Massachusetts  
  
MATTHEW P. O'LOUGHLIN, Principal  
The Brattle Group  
Economic, Environmental & Management Counsel  
Cambridge, Massachusetts

iii

TRINA HORNER, Advisor to President LORETTA LYNCH  
California Public Utilities Commission

BILL JULIAN, Advisor to Commissioner CARL WOOD  
California Public Utilities Commission

MICHELE MARKEY, Director of Natural Gas  
Apache Corporation  
Houston, Texas

MATTHEW KIRTLAND, Attorney for Ms. Markey  
Fullbright and Jaworski

Proceedings .....	1
Opening Comments by CHAIRMAN DUNN .....	1
Procedural Issues .....	1
Possibility of Revisiting Perot Systems .....	2
ISO Issues ... ..	3
"The Lynch Report" .....	3
Continued Examination of Municipal Systems .....	3
Future Hearings .....	4
Establishment of Quorum .....	5
Panel I: Manipulation of Natural Gas Supply and Price, And Examination of Refund Case Pending at FERC by The Brattle Group, Cambridge, Massachusetts .....	5
PAUL R. CARPENTER, Principal The Brattle Group .....	5
MATTHEW P. O'LOUGHLIN, Principal The Brattle Group .....	5
Personal Backgrounds .....	6
Pending FERC Case Involving CPUC and El Paso Natural Gas and El Paso Merchant Energy .....	6
Outline of Intended Presentation .....	7
Supply Basins and Capacity into California .....	8
Terminology .....	11

v

Historical Comparison of Year 2000-2001 .....	11
Questions & Answers .....	14
Key Events Leading to Merchant Energy Natural Gas Contract with El Paso Pipeline ....	17
Questions & Answers .....	18
Dynegy Contract with El Paso Gas .....	22
Questions & Answers .....	23
Enron Contract with El Paso Gas .....	26
El Paso Gas's Purchase of All America Crude Oil Pipeline .....	28
El Paso Merchant Energy's Contract with El Paso Natural Gas .....	29
Questions & Answers .....	30
Presentation by El Paso Merchant to Bill Wise, CEO, El Paso Corporation in Violation of FERC Regulations .....	32
Minutes from Board of Directors Meeting from Head of Merchant to Wise, CEO of Corporation Showing Intent .....	35
Demonstration of Variable Cost and Basis Differential in Summer of 2000 .....	36
El Paso Pipeline Explosion at Carlsbad in August, 2000 .....	39
December, 2000 Peak Gas Prices .....	39
Questions & Answers .....	42
Nominations on the El Paso Pipeline under Merchant Energy's Contract .....	44
Questions & Answers .....	47

Merchant's Decision to Pull Capacity off the Pipeline in January, 2001 .....	49
Behavior of El Paso Natural Gas, the Pipeline .....	51
Claim of Capacity Constraint on Pipeline .....	53
El Paso's Reasons Why Capacity Was Not Available .....	55
Questions & Answers .....	55
El Paso's Awareness in January, 2000 that It Couldn't Not Meet Its California and East of California Commitments .....	57
June, 2000 Memo by Al Clark of El Paso re: Capturing East of California Power Plant Opportunities .....	58
Evidence of Intent to Exercise Market Power .....	59
El Paso's Handling of Line 2000 .....	59
Questions & Answers .....	62
Summary of Phase III of FERC Case with El Paso .....	64
Significant Capacity El Paso Did Not Make Available from December, 2000 through February, 2001 .....	65
Lack of Capacity on El Paso Pipeline .....	65
Chief Judge's Recent Decision .....	66
Harm to California .....	67
El Paso Merchant Energy's Profits .....	68
Questions & Answers .....	69
No Public Policy Reason for Imposition of Secrecy in FERC Proceedings .....	75

Lunch Recess .....	76
Afternoon Proceedings .....	77
Panel II: Gas Price Indexing and Its Importance	
BILL JULIAN, Advisor to Commissioner Wood California Public Utilities Commission .....	77
TRINA HORNER, Advisor to PRESIDENT Lynch California Public Utilities Commission .....	77
Personal Background and Introductions .....	78
Ways Natural Gas Prices and Indexes Compromise CPUC's Setting of Gas and Electricity Rates .....	79
PUC's Formula to Determine Reasonableness of Utilities' Gas Purchases .....	81
PUC's Use of Indexes to Set Electricity Rates .....	82
Questions & Answers .....	83
FERC's Reliance on Natural Gas Indices .....	87
Questions & Answers .....	87
Panel III: How Gas Price Indexes Were Created And Manipulated	
MATTHEW KIRTLAND, Attorney for MS. MARKEY Fullbright and Jaworski .....	90
Testimony of MICHELE MARKEY, Director of Natural Gas, Apache Corporation Houston, Texas .....	90
Objection by MR. KIRTLAND on Basis of Privilege against Self-Incrimination .....	91
CHAIRMAN DUNN's Confirmation of Immunities and Instruction to Witness to Answer Questions of Committee Pursuant to Government Code Section 9410 ...	92

Questions by CHAIRMAN DUNN re:

Background ..... 93

Prepared Presentation by MS. MARKEY ..... 94

Duties at Resource Data International ..... 94

Recess of Hearing ... ..	175
Certificate of Reporter .....	176

Gas-ii.txt  
13 [Thereupon the witness,  
14 MICHELE MARKEY, swore to  
15 tell the truth, the whole  
16 truth, and nothing but the  
17 truth.]  
18 CHAIRMAN DUNN: Counsel, for the record can you  
19 identify yourself as well.  
20 MR. KIRTLAND: Yes, Matthew Kirtland from  
21 Fullbright and Jaworski.  
22 CHAIRMAN DUNN: And, Mr. Kirtland, you're here  
23 representing Ms. Markey, I understand?  
24 MR. KIRTLAND: That's right.  
25 CHAIRMAN DUNN: If you would, Ms. Markey, can you  
26 please state and spell your name, and give us your business  
27 address.  
28 MS. MARKEY: Michele, M-i-c-h-e-l-e, Markey,  
0091  
01 M-a-r-k-e-y. My business address is 2000 South Post Oak  
02 Boulevard, Suite 100, Houston, Texas, 77056.  
03 CHAIRMAN DUNN: Ms. Markey, what I'd like to do,  
04 we want to cover some of the background, employment history, and  
05 other material. So, why don't I pose as a first question, if  
06 you could give us some of the history, educational and  
07 professional history, if you will, please.  
08 MR. KIRTLAND: At this time, Senator, as Ms.  
09 Markey's attorney, I'm going to instruct her to refuse to  
10 provide any testimony or further information to the Committee on  
11 the basis of her privilege against self-incrimination. That  
12 would include answering any further questions, or providing any  
13 documents to the Committee.  
14 CHAIRMAN DUNN: Counsel, just for clarification  
15 so we understand, your instruction to her, therefore, will apply  
16 to any further questions to her by this Committee?  
17 MR. KIRTLAND: Yes, or production of documents.  
18 CHAIRMAN DUNN: Ms. Markey, is it fair to assume  
19 that you intend to follow the instructions of your counsel?  
20 MS. MARKEY: Yes, I do.  
21 CHAIRMAN DUNN: As you're probably aware, we've  
22 had discussions with your counsel regarding this possibility,  
23 Ms. Markey.  
24 Under Government Code Section 9410, when a  
25 witness appears before a committee or a sub committee of this  
26 type that has a quorum present, I as the presiding officer, have  
27 the ability to compel that testimony, despite your claim of  
28 self-incrimination.  
0092  
01 But under that same Government Section, Code  
02 Section 9410, you are conferred as a result of my requiring you  
03 to testify certain immunities which your counsel is familiar  
04 with.  
05 So, with a quorum present here in our  
06 subcommittee, and with no objection from the Committee members,  
07 as presiding officer I hereby instruct you to answer those  
08 questions, and of course, confer upon you all of the rights  
09 identified in Section 9410.  
10 MS. MARKEY: Yes, sir.  
11 CHAIRMAN DUNN: It's my understanding, correct me  
12 if I'm wrong, you are here today as a result of a subpoena  
13 served upon you here in the State of California. Is that  
14 correct?  
15 MS. MARKEY: That is correct.  
16 CHAIRMAN DUNN: And as a result of that subpoena,  
17 which not only asks for your personal presence, but also for  
18 documents, do you have documents that you have brought with you  
19 today?

Gas-ii.txt

20 MS. MARKEY: Yes, we do.  
21 CHAIRMAN DUNN: If I may, Sergeant, if you'd give  
22 a copy of those to the Sergeant.  
23 Counsel, just so our record is clear, obviously,  
24 your instructions apply to every future question, and the same  
25 rights and responsibilities under Section 9410 apply to  
26 Ms. Markey as well for every future question here as we proceed  
27 forward.  
28 MR. KIRTLAND: Correct. The questions,  
0093  
01 testimony, documents, the presentation of the Power Point  
02 slides; correct.  
03 CHAIRMAN DUNN: Agreed counsel.  
04 MR. KIRTLAND: Just so you're clear as to what  
05 we've given you as documents responsive to the subpoena. There's  
06 a brief index on top of the documents, as well as copies of  
07 additional materials that will be part of the Power Point  
08 presentation.  
09 CHAIRMAN DUNN: All right.  
10 Why don't we begin, then, Ms. Markey, if I can,  
11 and return to the original question I asked before we started  
12 down this route.  
13 Can you give us a little bit of your background,  
14 education, and professional, starting with 1994?  
15 MS. MARKEY: In 1994, I was working as a fuel  
16 buyer for Nevada Power. In 1996 to '97, I worked for a fuel  
17 buyer as well as transportation capacity specialist for  
18 Washington Natural Gas, which is now Puget Sound Energy.  
19 In 1997 to 1998, I worked as a West Desk trader  
20 for Reliant Energy Services, although at the time it was known  
21 as Noram Energy Services.  
22 CHAIRMAN DUNN: I'm sorry. It was known as --  
23 MS. MARKEY: Noram Energy Services.  
24 CHAIRMAN DUNN: Can you spell that for us?  
25 MS. MARKEY: N-o-r-a-m.  
26 And then in 1998, I went to a company by the name  
27 of Resource Data International, which was a division of the  
28 Financial Times, and was responsible for data base management  
0094  
01 for gas industry information.  
02 In March of 2002, this year, I left the  
03 organization for personal reasons, and then ultimately ended up  
04 becoming a consultant for two months, working for Apache  
05 Corporation. In June of this year, I became the Director of  
06 Natural Gas for Apache Corporation.  
07 CHAIRMAN DUNN: Ms. Markey, it's my  
08 understanding, given the comments of Counsel, that you have a  
09 prepared presentation for the Committee today; is that correct?  
10 MS. MARKEY: Yes, I do.  
11 CHAIRMAN DUNN: Why don't we go right into your  
12 prepared presentation.  
13 MS. MARKEY: Happy to.  
14 CHAIRMAN DUNN: And as you may have been sitting  
15 through some of the other witnesses, speak right into the mike,  
16 because that way everyone's going to hear you.  
17 MS. MARKEY: I'll put it right next to my mouth.  
18 CHAIRMAN DUNN: Perfect.  
19 MS. MARKEY: I'm going to open up actually two  
20 presentations, ones that you've given out to everyone today, in  
21 addition to some of the documents that were created from the  
22 information that you've been provided just a few minutes ago.  
23 CHAIRMAN DUNN: Before you begin.  
24 MR. DRIVON: Before you begin, you indicated that  
25 for a period of time you were with Resource Data International.  
26 MS. MARKEY: Correct.

Gas-ii.txt

27 MR. DRIVON: What were your duties there?  
28 MS. MARKEY: Originally I was hired to create a  
0095  
01 data base of natural gas industry information. After May of  
02 1998, when the company acquired Pasha Publications, which  
03 included Gas Daily and Megawatt Daily, I was put in charge of  
04 the gas price and electric price teams that gathered information  
05 from the industry.  
06 MR. DRIVON: And this information that was  
07 gathered from the industry and accumulated there, you were in  
08 charge of the groups that did that for both gas and electricity?  
09 MS. MARKEY: That is correct.  
10 MR. DRIVON: And these data that were gathered,  
11 as I understand it, were then accumulated, indexed and published  
12 in the publications Gas Daily and Megawatt Daily, made available  
13 to the industry and everyone else?  
14 MS. MARKEY: Well, if you had a subscription,  
15 that's how you received it.  
16 MR. DRIVON: Right. You could get a  
17 subscription, and then you would get these publications.  
18 MS. MARKEY: That is correct.  
19 MR. DRIVON: And I think I saw you here in the  
20 audience when the PUC people were testifying a few minutes  
21 ago.  
22 MS. MARKEY: That is correct.  
23 MR. DRIVON: And a number of references have been  
24 made to price indexes. Did you hear them talk about that?  
25 MS. MARKEY: Yes, I did.  
26 MR. DRIVON: And if I understand it correctly,  
27 Ms. Markey, your job was to accumulate, assimilate, catalogue  
28 and index those price data, which were then published as the  
0096  
01 very indexes that the PUC people were talking about; correct?  
02 MS. MARKEY: The price reporters who reported to  
03 me acted in that function, but I managed the group.  
04 MR. DRIVON: All right. And it was the very data  
05 that you were managing, or the group that you were managing that  
06 produced this data, that were then published, that provided the  
07 indexes that set all of these price points and various reference  
08 points that the PUC folks were talking about a minute ago;  
09 correct?  
10 MS. MARKEY: That is correct.  
11 MR. DRIVON: That was your job, and you were  
12 sitting right there in the middle of it?  
13 MS. MARKEY: Yes, I was.  
14 MR. DRIVON: Thank you.  
15 CHAIRMAN DUNN: Please proceed, Ms. Markey.  
16 MS. MARKEY: This is a presentation that I gave  
17 for a group by the name of TIPROA, Texas Independent Producers  
18 and Royalty Owners Association, in June of this year. And what  
19 it was -- and I'm going to switch over to a slide presentation  
20 so you can see this easier.  
21 I actually gave the history of the price survey.  
22 I actually walked through the processes that were involved. And  
23 I thought I could just start doing that for y'all as well in the  
24 same way that I did for the TIPROA Convention.  
25 CHAIRMAN DUNN: Please.  
26 MS. MARKEY: We started out with the history of  
27 the price survey, and both Inside FERC -- by the way, Inside  
28 FERC is a Platts publication, and Gas Daily was acquired by  
0097  
01 Platts in August of 2001.  
02 Originally, when both publications formed in  
03 1985, they were originally only to report physical monthly firm  
04 transactions. As more trading companies came into the business,

Gas-ii.txt

05 we created daily weighted averages, which ultimately became the  
06 standard method of reporting swing gas as well as establishing  
07 what the spot market value of gas should be.

08 From these, quite a number of financial  
09 instruments were created, such as Gas Daily versus Inside FERC  
10 basis swaps, or Gas Data Chicago versus Henry Hub basis swaps.

11 This map actually shows all the various  
12 different locations where you could actually price gas. At the  
13 time that this map was created back in June, there were  
14 approximately 115 Gas Daily pricing points, including four in  
15 the state of California, which would be Malin, PG&E's Citygate,  
16 PG&E large packages, and PG&E large packages [sic].

17 I actually went into two different breakouts  
18 about how a monthly baseload price would be established, as well  
19 as how a Gas Daily daily price would be established. The  
20 monthly average index, I think in earlier testimony I believe  
21 The Brattle Group indicated that 50 percent of baseload gas was  
22 based on indices, whereas 50 percent of gas was based on a daily  
23 spot market price.

24 This procedure here actually describes how the  
25 monthly baseload was created, and survey participants were  
26 roughly 50 percent marketers, 25 percent producers, and  
27 approximately 25 percent utilities and end users.

28 The sample size, frankly, is smaller than what --

0098

01 CHAIRMAN DUNN: If I may, Ms. Markey, and our  
02 pardons as we interrupt you along the process.

03 MS. MARKEY: That's quite all right.

04 CHAIRMAN DUNN: We're trying to gain an  
05 understanding here as well, too. I just want to make sure  
06 everybody is understanding.

07 You say 50 percent are marketers. Give us some  
08 representative examples of who those marketers applies to.

09 MS. MARKEY: Enron, Duke, Reliant, El Paso  
10 Mirant, AEP, Williams.

11 CHAIRMAN DUNN: And producers?

12 MS. MARKEY: Producers such as Conoco, Unidelco,  
13 Burlington.

14 CHAIRMAN DUNN: And utilities and end users, just  
15 again, representative samples?

16 MS. MARKEY: Again, SoCal Gas might be one, InTex  
17 in Houston, some of the other independents -- excuse me, other  
18 utilities. It just depended on who wanted to talk to us that  
19 day.

20 CHAIRMAN DUNN: Thank you.

21 MS. MARKEY: Inside FERC, as opposed to Gas  
22 Daily -- by the way, there were two monthly indexes at the  
23 time. There was a Gas Daily monthly index and an Inside FERC  
24 index.

25 When we were acquired by Platts, Inside FERC made  
26 a note that they did archive all their transactions from the  
27 inception of when they started collecting prices. That was not  
28 the case for Gas Daily.

0099

01 And all transactions are reported in aggregated  
02 volumes rather than their individual trades. And counterparties  
03 are rarely given.

04 MR. DRIVON: Let me nail something down.

05 What you're telling me is the that you have  
06 direct information that Inside FERC actually archived their  
07 information, and at least when you last knew, had that  
08 information available; correct?

09 MS. MARKEY: That is correct.

10 The daily spot market basis was a little  
11 different, in that there were many more points that were

Gas-ii.txt

12 collected on a daily basis, and the volumes were substantially  
13 greater than what you normally would see in a monthly baseload.

14 Marketers actually played a much larger portion  
15 in reporting, anywhere from between 60 to 80 percent of all  
16 their transactions at certain locations.

17 One of the things about the daily transactions is  
18 that it would include both purchases and sales. There was no  
19 distinction made between one or the other, and often both were  
20 included.

21 Again, there were no party -- counterparties to  
22 the transactions.

23 Price reporters were or did have the authority to  
24 investigate and call all questionable transactions if  
25 necessary.

26 This next slide actually shows three different  
27 particular pricing points. I'll actually have an overlay of  
28 each specific point in California. But this actually is showing

0100  
01 the volume growth in selected Gas Daily points for how much  
02 volume was reported to Gas Daily.

03 Gas Daily began collecting volumes in 1999, and  
04 as you can see by the chart, as you get into the 2000-2001  
05 period, volumes for various different points escalated  
06 tremendously.

07 MR. DRIVON: I saw this graph earlier. Let's see  
08 if we can get it identified so that folks out there will know  
09 what we're talking about.

10 MS. MARKEY: It says "Daily Average Reported  
11 Volumes for Selected Gas Daily Points." Yes, that's the one.

12 MR. DRIVON: What I was wondering when I saw this  
13 chart was, over here on this side of the chart?

14 MS. MARKEY: Yes.

15 MR. DRIVON: You've got good eyes? I mean,  
16 that's a long way.

17 MS. MARKEY: I've got one right here in front of  
18 me.

19 MR. DRIVON: Up until, oh, somewhere around April  
20 or May of 2000, the reported volumes are kind of steady across  
21 here.

22 MS. MARKEY: That's correct.

23 MR. DRIVON: And this is gas that's being  
24 supplied and presumably used by somebody who's, like, heating  
25 their house, or creating electricity, or something?

26 MS. MARKEY: Most of the volume at the time that  
27 I was aware of was supposed to represent physical spot  
28 transactions.

0101  
01 MR. DRIVON: Then it all goes way up.

02 MS. MARKEY: Correct.

03 MR. DRIVON: Does this mean that -- does this  
04 represent people around the country turning up their thermostat?

05 It looks to me like if everybody was happy when  
06 we were down here, and then it took this much volume of gas to  
07 make everybody happy, were they baking potatoes on their coffee  
08 table? Or how high did they have to have their thermostat in  
09 order to need that much electricity or gas?

10 MS. MARKEY: This volume was actually -- only  
11 represented the volumes that were reported to Gas Daily as  
12 volumes traded, not necessarily usage.

13 MR. DRIVON: So, this just represents what  
14 appears to be a very big increase in the trading of natural gas,  
15 not the actual production, supply, or usage of natural gas?

16 MS. MARKEY: That is correct.

17 MR. DRIVON: We'll leave the rest of the  
18 questions for awhile.

Gas-ii.txt

19 MS. MARKEY: The next slide, and I won't get into  
20 too much explanation. This is just kind of a representative  
21 trade floor, and how the various different groups were broken  
22 up. And at the core was your Risk Management Group, where most  
23 information flowed in and out of in order to keep track of daily  
24 trades, daily transactions, market-to-market, accounting,  
25 invoicing.

26 But you can see the various different types of  
27 groups that would feed information on through and past the Risk  
28 Management Groups.

0102

01 This is just a description of a typical trade day  
02 on the floor. The trading day in Houston typically starts  
03 between 6:30 and 7:30 in the morning. Traders would normally  
04 come into the office and review their Gas Daily prices, weather  
05 reports, and determine what their open positions were for any  
06 imbalance from the day before.

07 Approximately about towards from, what I've been  
08 told, right around 2000, quite a number of traders also would  
09 use Enron On Line as their starting point as to what the market  
10 showed for bid asked for various different points in the market.

11 About the time I left Reliant, instant messaging  
12 was also a form of communication as to what was going on in the  
13 market. So, people could flip information back as forth very  
14 quickly about what they heard as far as prices, or what kind of  
15 deals were transacted during that particular time of the  
16 morning.

17 By the -- about 8:00 o'clock, after the trade  
18 floor would have its group meeting to talk about various things  
19 in the market and what the overall company position was, you'd  
20 immediately begin trading, which would go until about 9:00 or  
21 9:30.

22 Now, this was based on when I was a trader, but  
23 typically most traders were doing anywhere between 5 and 20  
24 deals during that particular period of time, primarily either  
25 through the instant messaging, or being on the phone. If there  
26 were any particular paper trades, you would go ahead and net  
27 those out. Paper trades meaning trades that were never intended  
28 to physically flow; they were just netted financial instruments

0103

01 to either book profit or book loss.

02 Then any physical trades that were done that had  
03 to be scheduled were then passed on to a scheduler, who would  
04 then have to get them into the pipeline bulletin boards for them  
05 to be scheduled. I think you heard earlier The Brattle Group  
06 refer to it as making nominations.

07 And then any hedges that had to be done at that  
08 particular time were normally conducted by the Structures Desk  
09 or by the Risk Management Group, either by selling futures or by  
10 selling OTC financials.

11 This was -- I'm sorry.

12 CHAIRMAN DUNN: Senator Johannessen.

13 SENATOR JOHANNESSEN: I'm sorry to interrupt you.

14 So basically, all this was done as a commodity  
15 market. That's basically what this was. It was treated as a  
16 commodity market.

17 MS. MARKEY: Yes, sir.

18 SENATOR JOHANNESSEN: You were trading like it  
19 would be a commodity market.

20 MS. MARKEY: Yes, sir.

21 SENATOR JOHANNESSEN: And this is something that  
22 apparently hadn't happened before, or on a much smaller scale?

23 MS. MARKEY: I believe that starting in the early  
24 '90s, when the New York Mercantile Exchange created the Henry  
25 Hub NYMEX contract, that that's approximately the time you can

Gas-ii.txt  
26 say that the natural gas markets began to act like a commodity,  
27 and it escalated throughout the '90s into 2000.  
28 SENATOR JOHANNESSEN: And the relationships  
0104  
01 between the various players in this commodity market, there was  
02 no control over who had the ability, legal ability, to inform  
03 the various partners in this consortium, if you will, in the  
04 commodity market what to do, when to do it, how to do it, and  
05 what potential benefit there would be to do it.  
06 MS. MARKEY: I'm sorry, Senator. I don't think I  
07 understand your question. I'm sorry.  
08 SENATOR JOHANNESSEN: I'm trying to figure out  
09 why all these spikes took place.  
10 MS. MARKEY: Yes, sir.  
11 SENATOR JOHANNESSEN: We have heard testimony  
12 that some of these things was information that was internal; it  
13 should not be out because of contractual agreements and so  
14 forth.  
15 Did anyone pay attention to this kind of a thing  
16 when you made all these calls, and contacts, and market  
17 analysis, if you will, in deciding what the price should be on  
18 any given day?  
19 MS. MARKEY: During the time I was a trader, we  
20 would certainly be on the phone with other traders and passing  
21 along market intelligence, whether it was truthful or not. We  
22 would certainly rely on each other's discussions about the  
23 market, and where we thought the market was going. And you  
24 certainly conducted all your market intelligence via the phone  
25 or instant messages if that's what you're referring to.  
26 SENATOR JOHANNESSEN: Right. Thank you. I think  
27 I understand that one.  
28 CHAIRMAN DUNN: Let me, if I can, interrupt, Ms.  
0105  
01 Markey, just as a follow-up to Senator Johannessen's comments.  
02 Given what you just responded, in your opinion is  
03 it common practice for the traders to exaggerate the prices when  
04 reporting to the indices?  
05 MS. MARKEY: It was common industry knowledge  
06 that exaggeration was an accepted practice.  
07 CHAIRMAN DUNN: Do you have an opinion on how  
08 common it probably was?  
09 MS. MARKEY: In all my discussions with any other  
10 traders where this topic has come up, no one acted shocked over  
11 the topic. It was discussed.  
12 CHAIRMAN DUNN: Okay.  
13 MS. MARKEY: This next example is just basically  
14 a very plain vanilla walk-through of how typically a company  
15 would trade with another company or companies, and then how it  
16 would end up reporting the transactions to Gas Daily. And  
17 again, we're talking about the period that would normally occur  
18 from about 7:00 or 8:00 in the morning until about 9:30 in the  
19 morning.  
20 So, you have a trader for one company goes and  
21 buys 25,000 MMBtu from another company at \$4.30 at a particular  
22 major trading hub. That company would then turn around and sell  
23 it to Company C for \$4.40 and book a profit. And typically,  
24 this was what was referred to in the trade as a paper trade,  
25 because you never you never intended to schedule this.  
26 Finally, Company A may buy back, or goes out and  
27 buys 55,000 a day at \$4.35 to cover a short position. Typically  
28 the short position was created by some kind of hedge or  
0106  
01 financial instrument. For instance, one of the more popular  
02 types of trades that were done is to sell what's known as a GDA,  
03 or a Gas Daily Average. A lot of the utilities like to buy

Gas-ii.txt

04 these types; industrials like to buy these types of trades.  
05 They also like to buy a lot on the index. I think we heard that  
06 earlier from the CPUC.

07 So, the trader may sell short. In other words,  
08 he may sell gas to the utility or to the industrial that he  
09 doesn't necessarily have, but he's going to buy that gas back  
10 every day at a fixed price, and it's going to be then delivered  
11 against that short-sale index sale made to either the utility or  
12 to the industrial.

13 MR. DRIVON: Wait a minute now.  
14 You're talking about establishing a tradeable  
15 derivative that is the Gas Daily index. Is that what you just  
16 said? In other words, some folks would buy and sell the index?

17 MS. MARKEY: Yes, that's correct.  
18 MR. DRIVON: So then, that would be one type of  
19 derivative product that might be used as a traded commodity?

20 MS. MARKEY: That is correct.  
21 MR. DRIVON: And that particular commodity, the  
22 value of that particular commodity, by its definition, was  
23 defined by the same publication that reported prices where  
24 exaggeration was an accepted practice; is that right?

25 MS. MARKEY: The Gas Daily index was a collection  
26 from various different marketers who may have sold on a Gas  
27 Daily index value, or bought on a Gas Daily index value.

28 MR. DRIVON: And reported those sales or  
0107 purchases?

02 MS. MARKEY: That is correct.

03 MR. DRIVON: At a value that may have been  
04 accurate or, as you testified a few minutes ago, was commonly  
05 inflated?

06 MS. MARKEY: That is correct.  
07 MR. DRIVON: And if someone was trading that  
08 particular derivative commodity, and that same entity was  
09 involved in reporting sales and purchases, then the reported  
10 sales and purchases could easily be used to manipulate the very  
11 index that they were trading as a derivative; correct?

12 MS. MARKEY: That is possible, yes.  
13 MR. DRIVON: So by trading these derivatives and  
14 reporting the prices, these folks could just sort of decide how  
15 much money they wanted to make, and then just manipulate it  
16 around so they made it. Does that follow?

17 MS. MARKEY: Well, I would say that if they  
18 reported prices that were extremely out of the money, meaning  
19 out of the price range, that it would be called into question by  
20 the price reporter. It was supposed to be called into question  
21 by the price reporter.

22 So, you didn't want to appear too far out if you  
23 reported a transaction. But it is possible for a company to  
24 have reported a volume and a price that was within a given price  
25 range for the day that could influence what the index would have  
26 been for next day when the index came -- was published.

27 MR. DRIVON: Because it's a weighted average.

28 MS. MARKEY: Yes, it is a weighted average.  
0108

01 MR. DRIVON: So, two ways to manipulate that  
02 average. One would be, you just say it cost more, or you paid  
03 more than you actually did.

04 MS. MARKEY: You could do that.  
05 MR. DRIVON: The other way to do it, because it's  
06 a weighted average, would be to just say you either bought or  
07 sold a whole lot more than you really bought or sold.

08 MS. MARKEY: That is possible.

09 MR. DRIVON: And not only is that possible, but I  
10 think as your testimony goes on today, you intend to illustrate

Gas-ii.txt

11 and document exactly that happening. Isn't that true?  
12 MS. MARKEY: I'll show an instance -- several  
13 instances where I think it might have happened, yes.  
14 MR. DRIVON: Thank you.  
15 MS. MARKEY: Continuing on with the example,  
16 this particular company would have added all the volume of the  
17 various transactions up and created a weighted average, and then  
18 reported that average to Gas Daily.  
19 And reporting took place in several different  
20 ways, either by phone conversation, by fax, or by e-mail.  
21 And if you looked at all the transactions  
22 reported by other companies, you can see, a third down, the --  
23 in this particular example, the company that traded, and their  
24 volume reported, and how it would become averaged in to create  
25 the weighted average midpoint that was then published in the  
26 following day's publication for Gas Daily.  
27 These are basically the various ways that you  
28 were just alluding to, how trades might be reported, and any  
0109 type of differences they may report in order to change the  
02 index.  
03 Common practice was to exaggerate your  
04 transactions to the price reporters, report more volume, report  
05 a higher price than that was actually transacted. You stretched  
06 your price in favor of what the company's position was, or don't  
07 report at all, because you would know whether or not your  
08 indices -- your volumes and price could in fact affect the  
09 index.  
10 Finally, transactions that were originally done  
11 at hedges -- as hedges at special prices could be considered  
12 part of the normal spot market activity done that day.  
13 Typically that should not have been included, but it was  
14 possible that people could have.  
15 CHAIRMAN DUNN: Ms. Markey, I want to interrupt  
16 with a few questions at this point. I want to zero in on that  
17 slide that we just did on "How Well Do Trades Get Reported."  
18 MS. MARKEY: Yes.  
19 CHAIRMAN DUNN: Again, I know you are intimately  
20 familiar with how all of this operates. Most of the rest of us  
21 are not.  
22 MS. MARKEY: Yes.  
23 CHAIRMAN DUNN: And so, I want to ask some  
24 questions that may seem kind of basic from your perspective, and  
25 my apologies --  
26 MS. MARKEY: Sure.  
27 CHAIRMAN DUNN: -- but we want to make sure we  
28 have a full understanding.  
0110 Can you explain in as lay terms as possible how  
02 was it a trader could exaggerate transactions to manipulate the  
03 index? How could they do that?  
04 MS. MARKEY: well, you never knew exactly how  
05 much you were going to affect the market. Most of the time you  
06 would trade a volume. And let's say it was 100,000 MMBtus at  
07 \$2. You might report double that volume, 200,000 MMBtus at \$4.  
08 You could, instead of reporting \$2, you could say,  
09 well, I'm going to report -- you've heard what the price range  
10 is for the day, and you know it's between 1.95 and 2.10. And  
11 depending on what your position is, you report either the lower  
12 end or the higher end as the price that you did your  
13 transactions at rather than the actual price.  
14 CHAIRMAN DUNN: when you say, "depending upon  
15 your position," what do you mean by that?  
16 MS. MARKEY: well, depending on whether you're  
17 long or short the Gas Daily average, or the inside FERC average,

Gas-ii.txt

18 because what you to do is, is you want to, the next morning,  
19 make sure that your market-to-market position based on whatever  
20 the index comes out is, is in your favor.

21 CHAIRMAN DUNN: So, if I'm long, what would I  
22 like to see the next morning?

23 MS. MARKEY: I would like to see higher prices.  
24 CHAIRMAN DUNN: And if I'm short?  
25 MS. MARKEY: You'd like to see lower prices.  
26 CHAIRMAN DUNN: So, what you're saying is that a  
27 trader could exaggerate, either inflated or deflated, its  
28 reporting to the indices which could affect that average price?

0111

01 MS. MARKEY: That is correct.  
02 CHAIRMAN DUNN: And can you give us other  
03 examples of exaggerations? I know you touched upon some, but  
04 any others that you could share with us, again, for us to come  
05 to an understanding?

06 MS. MARKEY: If you didn't like where the market  
07 went that day, and you know your volumes are significant, and  
08 you don't want to influence the market adversely in your favor,  
09 you just won't report.  
10 Or, you'll look at your day's volume, and you  
11 selectively pick out trades that would be more like in your  
12 favor so that you could say that, yes, now I've reported volumes  
13 and prices that in fact I did trade at, but you didn't include  
14 all of them.

15 CHAIRMAN DUNN: While at Gas Daily, were you  
16 aware of any complaints regarding the accuracy of the daily  
17 index?

18 MS. MARKEY: Yes, I was.  
19 CHAIRMAN DUNN: What type of entities were making  
20 these complaints?

21 MS. MARKEY: Actually it was various. Primarily  
22 a lot of the end users would come to us.  
23 Primarily during the fourth quarter of 2000 and  
24 2001, we did have a number of end users complain, but we also  
25 had a lot of marketing companies complain.  
26 CHAIRMAN DUNN: Can you give us some examples of  
27 who you're referring to when you say end users that would have  
28 complained?

0112

01 MS. MARKEY: There were end users such as  
02 utilities, a couple of the industrials called. I don't recall  
03 specifically right off the top of my head who they were, but the  
04 utilities were primarily the ones who called fairly -- fairly  
05 regularly.

06 CHAIRMAN DUNN: And if I understand what you  
07 said, the last quarter 2000 and early 2001 were a time of heavy  
08 complaints; is that fair?

09 MS. MARKEY: That's a fair statement.  
10 CHAIRMAN DUNN: And can you tell us, what would  
11 they be saying in their complaints?

12 MS. MARKEY: Well, we received a complaint from  
13 one company that, in early January, that said that your prices  
14 were outrageously high. There's no way that the market could  
15 have traded that, and we really want you guys to go back and  
16 investigate who the larger players were, and how those high  
17 prices were actually traded.

18 CHAIRMAN DUNN: Did Gas Daily do anything about  
19 those complaints?

20 MS. MARKEY: We contacted the companies in  
21 question and demanded to see their individual transactions.  
22 CHAIRMAN DUNN: Would they produce those  
23 individual transactions to Gas Daily?  
24 MS. MARKEY: No, they didn't.

Gas-ii.txt

25 CHAIRMAN DUNN: Was there any additional  
26 follow-up, other than a request for the individual data that was  
27 not complied with? Was there any further follow-up by Gas  
28 Daily?  
0113  
01 MS. MARKEY: No.  
02 MR. DRIVON: In that regard, ma'am, as I  
03 understand it, or as I have at least heard, there was some  
04 movement toward performing an audit on that information at this  
05 point; is that correct?  
06 MS. MARKEY: Yes.  
07 MR. DRIVON: And this would have been an audit  
08 that would have investigated the accuracy of the very pricing  
09 information that you're talking about; correct?  
10 MS. MARKEY: That is correct.  
11 MR. DRIVON: And if I understand it correctly,  
12 you were a proponent of that audit; is that correct?  
13 MS. MARKEY: Yes, I was.  
14 MR. DRIVON: You were trying to do your best to  
15 get that issue resolved.  
16 MS. MARKEY: Yes, I was.  
17 MR. DRIVON: And at that time, did you understand  
18 by reason of your position and background what the impact was if  
19 those price reports and indexes were wrong?  
20 MS. MARKEY: Yes, I did.  
21 MR. DRIVON: And that was part of your motivation  
22 for pushing for this audit; isn't that true?  
23 MS. MARKEY: That is correct.  
24 MR. DRIVON: If I understand it correctly, an  
25 audit -- a profile and procedure was drawn up; correct?  
26 MS. MARKEY: That is correct.  
27 MR. DRIVON: And an auditor was chosen?  
28 MS. MARKEY: Yes.  
0114  
01 MR. DRIVON: That auditor was Price-Waterhouse-  
02 Cooper?  
03 MS. MARKEY: That is correct.  
04 MR. DRIVON: And contracts, preliminary  
05 contracts, were formed and drawn to have that audit done; isn't  
06 that true?  
07 MS. MARKEY: Yes.  
08 MR. DRIVON: And then, before that audit could be  
09 instituted and started, there was a change in the ownership of  
10 the publication; is that correct?  
11 MS. MARKEY: That is correct.  
12 MR. DRIVON: And if I understand it correctly,  
13 the prior ownership, or ownership up until that change, had been  
14 supportive of your idea that an audit should be done; isn't that  
15 true?  
16 MS. MARKEY: That is correct.  
17 MR. DRIVON: And the change in ownership occurred  
18 when?  
19 MS. MARKEY: August, 2001.  
20 MR. DRIVON: August of 2001. And when that  
21 change in ownership took place, what, if anything, happened with  
22 respect to that audit?  
23 MS. MARKEY: Nothing happened.  
24 MR. DRIVON: Was the audit carried out?  
25 MS. MARKEY: No, it wasn't.  
26 MR. DRIVON: Were the contracts cancelled?  
27 MS. MARKEY: They were never followed through on.  
28 MR. DRIVON: They were never signed?  
0115  
01 MS. MARKEY: That is correct.  
02 MR. DRIVON: So, the audit in effect, as of the

Gas-ii.txt

03 time that ownership of the publication changed, was just  
04 quashed; is that correct?  
05 MS. MARKEY: It never went through.  
06 MR. DRIVON: Yeah. And at that time, one of the  
07 primary suspects with respect to improper reporting was Enron,  
08 and particularly its on-line operation; isn't that true?  
09 MS. MARKEY: Enron On Line was the party we were  
10 going to audit, yes.  
11 MR. DRIVON: And the publication was purchased by  
12 the same group that owns Inside FERC; correct?  
13 MS. MARKEY: That is correct.  
14 MR. DRIVON: Thereby consolidating the reportable  
15 indexing of these prices under that single ownership; correct?  
16 MS. MARKEY: Correct.  
17 MR. DRIVON: And would you please tell us,  
18 please, who the number one customer for their services was at  
19 that time when you were about to investigate Enron's price  
20 reporting?  
21 MS. MARKEY: Enron.  
22 CHAIRMAN DUNN: Please continue.  
23 MS. MARKEY: This is an example, again, when I  
24 gave the presentation, I didn't specify what this location was  
25 nor the date, but this happens to be a SoCal Gas large packages  
26 location, which y'all commonly refer to as Topock.  
27 And what I did was, and I believe it was for  
28 May 5th, 2001. What this chart represents for every single  
0116  
01 price point, it delineates each company total transaction  
02 volumes reported for that price.  
03 And you can see there's a fair number of volumes  
04 reported, of which there is one very large transaction of about  
05 905,000 MMBtus at \$12.30. On that particular day, the total  
06 volume reported at SoCal Gas packages at Topock was 2.66 bcf, so  
07 it's roughly a third of the volume that was reported at that  
08 particular location for that day.  
09 The Daily Midpoint with the volume included in  
10 there was \$12.385.  
11 If you go to the next slide, and you remove that  
12 transaction, you would see that the value would have gone from  
13 \$12.385 to a midpoint of \$12.43. Again, this would have -- the  
14 original midpoint would have benefitted somebody who was  
15 actually short in the market.  
16 MR. DRIVON: That would have benefitted them by  
17 what, five cents?  
18 MS. MARKEY: By five cents.  
19 MR. DRIVON: I mean, five cents.  
20 MS. MARKEY: Doesn't sound like much, unless  
21 you're a trader. And if you calculate out, somebody who has a  
22 substantial position --  
23 MR. DRIVON: Five cents over the volumes that  
24 we're talking about on a yearly basis would be what, about \$28  
25 million?  
26 MS. MARKEY: Yes, I believe that's what we have  
27 on our next slide.  
28 So, if you consistently reported, over or under  
0117  
01 reported by a nickel at one single price point, with a volume  
02 that was consistently traded at that location, the annual change  
03 in value would have been \$28 million.  
04 MR. DRIVON: But, of course, that's only one of  
05 115 natural gas spot market price points; correct?  
06 MS. MARKEY: That's correct.  
07 MR. DRIVON: So, if the over and under reporting  
08 and misreporting averaged a nickel --  
09 MS. MARKEY: Right.

Gas-ii.txt

10 MR. DRIVON: We would multiply the 28 million,  
11 and it occurred in all the price points, we made that  
12 assumption, what we would be that talking about would be  
13 somewhere around \$3.46 billion a year?  
14 MS. MARKEY: Very possible. And I've actually  
15 got several examples of other price points.  
16 MR. DRIVON: That's \$3.64 billion a year for a  
17 nickel; right?  
18 MS. MARKEY: Yes.  
19 MR. DRIVON: Now, if we got it up to a dime, we'd  
20 be talking about real money.  
21 [Laughter.]  
22 MS. MARKEY: Since you gentlemen now have the  
23 other slides, I thought I'd just show you some of the other  
24 price points, including some other examples of Southern  
25 California and PG&E's. So, if you'll flip over to the other  
26 Power Point presentation, which these gentlemen don't have.  
27 So what this is, is just various different  
28 examples. Right off the bat, and I apologize that this is so  
0118 difficult to see, but this is a SoCal Gas large packages volumes  
01 and prices, 1999 through 2002.  
02  
03 Common economy theory would say that as more  
04 volume increases or is reported as time goes on, that the price  
05 actually flattens. This particular slide actually disproves  
06 that theory, and that is, more volume was reported on SoCal Gas  
07 large packages. In fact, volumes actually caused the price, or  
08 it looks like it caused the price to spike on a regular basis.  
09 I'm just going to run through these briefly. I  
10 have a number of examples.  
11 MR. DRIVON: Hold on. Before you do this brief  
12 part, can we go back to the last slide?  
13 MS. MARKEY: This one right here?  
14 MR. DRIVON: That one.  
15 I remember someone was saying this morning, you  
16 might have looked at this chart here. This is a chart about  
17 what was happening with price, and then there's another chart  
18 about what was happening with pipeline capacity being withheld.  
19 Do you remember some of that testimony this  
20 morning?  
21 MS. MARKEY: Yes, I do.  
22 MR. DRIVON: I was just looking at this, and at  
23 the time when the highest volumes of gas trading were taking  
24 place --  
25 MS. MARKEY: Yes.  
26 MR. DRIVON: I mean, is it fair to say that these  
27 trading volumes that we see here are historically unique? I  
28 mean, we never saw that sort of thing before.  
0119  
01 MS. MARKEY: No, we didn't.  
02 MR. DRIVON: And these prices that these fellows  
03 were talking about, were historically unique as far as we know;  
04 right?  
05 MS. MARKEY: Yes, that's correct.  
06 MR. DRIVON: And although they claim -- these  
07 fellows that were trading all of this gas claimed that they were  
08 trading a whole bunch of gas at exactly the same time, we're  
09 seeing historic amounts of pipeline capacity withheld and  
10 historic prices; correct?  
11 MS. MARKEY: Correct.  
12 MR. DRIVON: So, how come there was so much being  
13 traded and so little being delivered?  
14 MS. MARKEY: I don't have an absolute easy answer  
15 or an answer that I know, but I could speculate that there's a  
16 lot of turning of paper going on at this time.

Gas-ii.txt

17 MR. DRIVON: People buying and selling paper and  
18 not gas, and shipping air and not gas, and collecting money for  
19 doing it.  
20 MS. MARKEY: That's correct.  
21 MR. DRIVON: That happened more in California  
22 than any place else in terms of how much it cost folks out of  
23 their pocket; right?  
24 MS. MARKEY: That is correct.  
25 MR. DRIVON: And smack in the middle of all of  
26 this were the very same folks who were not only involved with  
27 trading this paper, but were also involved with generating  
28 electricity in California.  
0120  
01 MS. MARKEY: Many of the same players were one  
02 and the same.  
03 MR. DRIVON: Thank you.  
04 MS. MARKEY: This is June 19th, 2001, where  
05 there's one single -- excuse me.  
06 CHAIRMAN DUNN: Sorry to interrupt you. Chris  
07 had a quick question for you.  
08 MS. MARKEY: Sorry, Chris.  
09 MR. SCHREIBER: I just wanted to touch on  
10 something that you said there.  
11 You mentioned that intuitively as volumes rose,  
12 price volatility would be dampened?  
13 It's difficult to see on this chart, but I just  
14 want to make clear here that what you're saying is that there's  
15 a inverse relationship between price volatility and volume, so  
16 that typically, the more volume you see, the less price  
17 volatility because of the market and it is more liquid.  
18 MS. MARKEY: Normally you would.  
19 MR. SCHREIBER: And in this instance, as the  
20 volume peaks here like a mountain, the price actually goes with  
21 it.  
22 MS. MARKEY: That is correct.  
23 MR. SCHREIBER: And is there an explanation for  
24 that from your analysis?  
25 MS. MARKEY: I think my next slides or next  
26 couple of slides would probably give you a better answer to  
27 that.  
28 CHAIRMAN DUNN: Let's go there.  
0121  
01 MS. MARKEY: What you have here is, I'm going to  
02 show you not only for California, but for several other  
03 locations throughout the United States. There is different days  
04 that I picked out with various different transactions. Each one  
05 of these represents a single company's reported transaction at a  
06 single price.  
07 In this particular example on June 19th, 2001,  
08 there was one company that represented 41 percent of the total  
09 volume that was reported. And the midpoint of that day was  
10 8.25.  
11 If you took that trade out, it would have changed  
12 the volume -- the midpoint price to 8.31, a difference of 6  
13 cents.  
14 If I continue along with these examples, on  
15 August 2nd, 2001, there is a single company that reported 20  
16 percent of the volume, and it created an average -- and by the  
17 way, I just would want to point out one thing about this slide,  
18 as well as a couple of the others.  
19 You'll notice that a lot of the volumes are on  
20 the very edge of one end or the other of the price range. In  
21 this particular example, there was one -- only one other very  
22 small, small volume that was done at a price that was lower than  
23 the 3.64 that was done on this particular day.

Gas-fi.txt

24 Also notice that this volume has no corresponding  
25 equivalent. In other words, if I buy at a location, I'm usually  
26 selling to someone who is also going to report. In this  
27 particular example, there is absolutely no one who traded the  
28 same kind of volume anywhere near same kind of price that this  
0122  
01 company claims to have reported volume and price at.  
02 MR. DRIVON: If someone were trying to report for  
03 the purpose of manipulating the market either up or down, or the  
04 index, I guess, would be a better way to put it.  
05 MS. MARKEY: Yes.  
06 MR. DRIVON: That person would be best served if  
07 they pushed the envelope with respect to either the higher or  
08 lowest price; correct?  
09 MS. MARKEY: Correct.  
10 MR. DRIVON: What you say that you're seeing here  
11 is that the higher volumes of trading that were reported were  
12 reported at the margins of the price; correct?  
13 MS. MARKEY: Typically.  
14 MR. DRIVON: But if things were flowing along in  
15 a normal way, where there was just your basic average amount of  
16 exaggeration, you would expect to see a more uniform spread of  
17 transactions over the price range for that day; wouldn't you?  
18 MS. MARKEY: Yes, I would expect that.  
19 MR. DRIVON: So, when you, as an expert, look at  
20 this, what it says to you is, just based on this information  
21 alone, there's a red flag that these prices aren't real; right?  
22 MS. MARKEY: Something looks very fishy.  
23 MR. DRIVON: Right. And then, when you overlay  
24 the fact that the volumes being reported, like the last slide,  
25 are hugely disproportionate to historic levels, another red  
26 flag?  
27 MS. MARKEY: That is correct.  
28 MR. DRIVON: Then when you look at the  
0123  
01 volatility, where the swings from day-to-day or week-to-week are  
02 greater in terms of reported trading volume than the total  
03 amount traded in an ordinary market, that's another red flag.  
04 MS. MARKEY: Correct.  
05 MR. DRIVON: I mean, you could get -- if normally  
06 the trading level was a 3 when this was going on, you could see  
07 weekly swings to a magnitude of 5 or 6, if you follow what I  
08 mean.  
09 I mean, we're trading down here, and you've got  
10 this much. Then, when all of this is going on, you can see  
11 daily and weekly swings that are twice as much of what the total  
12 had been.  
13 MS. MARKEY: That's correct.  
14 MR. DRIVON: And some of this could be explained  
15 by what we've all heard of as round-trip trading, I guess. Is  
16 that right?  
17 MS. MARKEY: Yes. I have an example of something  
18 that might be considered to be a wash trade or round-tripping.  
19 MR. DRIVON: Okay.  
20 MS. MARKEY: In this particular example, soCal  
21 actually when you took trade out, the difference was  
22 approximately three cents.  
23 Again, I'll just flip through these. This is  
24 PG&E's Citygate. Probably maybe not quite as volatile as SoCal  
25 Gas large packages, but nevertheless, did see its own share of  
26 volatility.  
27 And here is a trade. And this one actually --  
28 consistently PG&E's Citygate, there was one company consistently  
0124  
01 reported a large volume but always managed to consistently

Gas-ii.txt

02 report approximately in the middle. So, there wasn't  
03 necessarily a change in the price in this particular example.  
04 It went from \$5.15 to only about \$5.16, changed at less than a  
05 penny.

06 Same thing on the September 11th. Again, a  
07 company who reported approximately 37 percent, and again another  
08 company that reported 33 percent. I think the important part  
09 here is, there is one company though who consistently reports a  
10 very large significant volume.

11 This is Kern River. This actually is a price  
12 point that is a location where --

13 CHAIRMAN DUNN: Let me interrupt.  
14 You've gone through several examples. Do you  
15 know who is responsible for reporting these volumes on the  
16 particular days that you've identified here?

17 MS. MARKEY: At the time that Gas Daily received  
18 these, we typically would take the faxes, e-mails, and phone  
19 calls, and then within two weeks, we would destroy the documents  
20 that were sent to us.

21 I generally have a knowledge of various different  
22 folks who traded at the locations that we're referring to, at  
23 least here in Southern California, and the types of people who  
24 would report to us. And they're your usual suspects more or  
25 less. I have a list of the top ten traders who typically would  
26 report to us that I can give you a list of.

27 CHAIRMAN DUNN: In other words, Gas Daily didn't  
28 archive that underlying data.

0125

01 MS. MARKEY: That is correct.

02 CHAIRMAN DUNN: But given your experience, you  
03 can identify at least a list of those companies that could have  
04 reported such a large volume to Gas Daily and at least been  
05 believed by the employees of Gas Daily at that time?

06 MS. MARKEY: In the documents that I provided to  
07 you gentlemen today, there is a list, a partial list, but a list  
08 nevertheless of companies who typically reported to both Gas  
09 Daily to Megawatt daily.

10 CHAIRMAN DUNN: Can you give us a representative  
11 sampling of those who it would not be unusual for the employees  
12 of Gas Daily to see large volumes of the trades from those  
13 companies?

14 MS. MARKEY: That list right there, which starts  
15 out with Enron, AEP, Reliant, Mirant, Duke, Aquila, BP, Dynegy,  
16 Sempra, Coral, and El Paso.

17 CHAIRMAN DUNN: Okay. Given the representative  
18 samples that you have shown here, Ms. Markey, in your opinion,  
19 what's the likelihood that these volumes, given your analysis of  
20 the data, were either exaggerated or that they represent wash  
21 trades?

22 MS. MARKEY: I have an example that I'm showing  
23 here. On this particular day, and this is in Columbia,  
24 Appalachia, has absolutely nothing to do with California, but  
25 it's two large volumes. In fact, the two largest volumes  
26 reported that day. Both were above a bcf of gas; both were  
27 transacted at 3.145. They were reported by two separate  
28 different companies. So, they were exactly the same volume,

0126

01 and they were the exact same price.

02 This is a very -- and if you look at everyone  
03 else who reported at this particular location, there's no one  
04 who comes close to the volume or the size, nor the exact price  
05 value as these two particular transactions do.

06 MR. DRIVON: So you mean over at Columbia APP on  
07 August the 11th, 2001 somebody was buying gas, or at least said  
08 they were buying gas, at 3.145.

Gas-ii.txt

09 MS. MARKEY: That's correct.  
10 MR. DRIVON: And in California, we're paying \$16,  
11 or something like that?  
12 MS. MARKEY: Yes.  
13 MR. DRIVON: I mean, a multiplier of that amount.  
14 MS. MARKEY: The main reason I used this one is  
15 because it was a very large volume of exact quantity of exact  
16 price.  
17 MR. DRIVON: I understand that, and maybe their  
18 copy machine got stuck.  
19 But what caught my eye was the \$3.145, and then  
20 I'm thinking about the amount of money that we're paying here in  
21 California. And I know that that represents this spread that  
22 the Brattle fellows were talking about this morning.  
23 MS. MARKEY: Yes.  
24 MR. DRIVON: If a nickel is three-and-a-half  
25 billion, anybody got any idea what six-and-a-half dollars is?  
26 MS. MARKEY: It's a substantial amount of money.  
27 One of the locations where gas could flow from in  
28 production regions was Kern River Opal. This price point is  
0127  
01 from November 3rd, 2001.  
02 There was one company. Again, notice how close  
03 to the end of the range that this company reported, and they  
04 represented 36 of the total volume. If you take that particular  
05 trade out, it dropped the price by almost two cents.  
06 And again, I can continue with as many of these  
07 examples as possible. This is Carthage Hub in Texas, where  
08 there is one company who is roughly 76 percent of the total  
09 volume reported that day.  
10 Another company off Alliance pipeline as it went  
11 into the U.S. was 79 percent. And if I took this transaction  
12 out, it would have changed the price by about three cents as  
13 well.  
14 Nova, which is a Canadian price point which  
15 processes a lot of gas that comes down into California, this  
16 particular party -- actually, if you look at the slide, there's  
17 only four people who reported on this particular day at AECO,  
18 and one individual company represented 81.7 percent of the total  
19 volume that was reported that day.  
20 I just picked this, again, another price point,  
21 out of the clear blue. This is actually a point that's located  
22 in Oklahoma. Even though the price spiked, and you had a small  
23 spike in volume, you didn't necessarily see the kind of  
24 volatility that you did in California. Again, they too had a  
25 price point where one single transaction towards the end of the  
26 price range represented 65 percent of total volume. And here's  
27 what it would have looked like without that trade.  
28 Although California certainly had a very large  
0128  
01 volume of reported trades on a regular basis, unfortunately I  
02 can't tell you gentlemen that y'all were the largest point ever  
03 traded as far as Gas Daily was concerned. That actually is  
04 Chicago. In the case of Chicago, in this particular transaction  
05 over 4 bcf of gas was reported by one single company at this  
06 location. But it gets better.  
07 If you go to this particular day, which is June  
08 20th, 2001, this is the largest amount of volume ever reported  
09 to Gas Daily for any one particular price points. One company  
10 traded almost 7 bcf of gas in one particular morning.  
11 MR. DRIVON: Seven billion cubic feet of gas --  
12 MS. MARKEY: That's correct.  
13 MR. DRIVON: If I remember what that fellow in  
14 the second row back there said this morning, is just about  
15 enough gas to run California for a day.

Gas-ii.txt

16 MS. MARKEY: That's correct.  
17 MR. DRIVON: So, you've got one company who  
18 claims that they traded enough gas in one price point in the  
19 country to run California, which has got to be far and away the  
20 largest consumer in the country in terms of a state. They did  
21 it all by themselves.  
22 MS. MARKEY: That's what this graph would  
23 indicate.  
24 MR. DRIVON: That's what they told you; right?  
25 MS. MARKEY: Yes, by representing 52 percent of  
26 the total volume, it would have suggested that everybody who  
27 reported volumes on this particular chart would have had to  
28 transact with this one particular company.  
0129  
01 MR. DRIVON: Did you ever look to see if they had  
02 their fingers crossed behind their back.  
03 MS. MARKEY: I want to point out, too, that this  
04 particular company for this one single transaction -- for the  
05 transactions done on this one single day, I should say, would  
06 have had to cough up \$27 million just for one day's  
07 transactions.  
08 At this time, those were just the various  
09 different examples. Again, this is the ranking of the top ten  
10 companies who would represent companies who would report to Gas  
11 Daily and what their trading volumes were on general basis as  
12 reported to Gas Daily.  
13 So, we can either go through this, or we can go  
14 back, or if you have specific questions.  
15 CHAIRMAN DUNN: The most important question  
16 actually, unfortunately.  
17 Why don't we take about a five-minute break to  
18 give everybody a rest and for Evelyn to rest her fingers and  
19 change paper.  
20 [Thereupon a brief recess  
21 was taken.]  
22 CHAIRMAN DUNN: Why don't we get moving forward  
23 again.  
24 We're back on the record, continuing with the  
25 testimony of Ms. Markey, subject to the same regs and remedies  
26 as we discussed earlier at the outset of your testimony,  
27 Ms. Markey.  
28 Our apologies for interrupting. You were in the  
0130  
01 midst of going through some of the slides. I know there are  
02 some left. Why don't we just let you take up where we left off.  
03 MS. MARKEY: Great, thank you, Senator.  
04 I do want to clarify just because I want to kind  
05 of just make sure everybody is singing from the same sheet of  
06 music here, the contracts in question are -- contracts that any  
07 price manipulation would have an affect on would be contracts  
08 that were based off of an index, rather than just deals done at  
09 the spot market.  
10 CHAIRMAN DUNN: Mr. Drivon.  
11 MR. DRIVON: Well, it would affect the day-ahead  
12 spot market as of the time the folks show up at 6:30 or 7:30 in  
13 the morning, because I think one of your slides indicated, one  
14 of the very first things they would do would be, the traders  
15 would check Gas Daily.  
16 MS. MARKEY: That's true, that's true. It could  
17 be said that given the next morning when the market would open,  
18 or before the market would open on the NYMEX, you could refer to  
19 any price that was published by Gas Daily to start the market  
20 off first thing in the morning.  
21 MR. DRIVON: And then the other thing that  
22 typically traders would do at or about this time is, they would

Gas-ii.txt

23 check Enron On Line.  
24 MS. MARKEY: That's correct, to see what the  
25 bid-ask was on Enron's screen.  
26 MR. DRIVON: And the bid-ask on Enron's screen,  
27 of course, would always reflect that Enron was going to be one  
28 of the counterparties to the transaction. That's the way it  
0131 worked.  
01 MS. MARKEY: That is correct.  
02 MR. DRIVON: I mean, that's the way it was  
03 supposed to work. We found out there might not be a  
04 counterparty to some of the transactions, but at least Enron was  
05 involved in every transaction; correct?  
06 MS. MARKEY: Yes, it was a closed system.  
07 MR. DRIVON: And so, folks would typically check  
08 Enron On Line, which was run by, of course, Enron, who's the  
09 number one chief suspect on your list of ten.  
10 MS. MARKEY: Yes, that is correct.  
11 MR. DRIVON: And then, they would also check, in  
12 order to start off the day's trading, Gas Daily index, which, if  
13 what you've told us you believe to be is, in fact, true, is an  
14 index that was being misrepresented and manipulated; right?  
15 MS. MARKEY: That is true.  
16 MR. DRIVON: I did want to ask you a couple of  
17 other questions.  
18 These reports of price, to the extent that they  
19 were inflated or just false, let me read you a section of the  
20 California Penal Code.  
21 MS. MARKEY: All right.  
22 MR. DRIVON: There has been some question as to  
23 whether the activities that were taking place might be a  
24 violation of the law.  
25 Section 395 of the California Penal Code reads as  
26 follows:  
27 "Every person who willfully  
28 makes or publishes any false  
0132 statement, spreads any false  
01 rumor, or employs any other  
02 false or fraudulent means or  
03 device with the intent to affect  
04 the market price of any property  
05 is guilty of a misdemeanor."  
06 Did you know that?  
07 MS. MARKEY: No, I didn't.  
08 MR. DRIVON: Now, you've been telling us that in  
09 your opinion, and in the opinion of others who called for audits  
10 and investigations, there were in fact false statements made in  
11 terms of what the trading prices were. Isn't that true?  
12 MS. MARKEY: We suspected as much. We didn't  
13 know for a fact, but I sure did suspect as much.  
14 MR. DRIVON: Right, you suspected it, and others  
15 suspected it, and that's why there was an audit called for, and  
16 the protocols put in place, and the company hired to do it.  
17 MS. MARKEY: That's correct.  
18 MR. DRIVON: And in your opinion, based on your  
19 experience, training, and expertise, and the position that you  
20 held, being the person in charge of acquiring these data, it is  
21 your opinion that false statements were being made. Isn't that  
22 true?  
23 MS. MARKEY: It's my opinion. Again, I don't  
24 have clear evidence, but it is my strong opinion.  
25 MR. DRIVON: It is your strong opinion, and you  
26 are an expert on the accumulation of these data that you've been  
0133

Gas-ii.txt

01 talking about; isn't that true?  
02 MS. MARKEY: Based on the information that I saw  
03 in the four years that I collected data, that is correct.  
04 MR. DRIVON: And it's your further opinion, if I  
05 understand it correctly, that these false statements and this  
06 false reporting was being done for the purpose of affecting the  
07 market price of gas; isn't that true?  
08 MS. MARKEY: I didn't know exactly the purpose,  
09 but you could assume that would be the purpose.  
10 MR. DRIVON: That's your opinion as you sit here  
11 today; isn't that true?  
12 MS. MARKEY: That is correct.  
13 MR. DRIVON: And that's an opinion that you hold  
14 strongly; isn't that true?  
15 MS. MARKEY: That is correct.  
16 MR. DRIVON: The acquisition of the publications  
17 was made in August of 2001?  
18 MS. MARKEY: That is correct.  
19 MR. DRIVON: And that's the same month that the  
20 audit was killed; right?  
21 MS. MARKEY: Yes.  
22 MR. DRIVON: And when did you leave the  
23 publication?  
24 MS. MARKEY: March 2002.  
25 MR. DRIVON: These examples that you've given us  
26 are examples that you have put together by reviewing and  
27 analyzing the data that you have available to you; correct?  
28 MS. MARKEY: Correct.  
0134  
01 MR. DRIVON: And those data are basically taken  
02 from the data that you helped accumulate in your official  
03 capacity with the publication; correct?  
04 MS. MARKEY: That is correct.  
05 MR. DRIVON: And in order to -- you're not  
06 telling us that these examples that you've pulled out are the  
07 only examples; are you?  
08 MS. MARKEY: No, I'm not.  
09 MR. DRIVON: I mean, it takes a lot of time to go  
10 through these data and try to put these sorts of things  
11 together; correct?  
12 MS. MARKEY: Didn't take me very long.  
13 MR. DRIVON: And if you wanted to spend more time  
14 on, it you could come up with more examples?  
15 MS. MARKEY: Yes, I could.  
16 MR. DRIVON: You've given us certain documents  
17 here. In fact, about three inches of them.  
18 MS. MARKEY: Yes.  
19 MR. DRIVON: Can you tell us basically what those  
20 documents are? what types of documents do we have there?  
21 MS. MARKEY: Well, they're e-mails primarily in  
22 regards to the period of time when I was at Platts that were  
23 back and forth between myself and the price reporters, or from  
24 industry participants who sent in information regarding price  
25 information.  
26 MR. DRIVON: So, the e-mails are one style of  
27 document that you have.  
28 MS. MARKEY: Most of those were from the time  
0135  
01 when I was at Gas Daily, was FT Energy. After September 2001, I  
02 was no longer in charge of the price team.  
03 MR. DRIVON: As of when?  
04 MS. MARKEY: September 2001.  
05 MR. DRIVON: Let's see. You're the one that was  
06 pushing for the audit?  
07 MS. MARKEY: Yes.

Gas-ii.txt

08 MR. DRIVON: And a company came along, and the  
09 audit was going to be of Enron?  
10 MS. MARKEY: Yes.  
11 MR. DRIVON: That you personally suspected was  
12 the main, or at least the largest, misreporter.  
13 MS. MARKEY: Yes.  
14 MR. DRIVON: And so, you arranged to get these  
15 protocols done, and the company lined up, Price-waterhouse-  
16 Cooper, and the contract's ready to be signed and all that;  
17 right?  
18 MS. MARKEY: Yes.  
19 MR. DRIVON: Then the company gets sold to  
20 somebody whose biggest customer for this information is Enron;  
21 right?  
22 MS. MARKEY: Yes.  
23 MR. DRIVON: That happens in August.  
24 MS. MARKEY: Yes.  
25 MR. DRIVON: Within 30 days, they take you off  
26 that job.  
27 MS. MARKEY: Two weeks.  
28 MR. DRIVON: Two weeks.

0136  
01 And the fellow or person who replaced you  
02 probably hasn't said anything about this.  
03 MS. MARKEY: Not that I'm aware of.  
04 MR. DRIVON: If I understand it, Ms. Markey, you  
05 are currently under subpoena not only by this Committee, but  
06 also by other entities. Is that correct?  
07 MS. MARKEY: That is correct.  
08 MR. DRIVON: Including the FERC?  
09 MS. MARKEY: Yes, sir.  
10 MR. DRIVON: The Justice Department?  
11 MS. MARKEY: CFTC, not the Justice Department.  
12 MR. DRIVON: Anybody else besides CFTC and FERC?  
13 MS. MARKEY: So far that's it.  
14 MR. DRIVON: And the testimony that you're giving  
15 here today is testimony you haven't given in any other official  
16 forum?  
17 MS. MARKEY: No, I have not.  
18 MR. DRIVON: And the documents that you've shared  
19 with us, some of which we were able to look at, and some of  
20 which -- and I think the most important and incriminating  
21 documents were documents that you were willing to give to us  
22 only after immunity was confirmed; is that correct?  
23 MS. MARKEY: That's correct.  
24 MR. DRIVON: And those were given to us in the  
25 manner that some saw earlier, where they were actually presented  
26 to the Sergeant here in her official capacity; right?  
27 MS. MARKEY: That is correct.  
28 MR. DRIVON: Those are documents that have not

0137  
01 been to this time to your knowledge released to others?  
02 MS. MARKEY: No, they have not.  
03 MR. KIRTLAND: Just to clarify, Mr. Drivon, all  
04 the documents were provided pursuant to the immunity agreement.  
05 MR. DRIVON: I understand that.  
06 MR. KIRTLAND: Okay. I just wanted to make sure  
07 we're on the same page.  
08 MR. DRIVON: Oh, we are on the same page.  
09 And not only was immunity conferred, but there is  
10 a subpoena compelling the production of those documents. So,  
11 bringing them to Sacramento was not a voluntary act on your  
12 client's part.  
13 MR. KIRTLAND: That's correct.  
14 MR. DRIVON: You told us earlier that some level

Gas-ii.txt

15 of price exaggeration or puffing has sort of always been  
16 involved in this process; correct?  
17 MS. MARKEY: Yes.  
18 MR. DRIVON: But what we're seeing here in these  
19 data that you have provided us is a whole new level of falsity;  
20 isn't it?  
21 MS. MARKEY: It could be construed as such.  
22 MR. DRIVON: Well, you've looked at these data  
23 for a long time, and you were central to the accumulation of  
24 these data and to the questions that were being asked about  
25 these data; true?  
26 MS. MARKEY: Yes.  
27 MR. DRIVON: Can you think of any other way that  
28 these data could be construed, other than a whole new level of  
0138 manipulation was being brought to the gas market?  
01 MS. MARKEY: I don't know any other reason why  
02 some volume would be traded at these particular levels and then  
03 reported as such.  
04 MR. DRIVON: But it's not only the levels. It's  
05 the pattern; isn't it? In other words, the prices and volumes  
06 are being reported at the margins of the market.  
07 MS. MARKEY: That's correct.  
08 MR. DRIVON: Now, as I understand it, on June the  
09 16th of 2001, there were price transactions that took place that  
10 involved Enron; is that right?  
11 MS. MARKEY: Yes, I believe so.  
12 MR. DRIVON: June 16th, I think that's the right  
13 date.  
14 MS. MARKEY: PG&E and SoCal Gas large packages.  
15 MR. DRIVON: Or was it the 19th.  
16 MS. MARKEY: It was the 19th, actually.  
17 MR. DRIVON: And on the 19th, as I understand it,  
18 you had occasion not only to look at the data that you have, but  
19 also the daily position reports of Enron; is that correct?  
20 MS. MARKEY: Yes I have.  
21 MR. DRIVON: And with respect to the daily  
22 position reports of Enron, on that day Enron was short; isn't  
23 that true?  
24 MS. MARKEY: That is correct.  
25 MR. DRIVON: In other words, Enron needed the  
26 price of natural gas to go down that day in order to make money;  
27 correct?  
28  
0139 MS. MARKEY: Correct.  
01 MR. DRIVON: And they misreported on that day, or  
02 they reported unusual amounts of trading at unusual prices?  
03 MS. MARKEY: I don't know specifically that this  
04 person that reported here was Enron, but one might suspect  
05 that.  
06 MR. DRIVON: Well, let me make it really easy for  
07 you. I want you to assume it was Enron. I mean, it quacks like  
08 a duck, it walks like a duck. I mean, I want you to just assume  
09 it's a duck; okay?  
10 MS. MARKEY: I'll assume it's a duck.  
11 MR. DRIVON: All right. Now we've got a duck, an  
12 Enron duck. It's kind of leaning sideways as it stands there,  
13 kind of like the sign.  
14 The way that they reported volumes and prices on  
15 that day, they needed the price to go lower to make money?  
16 MS. MARKEY: Yes.  
17 MR. DRIVON: The volumes and prices that were  
18 reported on that day pushed the market in which direction?  
19 MS. MARKEY: Down.  
20 MR. DRIVON: I'm shocked.  
21

Gas-ii.txt  
22 And therefore, based upon those trading  
23 activities, and their market position that you verified by  
24 market data and reporting data that they had internally are  
25 consistent.  
26 MS. MARKEY: Yes.  
27 MR. DRIVON: And they made money.  
28 MS. MARKEY: They would, if that's the position  
0140  
01 that they had in Southern California.  
02 MR. DRIVON: I'm still assuming that it's a duck.  
03 MS. MARKEY: It's a duck.  
04 I actually do have an example, however,  
05 specifically of a situation with Enron, if you'd like to see  
06 that.  
07 MR. DRIVON: Absolutely. This is going to be an  
08 example of a false statement?  
09 MS. MARKEY: It's not necessarily false, but it  
10 would have been --  
11 MR. DRIVON: If we assume it's false, this is a  
12 statement that is going to have an affect on the market.  
13 MS. MARKEY: What we'll show is how much Enron  
14 actually did report at one particular location. It's only one  
15 day. And what happened was, is on February the 2nd --  
16 CHAIRMAN DUNN: I'm sorry, let me interrupt. I'm  
17 going to get everybody to the right page. Chris has a quick  
18 question, then we'll get to this.  
19 MS. MARKEY: Sure.  
20 CHAIRMAN DUNN: For everybody's sake, we are in  
21 that packet that was just handed out, towards the very back.  
22 The title starts, "Text from e-mail sent by David Behrman to  
23 Gas," et cetera, et cetera.  
24 Chris.  
25 MR. SCHREIBER: I actually just wanted to  
26 clarify.  
27 Just a point that Larry had made about seeing  
28 Enron's DPRs, I'd actually given you a figure from the DPRs --  
0141  
01 MS. MARKEY: That is correct. You did not show  
02 me the exact ones. You gave me a list and said that you had  
03 pulled that from that. That is correct.  
04 CHAIRMAN DUNN: And Chris, for clarification for  
05 everybody who's sitting here, DPR is?  
06 MR. SCHREIBER: Daily Position Report.  
07 CHAIRMAN DUNN: Which is, just so everybody  
08 understands, what's the significance of a DPR?  
09 MS. MARKEY: A Daily Position Report is  
10 ultimately the net long or short position that the company holds  
11 every single day. For instance, some of the numbers that Chris  
12 gave me showed that on June 19th, Enron, according to the sheet  
13 he gave me, was short 589 bcf as far as their daily position  
14 that -- for that particular day.  
15 If I can put that in context, the total gas  
16 supply in the U.S. every day from both Canada and U.S.  
17 production is approximately 53 bcf, which is only 10 percent of  
18 Enron's total position for that one single day.  
19 CHAIRMAN DUNN: And being short of their DPR can  
20 tell you, at least theoretically, what their motivation may be  
21 to how that gas price should come out.  
22 MS. MARKEY: That is correct.  
23 CHAIRMAN DUNN: Okay.  
24 Mr. Drivon.  
25 MR. DRIVON: I want to put on the record at this  
26 point that use of the Daily Position Report from Enron in this  
27 fashion was at my express authorization and instruction to  
28 Mr. Schreiber for purposes of preparing witnesses who testify in

Gas-ii.txt

0142  
01 this hearing.  
02 MS. MARKEY: Okay.  
03 CHAIRMAN DUNN: Ms. Markey, please, let's go to  
04 this one.  
05 MS. MARKEY: Right. This is an e-mail text from  
06 an e-mail that I received from David Behrman, who reported to me  
07 in Houston. He was basically in charge of the actual pricing  
08 teams themselves down in Houston.  
09 And let me just call attention to the middle  
10 paragraph that says,  
11 "I got a call today from Patrice  
12 Thurston ... who trades Chicago  
13 and Michigan gates."  
14 By the way, Patrice is a trader at Enron,  
15 "she said [that] somehow her 1.3  
16 bcf at Chicago was left out of  
17 the sheet they sent Friday."  
18 This is probably the only documentation that I  
19 have that actually shows how much volume a particular company  
20 actually traded as far as a name, and a number, and a location.  
21 What I did was, if you'll flip to the next page,  
22 I actually was able to figure out what the impact of Enron's  
23 missing data was for that Chicago price for February 5th, 2001.  
24 As you know, the prices are gathered every day  
25 and totaled up. Although not available through -- on the  
26 publication itself, on Gas Daily's website, you can actually go  
27 in and get the total volume that was reported, the aggregated  
28 total volume that was reported for a particular price point.

0143  
01 You can also get the midpoint, and that's what I  
02 did here. I actually collected it for a few days so that you  
03 could get the general overall pattern of how much gas was  
04 reported at this particular location, which happens to be  
05 Chicago's citygates.  
06 If you'll notice, on the flow date of February  
07 1st, approximately 3.8 bcf was reported. On February 2nd, 3.6  
08 bcf was reported. And then there's a significant drop down to  
09 2.4, and then back up to 3 bcf, 4.2 bcf, 3.7 bcf, so forth and  
10 so on.  
11 So, you can see that there was a definite drop in  
12 volume for the days where Enron left their volumes out of the  
13 price report for that day.  
14 MR. SCHREIBER: Did Patrice Thurston represent  
15 all of Enron's reporting to Gas Daily for this price point, or  
16 were there other traders from Enron?  
17 MS. MARKEY: Oh, no, there were other traders  
18 from Enron. This just -- she happened to be the one who traded  
19 Chicago and Michigan gates.  
20 There could have been other price -- there  
21 certainly were, as there was close to 700 traders at Enron  
22 MR. SCHREIBER: were there others for this price  
23 point at the Chicago-Michigan gates, or was she the only Enron  
24 representative?  
25 MS. MARKEY: In this particular instance, it  
26 sounds like she's the only one, but I cannot recall for a fact  
27 whether she was or not. There were certainly for other  
28 locations, and there were also numbers provided to us by Enron

0144  
01 On Line, but I believe they all capsulized together when they --  
02 when they reported. At least that's what they told us they did.  
03 All right, so we're back to the slide -- and by  
04 the way, on a Friday, whenever a trader reports their prices,  
05 it's always for a three-day period. It's for Saturday, Sunday  
06 and Monday. So, all three days were missing the volume that

Gas-ii.txt

07 Enron would have reported that day.  
08 If I can continue, I then went ahead and included  
09 Enron's volume that was -- and again, I've got this in thousands  
10 of MMBtus to stay consistent with how the data is reported. So,  
11 it looks like 1300 thousand in Btu, which is 1.3 bcf. And  
12 notice then, when you add that back in --  
13 CHAIRMAN DUNN: I'm going to interrupt.  
14 Just for everybody following, we're now on the  
15 "Impact of Enron's Missing Data," but Slide 2, and it's labeled  
16 as "Slide 2."  
17 MS. MARKEY: All right.  
18 If you'll notice with the addition of the volume,  
19 it gets the total volume for Chicago in line with all the other  
20 days that volume was reported for Chicago.  
21 If I take that one step further, Enron --  
22 CHAIRMAN DUNN: We're now on Enron Slide 3.  
23 MS. MARKEY: Yes, we are now on Slide 3.  
24 Enron On Line reported to Gas Daily through a  
25 mechanism. We had a separate stand alone index that was created  
26 sometime around March or April of 2001, whereby Enron On Line  
27 came to us and requested that we set up an index that would  
28 bring in all their prices for specific locations.  
0145  
01 Initially we started this index because we  
02 thought -- we being Gas Daily -- thought that we would get all  
03 the other electronic indexes to participate, such as the ICE,  
04 the Intercontinental Exchange, E Speed.  
05 As it turned out, there was only one on line  
06 entity that provided us prices, which was Enron On Line.  
07 So on the particular day that we're talking about  
08 here, Enron On Line turned in a price to Gas Daily of 6 dollars  
09 and 84.7 cents. So, assuming that that's all of the price that  
10 Enron would have done, since anything done on Enron On Line was  
11 always done with Enron, I added that back into the number that  
12 would have been reported for the midpoint. And you can see that  
13 the total revised volume, with the revised price, would have  
14 changed the price by almost three cents.  
15 All this really proves is that Enron did have an  
16 influence on the market, and it gives you a concept of how much  
17 volume they could and did report at a particular location.  
18 And you can take that assumption and carry it  
19 forward to other locations, particularly if we look at -- and  
20 this is in your documents -- the locations that they traded and  
21 reported through Gas Daily through the electronic exchange.  
22 There were approximately 10 or 12 locations where they  
23 specifically reported on an ongoing basis, and SoCal gas large  
24 packages was one of them.  
25 CHAIRMAN DUNN: And as discussed between you and  
26 Mr. Drivon earlier, a three-cent change, according to the  
27 revisions you did here, "Total Revised Volume," and compared it,  
28 is huge.  
0146  
01 MS. MARKEY: I would have killed to make three  
02 cents as a trader. Not literally, of course.  
03 MR. DRIVON: I was going to say, that's another  
04 violation of the California Penal Code.  
05 CHAIRMAN DUNN: We understand, Ms. Markey.  
06 Senator Johannesen.  
07 SENATOR JOHANNESSEN: The numbers you used, the  
08 approximately 700 traders.  
09 MS. MARKEY: Yes, sir.  
10 SENATOR JOHANNESSEN: That Enron had, the  
11 information that we just now received, was that indicative of  
12 what they all did? Or was there some specific unit of Enron  
13 that did this?

Gas-ii.txt

14 I'm assuming they had a lot of offices, but 700  
15 people wouldn't be in one boiler factory; would they?  
16 MS. MARKEY: That's a very good question.  
17 To my knowledge, the numbers at Enron were rolled  
18 up and aggregated, but I don't know how many of their  
19 subsidiaries made up those numbers. They had several different  
20 companies that actually did trade. Enron Energy Services is  
21 one; Enron Capital and Trade was another.  
22 SENATOR JOHANNESSEN: So, am I correct in  
23 assuming then that Enron internally also traded, round robin  
24 internally? That maybe subsidiaries of Enron who then would be  
25 selling to, who then reported a higher income back in again?  
26 MS. MARKEY: That's possible.  
27 Certainly, when you look at capacity release,  
28 which is the trading of transportation, which is publicly  
0147 available information, that did consistently happen.  
01 SENATOR JOHANNESSEN: And that can be shown by  
02 the volumes that in fact was delivered, rather than on paper?  
03 MS. MARKEY: As far as the trades or --  
04 SENATOR JOHANNESSEN: Yes.  
05 MS. MARKEY: It's a possibility, yes.  
06 SENATOR JOHANNESSEN: Thank you.  
07 MR. DRIVON: Let's talk about partial release for  
08 a minute, because that gets us right back to what we were  
09 talking about this morning; doesn't it?  
10 MS. MARKEY: Yes, it does.  
11 MR. DRIVON: So pipeline's a little bit tough for  
12 me to think about, because, you know, it's full, or it's not  
13 full, or it's only partly full, or it looks like it's full but  
14 it hasn't got anything in it, and we've got a lot of hard things  
15 to think about.  
16 But if we compare it to an apartment building,  
17 and we say that El Paso owns this entire apartment building, and  
18 it's full of apartments.  
19 MS. MARKEY: Correct.  
20 MR. DRIVON: And El Paso's got to do something  
21 with all those vacant apartments.  
22 MS. MARKEY: Yes.  
23 MR. DRIVON: So, what they do with that is, they  
24 get their subsidiary company, Merchant, to give them a master  
25 lease on the apartment house.  
26 MS. MARKEY: Yes.  
27 MR. DRIVON: So now, they book a profit because  
0148 they got the empty apartment building off to Merchant.  
01 MS. MARKEY: Yes.  
02 MR. DRIVON: Now, Merchant's sitting there with  
03 it, and they really don't have any native ability to rent all  
04 those apartments because they're just not that big. So, they're  
05 either taking a huge risk, or they're going to lay it off some  
06 place.  
07 Are you with me so far?  
08 MS. MARKEY: Yes.  
09 MR. DRIVON: So they make a deal with Enron to  
10 actually rent all those apartments.  
11 MS. MARKEY: Yes, they could do that.  
12 MR. DRIVON: And then Enron, a partial release  
13 would be if Enron then goes and sublets some of those  
14 apartments. That would be a partial release, right?  
15 MS. MARKEY: Yes, that's correct.  
16 MR. DRIVON: So, that's kind of a rough, and I  
17 see one of those Brattle fellows back there shaking his head and  
18 kind of going like this, so I know the example is not precise,  
19 but there is an analogy there.  
20

Gas-ii.txt

21 So, when they sublet those individual apartments,  
22 it's kind of like a partial release of pipeline capacity. Is  
23 that what you're talking about?  
24 MS. MARKEY: Yes, that is correct.  
25 MR. DRIVON: And so, those partial releases are  
26 also tradeable commodities; aren't they?  
27 MS. MARKEY: Yes, they are.  
28 MR. DRIVON: And the partial releases are the  
0149  
01 right to transport gas. A partial release would be a right to  
02 transport a certain amount of gas over the pipeline; right?  
03 MS. MARKEY: Correct.  
04 MR. DRIVON: Kind of like subletting an apartment  
05 would give you the right to occupy a certain part of the  
06 building.  
07 MS. MARKEY: Yes.  
08 MR. DRIVON: And through the use of these partial  
09 releases, somebody who had the master lease could determine what  
10 the supply of available apartments was; right?  
11 MS. MARKEY: Yes.  
12 MR. DRIVON: You could release more of them or  
13 fewer of them.  
14 MS. MARKEY: You can also start splitting up the  
15 rooms within an apartment as well and sublease those in  
16 addition. It's called segmenting.  
17 MR. DRIVON: And through those mechanisms, you  
18 can affect supply?  
19 MS. MARKEY: Yes.  
20 MR. DRIVON: And through the affecting of supply,  
21 you can affect price?  
22 MS. MARKEY: Yes.  
23 MR. DRIVON: So, if you put together partial  
24 release mechanisms with phony price reporting mechanisms, it's  
25 still a duck?  
26 MS. MARKEY: Yes.  
27 MR. DRIVON: Now you have at least two ways that  
28 you can manipulate the market to make money on gas; right?  
0150  
01 MS. MARKEY: Yes.  
02 MR. DRIVON: And then, if in addition to that you  
03 happen to also trade electricity, and, say, in the fall of 2000  
04 into the spring of 2001, this duck happened to be real long in  
05 electricity forward, and you did this stuff with the price of  
06 natural gas or some other mechanism we talked about, as well as  
07 others, you would be affecting the price of electricity as well;  
08 right?  
09 MS. MARKEY: That is correct.  
10 MR. DRIVON: And if you're long in electricity,  
11 and you force price up, what happens?  
12 MS. MARKEY: If you're long in electricity, and  
13 you force the price up, if the price goes above what you  
14 originally paid for it, you make money.  
15 MR. DRIVON: Okay. Do you think that's what  
16 happened, in your opinion?  
17 MS. MARKEY: I think there are a lot of ways to  
18 make money in California, and that could have been one of them.  
19 MR. DRIVON: Actually two.  
20 MS. MARKEY: Two, yes, that's true. Yes, two.  
21 CHAIRMAN DUNN: Did you have more?  
22 MS. MARKEY: Actually, as far as the slides,  
23 there was the example of wash trading back on the original  
24 slide.  
25 CHAIRMAN DUNN: Right.  
26 MS. MARKEY: And if you kind of flip back and  
27 forth to the 2, you'll notice that in the TIPROA presentation we

Gas-ii.txt

28 start out with a quote.  
0151  
01 CHAIRMAN DUNN: For those who are following it,  
02 we're back into the original packet of the materials that was  
03 handed out. The slide that Ms. Markey had stopped at is  
04 entitled, "Wash Trading -- How Does It Affect the Indexes?"  
05 MS. MARKEY: We can go through this example, and  
06 then again we can go back and look at the chart that shows a  
07 potential example of wash trading.  
08 Basically all I did, if we stare onto the next  
09 slide, which says, "Example of How Wash Trades Could Affect  
10 Index and Create Volatility," we just simply looked to the  
11 example of Company A selling to Company B again at three  
12 dollars. Company B sells back to Company A that same 100,000  
13 MMBtus at three dollars.  
14 And keep in mind when this was done, more or less  
15 probably was not scheduled. It was just, again, a paper trade.  
16 Could have been done as many times as possible. This is just a  
17 one time example.  
18 So, when it comes time for the companies to both  
19 report to the indexes, Company A reports its 200,000 MMBtus at  
20 three bucks, and Company B does the same.  
21 Let's go on to the next slide. So, a total of  
22 400,000 MMBtus is reported to the price survey vis-a-vis both  
23 companies.  
24 Let's assume for a time that the total aggregated  
25 volumes of all other companies is 600,000, and an average price  
26 of 3.10. If that 400,000 had not been included, the price that  
27 would have been reported for the midpoint index that day would  
28 have been 3.10. However, with the inclusion of 400,000 at three  
0152  
01 dollars, it ultimately lowered the price by four cents, to  
02 3.06.  
03 And if I can just now step you back over to your  
04 slides again, this will be the one where it says, "Columbia,  
05 APP, August 11, 2001."  
06 CHAIRMAN DUNN: This is where we had the two  
07 identical reports.  
08 MS. MARKEY: That is correct.  
09 It's probably possible to look at some of these  
10 other volumes and prices, but this one stuck out to me because  
11 it was so very high, because it was a volume that exceeded  
12 anything else that anybody else would have done, and it was done  
13 by two individuals.  
14 The transactional data that I actually have in my  
15 data base also has a time at which these were reported. These  
16 were reported within 15 minutes of each other.  
17 I can't say for a fact that this is a wash trade,  
18 but using Mr. Drivon's example, it sure does smell like a duck  
19 to me.  
20 I don't really have any other examples, other  
21 than to go on to the final example or the final slide, the final  
22 two slides in the TIPROA presentation.  
23 And this is basically the limitations of the  
24 survey itself. Unfortunately what happened with the price  
25 surveys is, they became a formalized tool that they were  
26 intended to become. There never was any formal process of  
27 tracking trades. No audits were ever conducted. And in fact,  
28 they never really captured the entire market.  
0153  
01 Reporters being able to subjectively cull  
02 questionable trades, there was no science to that. In other  
03 words, how did they feel that day if, in fact, they even did it  
04 at all.  
05 And most importantly, these newsletters were in

Gas-ii.txt

06 the business to report what they heard in the market for their  
07 market. The market, of course, were the largest trading  
08 houses.

09 There were some possible solutions. At the time  
10 I did this, I didn't realize to the extent of how many people  
11 were going to come out and start admitting as to their  
12 falsifying information.

13 Since then, in rethinking all this, and thinking  
14 particularly how it affects my current employer, I think it's  
15 very, very important that either at a state level or a federal  
16 level that the reporting of prices have some kind of oversight.  
17 Right now, the publications themselves truly do not have any  
18 kind of means of which to gain accurate and credible prices.

19 The other thing they don't have the ability to do  
20 is to publish the individual trades as they're reported, unlike  
21 what you see when you trade on the NYMEX or the New York Stock  
22 Exchange. There's no way of actually seeing the individual  
23 trades.

24 And as somebody mentioned to the Committee  
25 earlier, and what we've heard recently is that a lot of  
26 companies have quit reporting to the publications as whole.  
27 That is probably a more serious issue than anything else,  
28 because what are we, the producer, going to price our gas at,

0154  
01 considering the Northeast indexes? And we have relied upon them  
02 after all these years, as well as a lot of utilities and the end  
03 users who do likewise.

04 CHAIRMAN DUNN: Would it also be saying -- and I  
05 know we've got our representatives from the PUC here as well --  
06 without that information, it would make the setting of rates by,  
07 say, a CPUC more difficult?

08 MS. MARKEY: Very difficult.  
09 MR. DRIVON: Did you know before you came here  
10 today that California law required the CPUC to use an index as  
11 part of their rating structure?

12 MS. MARKEY: I was aware, actually, based from my  
13 days at Nevada Power, that California had incorporated some of  
14 the indexes, but I didn't know to what extent the indexes played  
15 a part in their rate making.

16 MR. DRIVON: So, now we have a system of indexes  
17 that are created not for the purpose of reporting a market, but  
18 just to report what's said. And yet, those same indexes are  
19 mandated to be used in setting a price that people are going to  
20 pay out of their wallet for this commodity.

21 MS. MARKEY: Yes, that's true. Interestingly  
22 enough, a lot of the documents that I've provided to you  
23 gentlemen today, they're pretty much wide spread examples of not  
24 only the CPUC, but quite a number of other utilities as well as  
25 public utility commissions in other states that also use these  
26 prices for the same purposes that the CPUC does as well.

27 MR. DRIVON: A purpose for which it originally  
28 was not at all the intent that they be used.

0155  
01 MS. MARKEY: That is correct.

02 MR. DRIVON: I wanted to use this opportunity to  
03 tap your expertise with respect to one other area having to do  
04 with wash trades.

05 MS. MARKEY: All right.

06 MR. DRIVON: You showed us an example few minutes  
07 ago of two transactions at identical prices, identical volumes  
08 within 15 minutes of each other. That is probably a wash  
09 trade. But that would be a very simple example of how a wash  
10 trade could be done.

11 In other words, Company A sells to Company B, who  
12 sells back to Company A for the same amount of money; same

Gas-ii.txt

13 volume, same amount, same commodity.  
14 MS. MARKEY: Yes.  
15 MR. DRIVON: That's one way it can be done.  
16 It could also be done where there was an  
17 agreement between companies to spread those transactions over  
18 time, like the next day or the next week?  
19 MS. MARKEY: It could be that. It could be done  
20 that way.  
21 MR. DRIVON: That would make it more difficult to  
22 track; wouldn't it?  
23 MS. MARKEY: Yes, it would.  
24 MR. DRIVON: In addition to that, you could work  
25 out by agreement effective wash transactions that mixed  
26 commodities, for instance, selling gas at one price and buying  
27 back electricity at a price that reflected the spark spread, and  
28 therefore neutralize the transaction.

0156  
01 MS. MARKEY: That could occur, yes.  
02 MR. DRIVON: And you could do that either on the  
03 same day, concurrently, or you could do it over time.  
04 MS. MARKEY: Yes.  
05 MR. DRIVON: In addition to that, if you wanted  
06 to get even more sophisticated, you could begin buying and  
07 selling for amounts that cancelled each other an almost  
08 limitless number of derivatives.  
09 MS. MARKEY: Yes.  
10 MR. DRIVON: Forward contracts, or delivery  
11 contracts, or pipeline capacity. And then you could mix all of  
12 those up.  
13 MS. MARKEY: Yes.  
14 MR. DRIVON: By agreement, you could effectively  
15 wash these trades, which cost nobody anything because all the  
16 prices for buying and selling whatever commodity is used, all  
17 cancel each other out. That's the definition of it; right?  
18 MS. MARKEY: Correct.  
19 MR. DRIVON: And through the use of those  
20 mechanisms, you could affect not only the gas market, you could  
21 affect also the electricity market and financial markets.  
22 MS. MARKEY: Yes.  
23 MR. DRIVON: If I understand it correctly, the  
24 only thing that really would prevent, to the extent that it  
25 might be prevented, that sort of activity would be the feeling  
26 of moral restraint and responsibility by whoever the company was  
27 that was considering doing it; right?  
28 MS. MARKEY: Yes.

0157  
01 MR. DRIVON: And that appears to be a commodity  
02 that was in short supply, at least during that period of time  
03 that we've been talking about, as far as you can tell.  
04 MS. MARKEY: There was a lot of pressure on  
05 people to make a lot of money during that period of time.  
06 MR. DRIVON: And a lot of money was made.  
07 MS. MARKEY: Yes, there was.  
08 MR. DRIVON: Some of the traders that were  
09 involved in these transactions, just the traders themselves,  
10 some of them became millionaires over this; didn't they?  
11 MS. MARKEY: I've heard of that. Wasn't me or  
12 one of my friends.  
13 MR. DRIVON: That's let alone what the companies  
14 may have made.  
15 MS. MARKEY: Correct.  
16 MR. DRIVON: What do you think of the idea of  
17 mandating the reporting of pricing data with the name of the  
18 parties that are involved? Names of the parties could be held  
19 confidential for some period of time, but mandatory reporting of

Gas-ii.txt

20 pricing, including volumes, with criminal penalties for false  
21 reporting.  
22 How do you think that would affect the  
23 transparency of the market?  
24 MS. MARKEY: I think it would provide an amazing  
25 amount of transparency that we don't have available right now.  
26 MR. DRIVON: And that kind of transparency would  
27 likely have an affect of taking away a lot of the volatility  
28 that we're seeing by reason of the opacity in the market;

0158  
01 correct?  
02 MS. MARKEY: Correct. However, the market will  
03 always be volatile to a certain extent because of weather and  
04 supply-demand features.  
05 I think the type of excessive volatility that you  
06 saw during the period of 2000-2001 would be diminished  
07 substantially, if not completely, if prices had been made to be  
08 transparent, and more of the players and their participants be  
09 basically put in front of everybody to see.  
10 MR. DRIVON: Well, if the kind of trading volumes  
11 that we saw in that chart that we looked at before, on this  
12 chart here, if this increase in trading volume could be  
13 explained by weather, it would be a cold day in hell; wouldn't  
14 it?  
15 MS. MARKEY: Yes, I think that's a good  
16 explanation.  
17 CHAIRMAN DUNN: It's similar, Michele, to the  
18 duck question.  
19 MS. MARKEY: Similar to the duck question, yes.  
20 CHAIRMAN DUNN: Here's what I want to do, if I  
21 may, Ms. Markey. For us lay people trying very hard to  
22 understand, obviously, the total implications of, A, what you  
23 said, and B, certainly the complexities of the profession that  
24 you've operated in now for a number of years, I just want to  
25 give a quick lay person summary to see if my understanding is  
26 somewhere in the ballpark.  
27 Then I want to just cover real quickly, this is  
28 the first opportunity that we've had to review these documents.

0159  
01 We obviously need to take time and go through them.  
02 Independently, I suspect, we'll have many follow-up questions at  
03 a later date regarding those documents.  
04 MS. MARKEY: Yes.  
05 CHAIRMAN DUNN: But you and/or your counsel were  
06 gracious enough to prepare a brief index to those documents as  
07 well. I just want to touch upon them so I have a general  
08 understanding of the various categories that are there.  
09 My lay person's understanding, Ms. Markey, comes  
10 down to as follows. In listening to the testimony of both Paul  
11 and Matt earlier today, what I heard was there is the ability to  
12 impact the price of natural gas through the control of the  
13 capacity.  
14 MS. MARKEY: That's correct.  
15 CHAIRMAN DUNN: The PUC representatives testified  
16 that there is another very important factor on price, and that  
17 is the published indexes. And the PUC representative testified  
18 how important the published indexes are to the PUC to accomplish  
19 their tasks, as well as touching upon other important roles the  
20 indexes play within the industry.  
21 MS. MARKEY: Yes.  
22 CHAIRMAN DUNN: You've been gracious enough to be  
23 here for the past few hours. What I've heard you say is, in  
24 addition to that control of the capacity as a means of impacting  
25 price, the price can be impacted by, in effect, controlling the  
26 published index prices through exaggeration of volume or price,

Gas-ii.txt

27 or under reporting, or not reporting at all.  
28 And if we accept the PUC's testimony earlier,  
0160  
01 where those published indexes are in error, whether by  
02 fraudulent means or other deliberate acts, it's going to have a  
03 dramatic ripple effect on the pricing throughout the industry.  
04 MS. MARKEY: Yes, that's a very true statement.  
05 CHAIRMAN DUNN: I missed kind of the focus point  
06 of what you've been saying this afternoon?  
07 MS. MARKEY: For a lay person, you got it right  
08 on target.  
09 CHAIRMAN DUNN: Let me just cover real quickly  
10 the index. If you could, Counsel, if you've got a copy, or  
11 Michele, you're probably intimately familiar with it.  
12 So we all have an understanding of what  
13 generically is contained in the documents that were produced.  
14 MS. MARKEY: We basically divided the documents  
15 up into several different categories. Number one, examples of  
16 widespread use of Gas Daily Index, for instance, from NPR  
17 coverage, to the Massachusetts PUC, to FERC and the Cal ISO  
18 themselves using Gas Daily prices in price mitigation.  
19 Gas Daily indexes were intensely used throughout  
20 not only the industry themselves, but also within regulatory  
21 bodies throughout the United States.  
22 CHAIRMAN DUNN: Let's go to the Cal ISO for just  
23 a second.  
24 MS. MARKEY: Sure.  
25 CHAIRMAN DUNN: I believe you referenced that Cal  
26 ISO used them for price mitigation.  
27 MS. MARKEY: Yes. I said gas cost proxy.  
28 CHAIRMAN DUNN: In lay terms, what does that  
0161  
01 mean?  
02 MS. MARKEY: Basically it means that if they  
03 didn't know exactly what the cost of gas was, they used a basket  
04 of California indices in order to price out the gas component of  
05 the cost of electricity.  
06 CHAIRMAN DUNN: In other words, when you're  
07 dealing with the cost of electricity for the Cal ISO, one of the  
08 claims by the wholesale sellers of electricity was what they  
09 claimed to be incredibly high cost of natural gas.  
10 MS. MARKEY: Yes.  
11 CHAIRMAN DUNN: And in the price mitigation,  
12 determining what that gas price was, was important?  
13 MS. MARKEY: Very important.  
14 CHAIRMAN DUNN: And if that published gas index  
15 price was artificially high, for example, it's going to impact  
16 the mitigation process of the Cal ISO.  
17 MS. MARKEY: Absolutely.  
18 CHAIRMAN DUNN: All right. Again, we're just  
19 flushing out for us lay folks.  
20 MS. MARKEY: Sure.  
21 The next category are the categories of the  
22 possible price manipulation of the Gas Daily Index in which  
23 there are actually a couple of significant e-mails and/or  
24 letters and transcripts of conversations that we had with  
25 several companies.  
26 I'll frankly point out that the one that's  
27 probably most critical in looking at this is the March 12th,  
28 2001 transcript, where various electric traders at AEP called up  
0162  
01 David Behrman to complain that they did not want to see Enron On  
02 Line included in our transactions. And the gist of the  
03 conversation was that they knew that Enron was in the habit of  
04 manipulating prices.

Gas-ii.txt

05 Later on, there is a letter where the particular  
06 traders at AEP who had complained were, in fact, ex-Enron  
07 traders who knew that Enron provided false information.  
08 The next set of documents, there's also, let's  
09 see, right. The next set of documents is Enron-related  
10 documents.

11 CHAIRMAN DUNN: I'm sorry, Michele. I'm going  
12 to take you back.

13 One that strikes my interest, and again, I know  
14 that this is just a brief listing of the documents. June 28th,  
15 2001, Duke Reduces Communications with Gas Daily. What is that  
16 referring to?

17 MS. MARKEY: Duke used to send us a fax with all  
18 of their prices. And at this time we were also asking them to  
19 provide their forward market pricing, interestingly enough, at  
20 the suggestion of Enron and several others. And they refused to  
21 participate. In fact, were not wanting to give us any  
22 information, didn't want us calling any of the traders.

23 They never would give us any other reason, other  
24 than, just, we don't wish to talk with you.

25 CHAIRMAN DUNN: You reference, at Enron's  
26 encouragement.

27 MS. MARKEY: Actually, in a lot of the particular  
28 instances where Enron would come up -- this kind of relates to

0163 the next set of documents -- Enron was fond of calling us up and  
01 asking us to either support new products that they were creating  
02 or to actually create new price points based at their  
03 direction. In the particular example --

04 CHAIRMAN DUNN: Wait, would you say that sentence  
05 again.

06 MS. MARKEY: They were in the habit of calling us  
07 up and asking us to promote certain products that they were  
08 supporting, such as basis swaps, and they were also encouraging  
09 us to actually set up particular price points.

10 CHAIRMAN DUNN: All right.

11 MS. MARKEY: And the one where it was a response  
12 with Duke, I believe Duke was one of the parties that they  
13 wanted us to talk to about doing a certain basis spot swap  
14 product, and they had us actually get them to participate in  
15 providing this information and price data for that.

16 Which does get us to the next set of  
17 Enron-related documents, which is kind of two-fold. One, it  
18 does talk about how Enron had to do with the creation of the  
19 AECO Same-Day price hub. In effect, Enron gave us the  
20 methodology and dictated to us how that price index was going to  
21 be created. And we set it up at basically their behest.

22 Although we did encourage the industry to send us  
23 their feelings about this, we basically went with the Enron  
24 methodology on how to set up the particular AECO price point,  
25 called AECO Same-Day.

26 CHAIRMAN DUNN: We'll call that the Enron Hub?

27 MS. MARKEY: A lot of people used to call us

0164 Enron Daily, and there was a reason for that.

01 In addition, throughout most of these e-mails,  
02 there are detailed plans for establishing the electronic trading  
03 indexes which, as I explained earlier, was initially going to be  
04 a basket of all various different companies who reported  
05 electronically, but ultimately became only EOL, and ultimately  
06 was the whole reason why AEP quit reporting to us, because they  
07 thought that Enron was going to be providing us false data  
08 through that particular electronic index.

09 Additionally, this is what we ultimately tried to  
10 audit Enron on, was their information that they provided to us

Gas-ii.txt

12 on this electronic exchange.  
13 CHAIRMAN DUNN: Senator Johannesen.  
14 SENATOR JOHANNESSEN: Thank you.  
15 How many subsidiaries or businesses did Enron  
16 control? Sounds to me like they're a spider sitting in the web,  
17 and tentacles reaching out. And most of them, in order to  
18 survive or whatever, that they would go along with Enron.  
19 MS. MARKEY: Yes, actually there's another e-mail  
20 incorporated in this set where it's an announcement that NGX,  
21 which is the Canadian Exchange for AECO, also was planning to  
22 include Enron On Line's numbers, as well as Houston Street,  
23 which was another electronic exchange.  
24 So they did -- they touched all of us.  
25 SENATOR JOHANNESSEN: I appreciate that. I just  
26 want to tell you, for a while now I have been listening to more  
27 horse pucky than I like to think. It's refreshing to someone  
28 filling in the blanks. We expected as much, but really  
0165 appreciate someone coming out to do that.  
01 MS. MARKEY: Thank you, sir.  
02 SENATOR JOHANNESSEN: There's a lot of effort on  
03 your part, I know, and it takes a lot of backbone to do it. I  
04 just want you to know we appreciate it, because I think we've  
05 got it pretty well lined up who the bad guys were, and I hope  
06 that they get the appropriate due.  
07 But I thank you personally, because I really  
08 appreciate the fact that you come out to do this.  
09 CHAIRMAN DUNN: Michele, there's one, and it's  
10 your number 10 under the Enron-related documents, December 1st,  
11 2000, includes statements that producers prefer nontransparent  
12 prices.  
13 MS. MARKEY: Yes. Actually, this was an e-mail  
14 that was supposedly a public document that was talking about  
15 Enron's establishment of their on line exchange. And within the  
16 e-mail, it talks about how Enron On Line was going to provide  
17 more price transparency to the market, and that producers were  
18 deathly afraid of Enron On Line, because for many years, they  
19 enjoyed the benefits of nontransparent prices.  
20 Frankly, I think that's rather than ironic in  
21 this time and age that they would have made a statement like  
22 that when, in fact, they were encouraging the exact opposite.  
23 CHAIRMAN DUNN: If you'd continue going  
24 through.  
25 MS. MARKEY: Right.  
26 I think that pretty much -- oh, there is one  
27 other thing. Enron came to us in I believe it was March of  
0166 2001, and they wanted us to start up another set of indices for  
01 industrial products. They wanted us to get into pulp, paper,  
02 lumber, metals. They had a whole grocery shopping list that  
03 they wanted FT Energy to set up similar to the way we had set up  
04 Gas Daily. And there's a significant amount of back and forth,  
05 of us looking at that. And because we were in the process of  
06 being acquired, we never took it any place.  
07 CHAIRMAN DUNN: I think Mr. Drivon wants to hunt  
08 some ducks.  
09 MR. DRIVON: One of the commodities that they  
10 were talking about indexing and trading was water; wasn't it?  
11 MS. MARKEY: Yes.  
12 MR. DRIVON: So now they're going to get indexes  
13 going that make sure we stay warm enough, that we can see at  
14 night, and we have something to drink.  
15 And Enron, by the way, they weren't all by  
16 themselves in all of this misreporting of prices, and of all  
17 these other shenanigans we've been talking about. I mean, they  
18

Gas-ii.txt

19 had company; didn't they?  
20 MS. MARKEY: Yes.  
21 MR. DRIVON: And that little list of ten suspects  
22 up there is what you, in your opinion, believe their main  
23 company to have been?  
24 MS. MARKEY: Yes.  
25 MR. DRIVON: We've talked a lot about Enron here,  
26 but we're not doing that because we want to leave out anybody,  
27 are we? We want to be fair.  
28 MS. MARKEY: Well, the next set of documents that  
0167  
01 we have was some -- a board of discussions that we were having  
02 with Williams.  
03 Williams had a rather unique idea. They had a  
04 whole list of Gas Daily price points that they wanted to  
05 basically put in a basket and create a thing called the UE  
06 Index, which I believe stood for Universal Energy.  
07 And the only reason we didn't go forth with it  
08 was because they were going to combine it with other data they  
09 had internally, and they would not let me see the formula as to  
10 how they were going to use our data as well as their own data.  
11 So I said, until you provide me the actual formula, I'm not  
12 going to give you the Gas Daily process.  
13 Interestingly enough, on Energy News Live, which  
14 is their website that they wanted to put this out -- and they  
15 also wanted us to publish this index as well in their  
16 publication -- they ended up publishing a UE Index.  
17 And I can't tell you to this day how they used it  
18 or why they used it, but I suspect it was going to be their kind  
19 of answer of, here in arbitrage, we're going to use Gas Daily  
20 basket and trade these baskets, and we're going to ask you to  
21 buy on our UE Index, and guess what? We're the only ones who  
22 know how the formula works, so we're kind of the ones holding  
23 the bag, more or less.  
24 So, we backed away from it.  
25 So now, I don't mean to just necessarily point  
26 out Enron, but Williams did try to jump in the ball game fairly  
27 late as well.  
28 CHAIRMAN DUNN: In other words, no really "trust  
0168  
01 us," justification.  
02 MS. MARKEY: That's correct.  
03 MR. DRIVON: Back to their moral imperative that  
04 they were so responsive to; right?  
05 MS. MARKEY: Yes.  
06 Last but not least, one of the other attempts  
07 while I was at FT Energy was, I thought if we at least put all  
08 the individual transactions that people would report to us  
09 during the day out on our real-time website, where people would  
10 see the transactions as they were being reported, that maybe  
11 people would be a little less likely to exaggerate or try to  
12 manipulate prices.  
13 That product was developed and was in beta  
14 test. Several companies did very enthusiastically jump up and  
15 become beta testers, two of which was Dynegy and El Paso.  
16 Interestingly enough, when I went to Enron's  
17 office, I only had a chance to demo in front of the techie guys.  
18 I never got in front of the traders. And the techie guys just  
19 didn't see any value in it.  
20 But a number of the other trading houses saw  
21 immediately. In fact, CMS Energy would have signed up had  
22 ultimately the product been taken off the shelf.  
23 So, one of the things that I believe Dynegy and  
24 El Paso at least had the benefit of through the beta test was  
25 that they could see each one of the individual transactions as

Gas-ii.txt

26 it was being reported, and ultimately knew what the ultimate  
27 index would have been, which is actually where a lot this data  
28 comes from that you guys now have, is from backups to the beta  
0169  
01 test.  
02 MR. DRIVON: Let me take a wild guess.  
03 This was an attempt that you were making to try  
04 to get some mediation into this false reporting, manipulation  
05 process; right?  
06 MS. MARKEY: I was trying to show the Emperor's  
07 clothes were not there.  
08 MR. DRIVON: Yes, and my while guess is, you ran  
09 into the same spot as the audit?  
10 MS. MARKEY: Yes.  
11 MR. DRIVON: And then because, or maybe because,  
12 they didn't want you to have any more pipe dreams, they took you  
13 off that desk.  
14 You don't need to answer that question.  
15 CHAIRMAN DUNN: Michele, I want to go to the last  
16 category of documents that you've got listed, that you listed as  
17 general. Just real quickly, the October 5th, 2000, Enron  
18 Reliance Sole Contributors to Electric Forward Pricing Table,  
19 what is that one?  
20 MS. MARKEY: Oh, right. We were going to start,  
21 or we did start, an electric forwards pricing table. And in  
22 this, we established where some of the information was going to  
23 be coming from.  
24 And to get started, we were going to basically  
25 just use Enron and Reliance faxes that they sent to us every day  
26 in order to put forward a forwards market price. So, they would  
27 basically be the two contributors giving us the prices.  
28 CHAIRMAN DUNN: What I want to do at this point,  
0170  
01 I want to just take about five minutes so I can discuss with  
02 both Larry and Chris if we have any follow-up questions, there  
03 may be just a few. So, why don't we take just five minutes,  
04 everybody, and then we'll wrap up quickly after that.  
05 MS. MARKEY: Thank you.  
06 [Thereupon a brief recess  
07 was taken.]  
08 CHAIRMAN DUNN: Why don't we get you back in and  
09 try to wrap it up here. I have just a few questions first.  
10 I want to go back to Gas Daily.  
11 MS. MARKEY: Yes.  
12 CHAIRMAN DUNN: To your knowledge, Ms. Markey,  
13 was management at Gas Daily aware of the potential of  
14 exaggerated reporting occurring, resulting in their publication  
15 of incorrect data?  
16 MS. MARKEY: Yes.  
17 CHAIRMAN DUNN: And at any time are you aware  
18 that they took any actions to correct that situation?  
19 MS. MARKEY: I'm not aware of any.  
20 CHAIRMAN DUNN: At any time did Gas Daily  
21 undertake any efforts to investigate for future use to ensure  
22 the accuracy of the data that it reported?  
23 MS. MARKEY: As far as pursuing a plan?  
24 CHAIRMAN DUNN: We could do it that way.  
25 The question really is, okay, I'm Gas Daily.  
26 I'm aware that we're getting inaccurate reports, exaggerated  
27 reports.  
28 MS. MARKEY: Yes.  
0171  
01 CHAIRMAN DUNN: From this point forward, did Gas  
02 Daily take any steps to investigate the reports that it  
03 received?

Gas-ii.txt

04 MS. MARKEY: Yes. There was an example. In  
05 fact, in January 10th of 2001, this is one of the letters, and  
06 it had to do with price discovery in Chicago. And we had a  
07 utility complain bitterly about the high prices. And we went to  
08 Enron, and to Aquila, Reliant, PG&E, National, and tried to get  
09 them to give us their transactional data.

10 CHAIRMAN DUNN: And they would not?

11 MS. MARKEY: And they would not.

12 CHAIRMAN DUNN: And that was the end of that  
13 investigation?

14 MS. MARKEY: That's as far as you can normally  
15 take it.

16 CHAIRMAN DUNN: So, despite the fact that it  
17 couldn't even complete its investigation, it just continued  
18 publishing its data in the same way?

19 MS. MARKEY: Yes.

20 CHAIRMAN DUNN: To your knowledge, did FERC or  
21 any state PUC, for that matter, ever question the validity of  
22 the prices reported in the indexes?

23 MS. MARKEY: No. As a matter of fact, they  
24 thought they were the most accurate out there. In fact, when  
25 FERC chose Gas Daily, they chose Gas Daily over several other  
26 publications because, supposedly, the prices were so accurate  
27 and reliable.

28 CHAIRMAN DUNN: Do you know if any entity ever

0172 complained or reported to FERC its concerns about the inaccuracy  
01 of the Gas Daily published prices?

02 MS. MARKEY: I'm not personally aware, no.

03 CHAIRMAN DUNN: Have you heard that through any  
04 source, that someone may have complained to FERC directly?

05 MS. MARKEY: I've heard, but I don't know any  
06 specifics.

07 CHAIRMAN DUNN: Are you aware if FERC ever made  
08 inquiry to Gas Daily about the accuracy of its published prices?

09 MS. MARKEY: No, not that I'm aware of.

10 CHAIRMAN DUNN: I know you're not there now, but  
11 have you heard even up to today whether FERC has explored this  
12 issue?

13 MS. MARKEY: Yes, they actually have subpoenaed  
14 Platts for documents regarding prices.

15 CHAIRMAN DUNN: Do you know approximately when  
16 that subpoena was served? Again, I know you're not there.

17 MS. MARKEY: Sometime in September.

18 CHAIRMAN DUNN: So, several months ago.

19 MS. MARKEY: Yes.

20 CHAIRMAN DUNN: Any other subpoenas that you are  
21 aware of that have been issued on Platts from any source?

22 MS. MARKEY: Not that I'm aware of.

23 CHAIRMAN DUNN: Mr. Drivon.

24 MR. DRIVON: I just want to take this opportunity  
25 to say that I personally, and on behalf of all the rest of us  
26 who have worked on this for so long, because as you know, this  
27 Committee has been working on this piece for almost a year now,  
28

0173 and I want to express my personal appreciation to you for the  
01 courageous move that you've made in coming forward with these  
02 documents and this testimony.

03 I suspect and I believe that you suspect that  
04 there may be some personal price that you'll have to pay for  
05 having done this. And I want to tell you that I recognize and  
06 commend you for what I believe to have been a very valuable  
07 public service, not only to the people of the State of  
08 California, but to the people across the United States, because  
09 this is an issue that most people don't realize the magnitude of  
10

Gas-ii.txt

11 in terms of what it costs each individual person and the  
12 economy.  
13 So, thank you very, very much.  
14 MS. MARKEY: Thank you.  
15 CHAIRMAN DUNN: Michele, I want to underscore  
16 what Larry just said. As indicated, I think we met quite  
17 sometime ago now, and we've had many discussions along the way.  
18 You've been a tremendous source of education, I  
19 know, for those of us who have dealt with you. I, too,  
20 appreciate the fact that you've come forward today.  
21 Counsel, it's also my understanding that we're  
22 going to keep this record open, and that there will be a  
23 follow-up submission. Counsel, if you would comment, please.  
24 MR. KIRTLAND: That's correct. We're going to  
25 submit a set of the documents that we gave you that's base  
26 leveled, so there'll be individual sequential numbers.  
27 And then, there will also be, perhaps, any  
28 further important points that Michele thinks is necessary to put  
0174 on the record.  
01 Our understanding is, once we make that  
02 submission, which should be in the next couple of days, then the  
03 record will be closed.  
04 CHAIRMAN DUNN: Yes. We will, as we oftentimes  
05 do here as we'll do today, we will not adjourn the meeting. We  
06 will recess, and the submission that you're referring to will be  
07 considered part of Michele's testimony, subject to the same  
08 continuums as we talked about at the outset of her testimony  
09 regarding this presiding officer compelling that testimony under  
10 9410, and then the same rights and remedies applying to that as  
11 well. It will be a continuation of her testimony.  
12 MR. KIRTLAND: Correct.  
13 CHAIRMAN DUNN: And then the record will be  
14 closed at that point in time.  
15 Mr. Drivon.  
16 MR. DRIVON: Unless the Committee decides that  
17 further testimony may be valuable, in which case we will notify  
18 you so that arrangements can be made for further response to the  
19 subpoena.  
20 CHAIRMAN DUNN: And it will be, of course, done  
21 through you, Counsel.  
22 MR. KIRTLAND: Right, that's fine. You have our  
23 contact information.  
24 MR. DRIVON: What I want to be sure we do is that  
25 we don't foreclose further testimony by this witness without the  
26 necessity of further subpoena. We don't envision that at this  
27 point, but that may be, and if it is, we will contact you to  
0175 arrange for that at a convenient time.  
01 MR. KIRTLAND: That's fine.  
02 CHAIRMAN DUNN: Let me close simply by offering  
03 a heart-felt thank you to you, Michele, for coming here today.  
04 I know you've come a long way.  
05 Counsel, I know you've come a long way.  
06 Also to Paul and to Matt. You two have also come  
07 an extraordinarily long way to assist the Committee today in our  
08 continued investigation and understanding of what occurred here  
09 in California. It helps tremendously as we move forward with  
10 crafting legislative solutions here at the state level.  
11 Also to Bill and to Trina as well from the PUC,  
12 we appreciate your presence here as well.  
13 without anything further from the Committee, we  
14 are recessed at this time. Thank you.  
15 [Thereupon this portion of the  
16 Senate Select Committee hearing  
17

18 Gas-ii.txt  
19 was terminated at approximately.  
20 4:55 P.M.]

# 2003 NATURAL GAS MARKET ASSESSMENT

STAFF REPORT BY THE  
OFFICE OF MARKET OVERSIGHT  
AND INVESTIGATIONS

FEDERAL ENERGY  
REGULATORY COMMISSION

W I N T E R 2 0 0 2 - 0 3

## PREFACE

This market assessment results from the Federal Energy Regulatory Commission's ongoing commitment to identify and address the significant issues facing wholesale electric and natural gas markets.

The assessment focuses primarily on natural gas. The Office of Market Oversight and Investigations (OMOI) seeks to identify issues important to customers and market participants and to signal the areas of greatest concern and challenge for the Commission at this time. The Federal Energy Regulatory Commission created the OMOI in April 2002 to focus its efforts on energy market oversight. Any errors are the responsibility of the OMOI alone and not of the Commission as a whole.

We encourage readers to provide feedback on this OMOI product by sending comments to an e-mail address specifically set up for this report: [marketassessment@ferc.gov](mailto:marketassessment@ferc.gov) or by contacting staff referenced in the acknowledgments. They can be reached as follows:

Office of Market Oversight and Investigations  
Federal Energy Regulatory Commission  
888 First Street, N.E.  
Washington, D.C. 20426  
202/502-8100

A fair energy marketplace is everyone's responsibility. Please do your part. If you encounter inappropriate energy market behavior, contact our Enforcement Hotline toll-free by telephone at 1-877-FERC-MOI or via e-mail at [hotline@ferc.gov](mailto:hotline@ferc.gov).

Thank you.

# 2003 NATURAL GAS MARKET ASSESSMENT

The North American natural gas marketplace has shown itself to be remarkably robust through the many trials of recent years. Nevertheless, wholesale natural gas markets face challenges as 2003 gets underway. Quick, thoughtful and effective action can address these challenges successfully and can maintain the benefits of a competitive natural gas industry for customers and the overall economy.

**T**he healthy functioning – or distress – of natural gas markets has profound effects on the overall economy. In 2001, customers spent \$142 billion on natural gas in the United States,<sup>1</sup> about 1.4 percent of the gross domestic product.<sup>2</sup> Almost one-quarter of the natural gas sold was used by residential customers.<sup>3</sup> The average annual natural gas bill for residential customers that year in the contiguous 48 states, stated in 2002 dollars, was \$844.<sup>4</sup> Other uses include the gener-

<sup>1</sup> OMOI analysis of statistics compiled by the Energy Information Administration and published in *Natural Gas Monthly*, December 2002

<sup>2</sup> U.S. Department of Commerce, Bureau of Economic Analysis, National Accounts Data, "Current-Dollar and Real Gross Domestic Product," at [www.bea.gov](http://www.bea.gov)

<sup>3</sup> Energy Information Administration, *Natural Gas Annual 2002*, Table 1, "Summary Statistics for Natural Gas in the United States, 1996-2000," pp. 5-6

<sup>4</sup> Energy Information Administration, Natural Gas Use in American Households, at [www.eia.doe.gov/emeu/consumption/briefs/recs/natgas/nat\\_gas\\_piece.html](http://www.eia.doe.gov/emeu/consumption/briefs/recs/natgas/nat_gas_piece.html). 2002 value was derived from EIA estimate of \$10.07 per Mcf residential fuel cost at 1997 residential consumption level of 83 Mcf. OMOI inflated this value using a 1% GDP deflator obtained from the U.S. Department of Commerce, Bureau of Economic Analysis

ation of electricity and the manufacture of other goods and services and for transportation fuel.

Competitive forces have created benefits for natural gas customers. Reform of natural gas markets in the United States by Congress and the Federal Energy Regulatory

Commission generated significant customer benefits over the past quarter century. Prior to passage of the Natural Gas Policy Act (NGPA) of 1978,<sup>5</sup> the natural gas industry faced chronic supply shortages arising from uneconomically low regulated wellhead prices.

The NGPA permitted suppressed market forces to work by phasing out price caps on wellhead natural gas prices. During the late 1970s and in the early 1980s, prices rose to meet high interim price caps as an incentive for drilling for more supply. By the latter half of the

<sup>5</sup> 15 U.S.C. 3301-3432

2003 NATURAL GAS MARKET ASSESSMENT

Figure 1: Natural Gas Market Growth and Price Moderation After Passage of the NGPA (1976-2002, in 2002 Dollars)

Sources: Energy Information Administration at [www.eia.doe.gov](http://www.eia.doe.gov), Bureau of Economic Analysis at [www.bea.gov](http://www.bea.gov)

The spot market for natural gas is not a market for commodity contracts that are sold in the future. It is a market for gas that is actually a market for gas and that is sold in the near future (usually the next day).

1980s, prices fell in direct response to oversupply. That oversupply lasted through most of the 1990s. Figure 1 tracks prices through this period, showing how they rose and fell.

Subsequent Commission orders that addressed evolving market conditions, including Order Numbers 380 (1984), 436 (1985) and 636 (1992), contributed to the efficient operation of market forces to benefit customers. Order 380 enabled utilities to purchase spot market gas, and Orders 436 and 636 provided for open access on pipelines, ended bundled pipeline sales service and introduced capacity release and other

innovative rate designs.

In 2000 and 2001, natural gas prices rose for slightly more than a year. That price pattern marked the end of more than a decade of oversupply within the production segment of the North American gas market, and it was driven by a variety of factors. These market-changing factors included a tighter supply-demand balance, regional occurrences of pipeline congestion and participant behavior, factors we will discuss in greater detail later in this assessment.

With the exception of the period of the price plateau, real wellhead prices have remained below those of the early 1980s. Figure 1 also shows that competitive markets have brought close to 20 years of moderate prices for gas delivered to the citygate. Importantly, competitive markets have increased the efficiency of long dis-

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

tance transportation. The wholesale delivery cost of natural gas – the difference between citygate and well-head prices – has fallen in real terms about 40 percent between 1984 and 2002, a compound reduction of 2.8 percent per year.

The Commission's Office of Market Oversight and Investigations (OMOI) has prepared this report to provide the Commission and the public with an assessment of current developments, trends and issues in natural gas markets. In particular,

OMOI explores the effectiveness of competition in natural gas markets and focuses on industry and government actions to address any problems or identified threats. This assessment does not release privileged information related to current investigations; it does discuss current issues and industry, regulatory and investigatory efforts to deal with these issues.

## The Issues

Based on our analysis, OMOI considers the five most pressing concerns for natural gas markets as of the winter of 2002-03 to be:

### 1. *Deteriorating financial conditions of market participants*

Natural gas companies heavily engaged in trading – in a trend shared with electric traders – are in the forefront of a traumatic financial shakeout. Many past leaders of energy trading are either out of business or retrenching. Their problems have adversely affected other natural gas companies as well. This serious financial situation could cause price increases and (in the longer run) delivery problems for natural gas customers. Thus far this winter, however, there have been no reports of significant delivery problems.

### 2. *Managing credit exposure*

Managing credit is one of the most important components of long-term financial health of energy market participants. Poor risk management of credit exposure contributed to recent financial problems. New approaches to managing credit that have not been extended to energy markets in the past are being introduced to natural gas

companies. Introducing these sophisticated new tools in effective ways will be critical for the successful control of risk associated with volatile natural gas prices.

### 3. *Shaken confidence in price discovery methods*

Reports of wash trades and intentional false reporting of transactions and prices by industry sources over the past half-year have undermined the credibility of published natural gas price indexes. Given the importance of these indexes to customer confidence as well as to the functioning of many natural gas contracts, the industry must respond effectively.

### 4. *Continuing need for efficient investment in infrastructure*

The natural gas industry requires ongoing investment to maintain adequate supply, delivery facilities and operational flexibility. As competitive markets for natural gas have evolved, they have provided a basis for investment designed to benefit customers and provide adequate returns from facilities' market value. Assuring adequate investment in infrastructure aligned with competitive market forces is a critical and continuing need for the natural gas industry.

### 5. *Continuing potential for manipulation*

The potential for manipulation of energy markets remains a concern. Without proper monitoring, the likelihood of successful manipulation could increase under the current tight supply conditions. Market manipulation can adversely affect the dependability, affordability and competitiveness of gas markets. Solutions require a commitment to vigilant oversight.

The remainder of this assessment will focus on each of these challenges. We document the issues and present highlights of current efforts by industry and the Commission to resolve them.

OMOI considers the issues facing the effective competitive functioning of the industry to be manageable. Both industry participants and regulators must seek out and aggressively promote solutions to assure efficient, cost-effective and reliable natural gas service to all U.S. customers.

2003 NATURAL GAS MARKET ASSESSMENT

Issue 1

# DETERIORATING FINANCIAL CONDITIONS OF MARKET PARTICIPANTS

**T**he energy sector faces unprecedented financial challenges. While initially affecting trading companies, financial stress has touched electric utilities, pipelines and distributors as well. In response to these new challenges, some companies have abandoned energy trading. Having fewer, less financially strong market participants could result in the less-efficient functioning of competitive energy markets. We will focus on the effects on natural gas markets, though these conclusions could extend to electricity as well.

## The Situation

Financial weakness currently extends across many industries. Every segment of the energy industry important to the Commission's jurisdictional markets has recently experienced difficulties. Figure 2 shows 2002 changes in stock prices for a group of 111 key market participants in the energy sector. Financial conditions for the energy sector overall deteriorated dramatically in 2002.

Problems for companies heavily engaged in natural gas trading are even greater than they appear in Figure 2. While Figure 2 groups companies by service, energy companies often tend to be integrated across fuel and activities. This point deserves a brief discussion. The group of companies identified as predominantly natural gas distributors has seen almost no reduction in share values, but these companies have not been at the forefront of natural gas trading. Pipelines ("mid-stream gas" in Figure 2) and electric wholesalers ("utility parent w/significant wholesale"), which were far more likely to be active in natural gas trading, have dropped substantially in value.

In 2001 and 2002, energy traders revealed a variety of improprieties in financial reporting and trading activity

The malfeasance initially associated with Enron, and to varying degrees with other specific energy trading companies, has led to the financial challenges that now confront the entire industry. Market discomfort remains, a natural response to uncovered deceptions and to numerous ongoing investigations of trading activity by government agencies.

The difficulties have cascaded to debt-holders, reducing company credit ratings. Rating downgrades by the major rating agencies – Standard & Poor's (S&P), Moody's and Fitch – recognize this financial stress and contribute to the challenge. Figure 3 shows the trend toward downgrades for energy companies by S&P.

There is potential for further financial instability stemming from the amount of energy-company debt scheduled to be renegotiated over the next few years. Figure 4 shows the maturities of long-term debt for selected classes of energy companies. Overall, about a third of long-term debt will mature for energy companies over the next five years, from 2003 through 2007. Short-term debt maturities will put additional stress on the system. It is likely that some companies will not be able to manage through these debt maturities and will fail. Many of these companies are active participants in the natural gas market.

To manage investor and debt-holder concerns about viability, many companies either withdrew from or announced reductions in energy trading activity in late 2001 and in 2002, including:

- |                  |                  |               |
|------------------|------------------|---------------|

2003 NATURAL GAS MARKET ASSESSMENT

Figure 4: Magnitude of Long-Term Debt Coming Due for Energy Companies in the Next Five Years

Source: OMDI groupings. Analysis of debt projections based on data from Bloomberg.

**Market liquidity:** Disturbances in the market with which a buyer can buy or a seller can sell at the prevailing price in a marketplace.

**Market power:** Includes the ability of a firm to raise its price or withhold its output with the effect of raising market prices above competitive levels for a sustained period of time.

Deterioration in the financial condition of energy companies has many serious implications for natural gas markets, such as:

**Companies ceasing natural gas trading can impair markets and cause higher prices for consumers.**

The reduction in the number of energy traders in the marketplace reduces market liquidity – the ability of a market participant to buy and sell readily in a marketplace at a prevailing price.

The reduction in the number of natural gas traders is particularly troublesome in the natural gas marketplace because there are so many regional markets, already somewhat illiquid due to fragmentation. Dividing these markets by fewer traders can give remaining traders

market power, permitting them to increase above competitive levels the difference between what they are willing to pay sellers and demand in payment from buyers. Some difference in prices paid and charged – the bid-ask spread – is necessary for traders to exist. In particularly thin markets, however, if a trading company increased the bid-ask spread beyond competitive levels, it could be exercising inappropriate market power.

**Reduced use of agency agreements can shift risk away from marketers and toward consumers.**

Through agency agreements (also known as asset management contracts), natural gas traders contract with gas purchasing companies such as natural gas distributors and electric generators to manage their fuel supply

**Bid-ask spread:** Is the difference in price between what a buyer will pay for a commodity and what a seller charges for it.

**Agency agreements:** Allow traders to manage their customers' natural gas assets as agents in exchange for the additional value they derive from them.

DETERIORATING FINANCIAL CONDITIONS OF MARKET PARTICIPANTS

portfolios, including pipeline transmission, storage assets, daily purchases and seasonal supply. These agreements allow natural gas purchasing companies and their customers to share profits derived from remarketing unused capacity and supply with the marketer. At the same time, the marketer assumes some of the associated price risk and ensures availability.

Competition for agency agreements among marketing companies had, until the recent collapse of the business, been intense. But as merchants abandon wholesale trading, the number of asset management arrangements between trading companies and distribution companies is declining.<sup>6</sup> This decline will shift many of the risks the marketers had been bearing back to their customers, many of whom may not have the necessary risk management skills. Depending on the trading ability, planning skills, regulation and financial incentives of utility staff, price risks to end-use customers may increase.

*Constrained finances could lead to deferral of necessary infrastructure maintenance, harming reliability.* As we have seen, energy companies often are integrated across functions, so energy traders often have pipelines or electric utilities as affiliated companies. There are indications – most recently from Williams<sup>7</sup> – that trading-related financial problems can cause personnel cut-backs in regulated affiliates. Lack of maintenance could decrease service or safety.

*Constrained finances could lead to deferral of infrastructure builds.* The erosion in industry funding may eventually hinder development of additional energy infrastructure. Recent credit downgrades mean higher interest rates and costlier projects. Energy companies are finding it difficult to complete costly new power plant projects. Delays and cancellations have increased.<sup>8</sup> These delays and cancellations can affect the efficacy of pipeline expansion.

## Actions

 Both industry and government agencies can help resolve financial issues related to natural gas companies

<sup>6</sup> OMOI conversations with multiple market participants in fall 2002 and winter 2002-03

<sup>7</sup> "Williams Cutting Jobs at Pipelines Amid Losses at Trading Units," Bloomberg News Wire, November 27, 2002

<sup>8</sup> "U.S. Energy Sector Has Hit a Credit Crisis, S&P Reports," Rebecca Smith, *The Wall Street Journal*, October 14, 2002

## Industry Actions

Where possible, market participants are working constructively to address their own deteriorating financial condition as well as manage deterioration in the financial strength of the companies with which they do business. These efforts include:

*Improving finances.* Natural gas players are cutting costs, renegotiating debt, selling assets and making other adjustments to improve financial strength. Many have announced asset sales, raising concerns that forced sales may be under-valuing these assets. However, firms with strong finances are acquiring good assets. For example, Mid-American Energy Holdings (owned by Berkshire Hathaway) purchased two large pipelines in 2002, the Kern River Gas Co., from Williams, and Northern Natural Gas Pipeline, a former Enron asset, from Dynegy.<sup>9</sup>

*Developing best practices for energy trading and general business behavior.* Since late spring 2002, industry has sponsored several efforts to improve industry performance in energy trading. These include:

► Chief risk officers from more than 30 integrated energy companies (most of which have energy merchant arms) formed the Committee of Chief Risk Officers (CCRO) to develop recommendations for best practices.<sup>10</sup> Among the CCRO's recommendations are financial disclosures more informative than the minimum required by the Securities and Exchange Commission (SEC), enhanced approaches to managing credit among traders, active use of state-of-the-art approaches to monitoring the risks taken on by corporations through energy trading and strict governance and control procedures.

► In June 2002, the Electric Power Supply Association (EPSA) launched an initiative directed by a high-level steering committee to describe and codify ethical standards for the power supply and trading industry. EPSA will require certification of these standards as a condition of membership.<sup>11</sup>

<sup>9</sup> Berkshire Hathaway has indicated that it has \$10 billion to invest in energy assets. See "Editor's Notebook," Jeff Share, *Pipeline & Gas Journal*, January 2003

2003 NATURAL GAS MARKET ASSESSMENT

► Seven brokers formed the Energy Brokers Association<sup>12</sup> to establish best practices and standards of conduct and to engage in other efforts to help restore confidence in the energy financial markets.

**Increased use of exchanges.** Initially, natural gas trading took place between buyers and sellers on telephones. In 1990, the New York Mercantile Exchange (NYMEX) introduced natural gas futures trading with a product associated with an existing liquid cash market at Henry Hub in Louisiana. Other attempts at exchange-traded futures contracts for natural gas have failed, but the Henry Hub contract remains and the terms of its trading contracts continue to lengthen, indicating greater faith by participants in this forward market.

NYMEX saw a record year in 2002 for natural gas futures volumes; more contracts were traded than for any other physical commodity but oil. The year-over-year increase in trading natural gas futures contracts was 48 percent, rising to 24.4 million contracts traded. The high level of trading is a positive sign for natural gas, possibly

<sup>12</sup> The seven are Amerex, AFB Financial, GFI Group, Natsource, Prebon Energy, Starsupply Petroleum and TFS Energy. Further information is available at [www.energybrokersassoc.org](http://www.energybrokersassoc.org).

signaling a move by remaining natural gas traders away from the telephone and toward the visible, secure trading of a regulated exchange.

Other NYMEX trading data yield mixed signals.

Figure 5 shows the level of open interest in the NYMEX

Henry Hub natural gas market at the opening of each month in 2001 and 2002. Open interest is a good measure of how actively companies are participating in the futures market.

Figure 5 shows that open interest in a month-to-month comparison has been higher in the first half of 2002 compared to 2001 and lower in the second half of 2002 compared to 2001. The pattern suggests that natural gas market participants began to reduce their activity in April 2002, four months earlier than the apparently seasonally driven reductions starting in late 2001.

In August 2000, a number of active energy traders launched the IntercontinentalExchange (ICE), which manages trading of a variety of physical natural gas and electric contracts<sup>13</sup>. ICE reports more than 100 equity partners, including energy and metals traders, brokers and

**Figure 5: Recent Relative Decline in Nymex Natural Gas Open Interest**

Source NYMEX

**DETERIORATING FINANCIAL CONDITIONS OF MARKET PARTICIPANTS**

bankers. ICE also reports that its trading system is installed on more than 6,000 desktops, with the capability to trade more than 600 products in metals, petroleum, natural gas and power<sup>14</sup>. Figure 6 shows the activity in natural gas volumes traded on ICE.

**Encouraging new entrants.** New entrants, mainly financial players, are increasing their energy trading activity to provide risk management services and liquidity, supplementing the physical deliveries and energy trading of asset-based marketers. Banks and brokerage firms have financial stability, good credit ratings and cash, reducing

the need for large borrowing and debt levels. They also have hedging and trading experience with other commodities that can be leveraged into diversified energy markets. Other advantages they bring include experience with regulatory bodies and tight risk control processes. Companies increasing their activity or entering energy trading include:

- ▶ American International Group
- ▶ Bank of America
- ▶ Centarus Energy
- ▶ Citadel
- ▶ ConocoPhillips
- ▶ Credit Lyonnais
- ▶ Goldman Sachs
- ▶ Louis-Dreyfus
- ▶ Morgan Stanley
- ▶ RWE

<sup>13</sup> ICE's original equity partners included BP Exploration & Oil Inc., Deutsche Bank Sharps Fixley Inc., Goldman Sachs Group Inc., MS Capital Group Inc. (Morgan Stanley), Societe Generale Financial Group, ST Exchange Inc. (Royal Dutch/Shell Group) and TFE Investment Inc. (TotalFinEl). It was later joined by AEP Energy Services, Aquila Southwest Processing LP, Duke Energy Trading Exchange LLP, El Paso Merchant Energy Holding Co., Mirant Americas Energy Marketing LP and Reliant Energy Trading Exchange Inc. ICE acquired London's International Petroleum Exchange (IPE) in mid-2001.

<sup>14</sup> www.intcx.com/about.html.

The positive effects of this new participation do not yet represent successes that balance the recent failures of trading leaders. OMOI expects that the services provided by the new entrants will be more expensive than past offer-

**Figure 6: Growth in Physical (Day-Ahead Henry Hub) Natural Gas Volumes Traded on ICE Was Affected by Trading Downturn**

Note: ICE trades at areas other than Henry Hub, but because Henry Hub has existed the longest, OMOI is using it as a representative point to illustrate our line of reasoning.

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

ings because they will likely incorporate more realistic credit risks into prices. Companies such as Enron and Dynegy were determined to create liquid markets in energy necessary for meeting their growth projections and profitability.

Together, these industry actions indicate a significant effort to address the financial challenges that natural gas markets face today. As long as that commitment continues, it provides a positive indication that these issues can be resolved.

**Commission Actions.**

Within the scope of its authority, the Commission seeks to play a positive role in the resolution of these financial issues. As the year progresses, the Commission plans the following actions to address deterioration in the financial condition of natural gas market players:

*The Commission will continue to make policy as necessary to address the ramifications of the deteriorated financial condition of the industry.*

*Recent efforts include:*

► Development of guidance on cash-management practices between regulated subsidiaries and their parent companies.

► Establishment, on a case by case basis, of the credit-worthiness standards that interstate pipelines may require in their tariffs.

*The Commission will continue to monitor the financial health of natural gas companies, with significant consideration of the implications of financial difficulties on the safe and dependable delivery of natural gas to customers.*

*OMOI will continue to monitor the behavior of natural gas markets, with particular concern for the reduction of market liquidity due to exits from natural gas trading and with attention to the potential for parent companies that are in financial straits to undermine the financial strength of unregulated subsidiaries.*

2003 NATURAL GAS MARKET ASSESSMENT

Issue 2

MANAGING CREDIT EXPOSURE

**C**redit management approaches used in financial markets – approaches not extended to energy markets in the past – are being adapted and used in natural gas and electric markets. Given the large cash flows associated with energy contracts, managing credit well is one of the most important drivers of long-term financial health of energy traders. Using credit tools in effective ways will be critical for success.

While generally valuable, some of these new approaches are not well understood and their misuse could have unintended consequences. In particular, certain uses of credit clearing techniques have more limited benefits than is generally understood by energy-market partici-

pants. The first step toward a better credit management structure for the industry is better understanding of the available tools.

The Situation

One novel credit tool is over-the-counter (OTC) credit clearing. OTC transactions are not traded on exchanges, but are negotiated between two parties. Table 1 compares over-the-counter trading to exchange and bilateral deals. However, unlike other contracts negotiated between buyers and sell-

Table 1: Characteristics of Types of Trading

Bilateral	OTC	Exchange-Based
Contracts are negotiated directly between the two contract counterparties.	Contracts are negotiated via a broker who helps the two parties find each other and reach agreed terms.	Deals are made through a multilateral exchange, which provides a managed marketplace
<ul style="list-style-type: none"> <li>▶ Contracts are often highly customized, and of long duration.</li> <li>▶ Trading counterparties are known to each other.</li> <li>▶ Pricing is opaque</li> <li>▶ Execution is lengthy and expensive.</li> <li>▶ Credit protections are customized and negotiated as part of the contract.</li> </ul>	<ul style="list-style-type: none"> <li>▶ Contract parameters can vary significantly, though customization is generally allowed.</li> <li>▶ Anonymity of trading varies widely.</li> <li>▶ Pricing is opaque</li> <li>▶ Execution time and cost can vary significantly.</li> <li>▶ Credit protections are customized and negotiated as part of the contract.</li> </ul>	<ul style="list-style-type: none"> <li>▶ Contracts are highly standardized.</li> <li>▶ Trading is anonymous.</li> <li>▶ Execution is quick and cheap.</li> <li>▶ Processes often exist to safeguard market integrity.</li> <li>▶ Credit exposure is to the exchange member, who is protected from other members through mandatory credit clearing mechanisms</li> </ul>

Source: Office of Market Oversight and Investigations

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

ers – known as bilateral contracts – OTC trades are sufficiently standardized that they can be assigned readily to others.

Until recently, market participants relied on the credit quality of their counterparties to back each bilateral transaction. Not many used contractual provisions to net transactions between counterparties to limit financial exposure to each other.

Even fewer used a central clearing entity, or clearinghouse, to do multilateral netting to further limit credit exposure, where the

clearinghouse would be backed by an entire group of financially strong clearing or participating members.<sup>15</sup> However, the International Swaps and Derivatives Association (ISDA), the Edison Electric Institute (EEI) and other industry groups have recently developed standardized agreements to enable greater use of bilateral netting across multiple transactions to limit exposures between two counterparties.

(EEI) and other industry groups have recently developed standardized agreements to enable greater use of bilateral netting across multiple transactions to limit exposures between two counterparties.

OTC credit clearing is still in its formative stages in the United States, having been established by the Commodity Futures Modernization Act of 2000. Since

early 2002, Nymex and ICE have offered OTC credit clearing services for transactions executed in OTC markets in addition to their exchange-traded energy services. According to NYMEX representatives who spoke with OMOI staff, from May 31 through the end of 2002, Nymex cleared more than \$5 billion

worth in notional value of transactions that were executed in OTC markets and converted into futures contracts during the NYMEX clearing process. Similarly, ICE representatives stated that, starting in March, ICE cleared notional value surpassing \$16 billion through year-end. Start-ups EnergyClear and Virtual Market Assurance Corp.

<sup>15</sup> Communication with WJ Berger, graduate student, Harvard Business School

(VMAC) also began offering clearing services jointly.<sup>16</sup> Table 2 summarizes the main features of these three offerings.

NYMEX and ICE have introduced many new OTC credit clearing products.<sup>17</sup> They include clearing services for longer-term contracts, energy at a variety of geographical locations and options. The expansion of these services has the potential to significantly increase the value of tools available to energy traders and customers to manage their risk.

There are several market implications of the introduction of new methods for managing credit exposure in the energy industry, such as:

*Traditional methods of managing credit exposure that rely on the credit quality of counterparties are being supplemented by new methods and increasing the robustness of credit management in the energy industry.* The traditional method of credit management failed when many major energy counterparties either went bankrupt or could no longer meet their obligations due to debt downgrades. As a result, the quantity of energy trades has been severely reduced, resulting in a less-liquid and less-efficient market. New methods for managing risk can reduce the likelihood of contract failure due to credit failure. In its white paper, CCRO estimated that companies can save 75-90 percent of the collateral required to support transactions by going to this type of credit clearing from historical approaches embedded in bilateral contracts. The result would increase credit-related transaction capacity several times, allowing for improved market liquidity.<sup>18</sup>

*Credit clearing mechanisms can serve market participants and markets well but market participants need to be aware of the limitations of clearing mechanisms and the differences between the services offered by alternative clearing organizations.* One limitation concerns the limited benefits for nonmembers. A clearinghouse only protects members from the financial failure of other members. Some clearinghouses allow nonmembers to conduct business on the clearinghouse through members. If any side of the transaction experiences financial failure, all sides of the transaction

are protected except the nonmember. Consequently, energy companies using an exchange with clearing by contracting through a clearing member must understand that they are *not* protected if the clearing member they are working with defaults.

Another limitation results from the need to adapt traditional clearing to energy markets. Traditional clearing settles transactions purely financially. Energy market participants typically demand physical delivery guarantees. Clearinghouses are working with market participants to develop new instruments that mitigate the risks associated with this mismatch between physical and financial delivery.

## Actions

 The energy industry must become more familiar with sophisticated credit tools. The Commission can help by bringing knowledgeable experts together to discuss these tools.

## Industry Actions.

**Education.** The energy industry is already making use of credit clearing mechanisms in its interactions with NYMEX, ICE, EnergyClear, VMAC and others. Industry players need to master these tools and report on their use

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

effectively as part of their financial statements.

Legal disputes between some of the leaders (NYMEX and ICE) may hinder progress in this area.

Potential providers of clearing services and energy market participants still need to clarify market needs and craft products and services to meet those needs.

---

**Commission Actions.**

*The Commission is co-sponsoring a technical conference on credit and credit clearing issues with the Commodity Futures Trading Commission early in*

*2003.* The purpose of the conference is to encourage further self-help on the part of energy industry and promote dialogue among energy industry stakeholders. The conference also will help the Commission assess its future role in clearing and other credit-management solutions as they affect the effective functioning of the energy markets.

*The Commission will offer its Alternative Dispute Resolution Services to resolve the NYMEX-ICE dispute.*

*The Commission also will monitor the use of new methods for managing credit exposure and showcase positive developments.*

2003 NATURAL GAS MARKET ASSESSMENT

Issue 3

# SHAKEN CONFIDENCE IN PRICE DISCOVERY METHODS

**R**ecent revelations about price indexes and related false reporting by industry have contributed to a crisis of confidence in price discovery. Reports of traders lying to the energy trade press – which compiles and publishes numerous price indices – with the intention of manipulating natural gas prices and volumes have undermined confidence in the industry.

No serious alternative to the trade press-developed price index system exists today. The trade press has not provided adequate details about price development to reach a public interest standard of use by the Commission, citing their First Amendment constitutional rights. Notably, major players appear to have been aware of and have provided for limitations inherent in the price indices. Smaller players, both buyers and sellers, have been disproportionately affected by the recent revelations.

Increasing numbers of natural gas traders have announced that they will not contribute price information to the trade press in fear of lawsuits alleging inaccurate prices.<sup>19</sup> This response is particularly counterproductive because it does not solve central process problems but does reduce meaningful price information. A critical component of any natural gas price discovery solution is the broadest possible participation.

<sup>19</sup> Foster Electric Report, "Platts Nounceably Absent from Meeting of Energy Companies and Trade Publications to Devise Appropriate Price Reporting Guidelines," December 11, 2002

## The Situation

■ A key product of any effective market is accurate information about the prevailing price in that market. This revelation of price information – price discovery – helps customers determine the cost of meeting their needs, helps sellers determine the value of their investment and, when working correctly, efficiently allocates resources to the customers who most value them.

The energy trade press creates natural gas price indices through systematic polling of market participants known to each publication. The quality of these indices depends on the quality of the particular processes used by the trade press when polling participants, as well as the number of active participants trading at a given price point. A drawback of the reported approaches are that the traders who traditionally provide the price quotes often have had financial incentives to influence market prices and behavior. The trade press attempts to adjust for this conflict of interest by using median and average prices to compensate for irregularities or by throwing out outlying price quotes – those that, without explanation, are significantly different than other prices gathered – that may be intended to move the market.

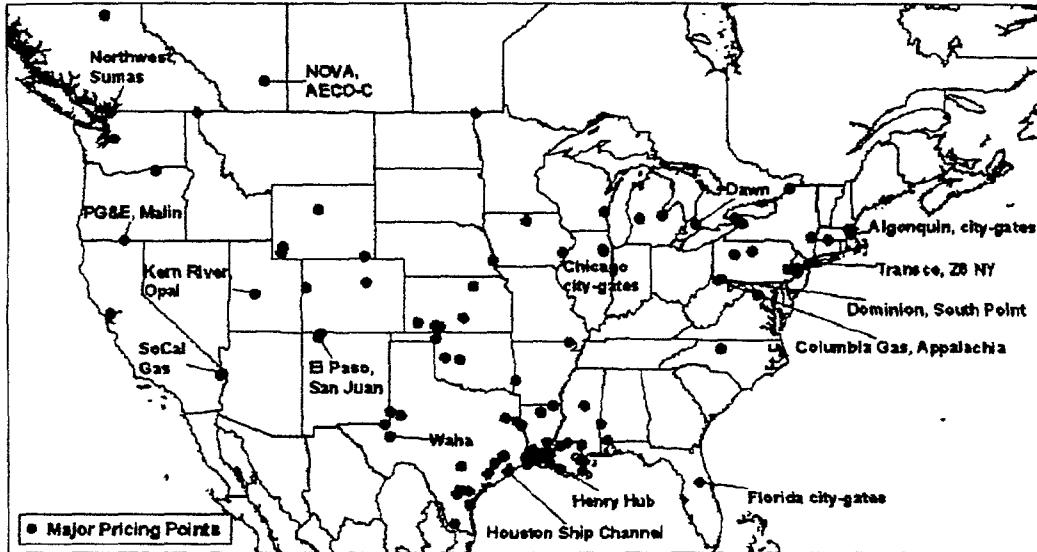

Confidence in indices has weakened with recent allegations and admissions of false reporting of price and volume information. It is not yet possible to quantify the harm caused by false price reporting to index publishers or the extent to which prices might have been distorted. However, doubt has been cast on available price index results.

Accurate and credible price indices for natural gas are crucial because they serve as the basis for many natur-

2003 NATURAL GAS MARKET ASSESSMENT

Figure 7: Selected Natural Gas Pricing Points in North America

Source: GASdat map based on *Gas Daily* pricing points

al gas and electric transactions across the United States.

Natural gas price indices are also difficult to monitor for accuracy because there are so many such indices. There is no one national market for natural gas; there are many regional markets. These markets contain hundreds of price points, including many market hubs, some of the most significant of which are shown in Figure 7.

Price discovery and pricing at hubs has never been completely transparent and some pricing points are more actively used for trading than others. For example, a recent study completed by Energy and Environmental Analysis on behalf of several New York natural gas distributors identified only three hubs that meet their definition of adequate liquidity in the Northeast: Columbia-Appalachian Pool; Dominion-South Point; and Dawn, Ontario.

The study defined "adequate liquidity" as "more upstream capacity than downstream, sufficient volumes at peak periods and year round, more than one pipeline serving the point, presence of storage and electronic trading at the point, reported price indexes, narrow bid-ask spread and sufficient volumes and numbers of buyers and sellers."<sup>20</sup>

<sup>20</sup> Energy and Environmental Analysis, "Analysis of Natural Gas Market Liquidity at Points Affecting New York State LDCs," preliminary draft prepared for the New York Gas Group, November 2002. Final report expected February 2003.

While we might not define liquidity in exactly the same way, the point remains broadly valid. Multiple pricing points will tend to challenge liquidity and, therefore, effective price discovery. On the other hand, as the trade press states, all price points are included because a sufficient number of market participants asked for that point to be included in a list of indices.

The implications for the market of decreased confidence in natural gas price indices include:

**Concerns surrounding price indices may lead to the unraveling of existing natural gas contracts.** If parties question the validity of the data upon which their contracts are based, they may attempt to dissolve contracts. Without an alternative price discovery mechanism, they would be left without a market basis for determining prices for new contracts.

**Concerns surrounding price indices may affect the willingness of parties to enter new contracts.** If parties are reluctant to enter into new contracts, the efficiency of gas markets and dependent electric markets could decrease. Disarray in natural gas price discovery could hinder traders, suppliers and customers from entering the market and creating liquidity. The result could be a dysfunctional system.

## Actions

While the Commission can play a supporting role here, industry must develop and implement effective solutions to the current crisis. Both industry and Commission actions are discussed below.

### Industry Actions.

Industry has taken confidence problems with natural gas price indices quite seriously. The most visibly constructive efforts include the following:

**Developing best practices for price reporting.** The CCRO is working on best practices for reporting natural gas prices with the hope that recommendations will be available for adoption by industry participants within the first quarter of 2003.

The Coalition for Energy Market Integrity and Transparency (EMIT), which includes independent natural gas producers, royalty owners, electric generators, energy distributors, consumers and others, has issued a challenge to the industry to produce a list of protocols publishers should follow in reporting and publishing prices.<sup>21</sup>

Some trade publications themselves are actively reviewing their price index development procedures to look for ways to increase confidence.

**Shifting transactions to exchanges, where prices are more transparent.** As noted in the discussion of the financial difficulties of market players, exchange-traded markets, such as ICE, have added new volume. To the extent that this creates more price information, it is a good sign. Price and trading information at NYMEX is transparent, in part because of its regulation by the CFTC. The transparency of price and trading information from ICE is less clear. ICE has begun marketing its price and volume data online under its brand name "10x." This pricing service may, in time, compete with the trade press. Because its regulatory requirements are different from NYMEX, however, it does not provide the same level of information to regulators as NYMEX.

### Commission Actions.

*On January 15, 2003, staff reported concerns*

<sup>21</sup> Federal Energy Regulatory Commission, presentation by Arthur C. Corbin on behalf of Coalition for Energy Market Integrity and Transparency, October 25, 2002, at [www.ferc.fed.us/gas/10-25-02-conl/EMIT-STATEMENT.pdf](http://www.ferc.fed.us/gas/10-25-02-conl/EMIT-STATEMENT.pdf).

*regarding price index formation to the Commission at its open meeting.* In addition to reviewing the current situation, staff explained the Commission's interest in price index formation, reviewed the public evidence that raises questions about price index formation, defined the high-level criteria important to developing trustworthy price information in the future and proposed some next steps.

Specifically, the Commission approves pipeline tariffs that refer to market price data. There are three areas where these references tend to happen:

**Cash-out provisions.** On most major pipelines, when deliveries and receipts of natural gas are not in balance, the differences may be valued and sold to the shipper or purchased by the pipeline using market price information. These cash-out provisions allow the industry to quickly and efficiently account for and eliminate imbalances.

**Penalties.** In the determination of pipeline penalties, the Commission sometimes allows pipelines to use market prices to deter shipper conduct that could threaten system operations.

**Basis Differentials.** Many negotiated rate transportation contracts establish transportation rates using the basis differentials between two or more price index trading points.

Staff proposed that in the future, the Commission require that natural gas price indexes meet certain minimum standards before natural gas pipelines are permitted to use these indexes in new tariffs or for other new regulatory purposes.

Staff proposed that evidence for these new filings would need to be presented and reviewed to assure that any referenced price index meet minimum index formation standards. In particular, the index would need to accurately reflect the market. For approval, a new tariff containing a reference to an index would need to demonstrate:

1. Confidence in the accuracy of price reporting – that is, the ability to verify that reporting is for deals actually done, not simply aggregate opinions.
2. Adequacy of coverage – that is, the ability to assure the collection of adequate information to represent prices across the relevant marketplace.
3. Information about market liquidity or some insight into

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

how much trading is going on at a particular point in order to generate warnings when markets are thin and confidence when they are liquid.

4. Verifiability – that is, the ability to assure integrity of the process through independent review by a trustworthy third party (preferably not by a governmental entity).

Staff suggested that only after assuring the Commission that these characteristics have been met should a natural gas price index be approved for use in a new pipeline tariff.

*The Commission is analyzing natural gas price index issues in its Fact-Finding Investigation of Potential Manipulation of Electric and Natural Gas Prices in Western Markets (Docket No. PA02-2-000).*

On August 13, 2002, Commission staff made the initial report public. Staff inquired into the characteristics of publicly-reported price indices, including natural gas spot prices at California delivery points used in the California refund proceeding. Staff found significant problems with published price indices. The Commission response will depend in part on the findings of its fact-finding investigation. That investigation task force reported a number of price index concerns in 2002. The Commission has announced its intention to conclude this investigation in early 2003.

*At the direction of the Commission, OMOI has begun planning a technical conference to address price index issues.*

2003 NATURAL GAS MARKET ASSESSMENT

Issue 4

# CONTINUING NEED FOR EFFICIENT INVESTMENT IN INFRASTRUCTURE

**D**espite its current financial problems, the natural gas industry requires continued investment to maintain adequate supply, delivery facilities and operational flexibility and safety. The challenge to the industry is to maintain adequate, efficient levels of investment in a competitive environment.

Competitive natural gas markets created more than a decade of moderate wholesale natural gas prices following the decontrol of significant volumes of wellhead prices in January 1985, which provided an enormous benefit to natural gas customers. To achieve these benefits, competitive forces restructured the way the industry functions. One change has been the direct linkage of investment to market signals.

In the 1960s and early 1970s, the federally regulated interstate market combined with the deregulated intrastate market created a dysfunctional dichotomy that led to shortages of delivered natural gas in the interstate markets in the mid-to-late 1970s and adequate supplies in major intrastate markets. That failure to serve interstate customers, especially during the harsh winter of 1975-76, became the impetus for Congressional passage of the Natural Gas Policy Act of 1978 (NGPA), which provided for the phased decontrol of the wellhead price of gas, starting substantially in January 1985.

Natural gas markets since the NGPA was passed have provided an investment environment that has benefitted customers and provided adequate returns for the gas industry. Regulatory policy continues to play a significant role as well,

encouraging investment when necessary. For instance, to stimulate investment, the Commission recently signaled it will set a new policy in regulating new liquefied natural gas (LNG) projects where markets are competitive and other criteria are met.<sup>22</sup>

## The Situation

In this section, we will address the challenge that current prices pose for developing gas supplies, the challenge of shifting supply and demand for maintaining sufficient transmission and delivery infrastructure, and the need for additional infrastructure as a result of current levels of operational flexibility.

## The Challenge that Current Prices Pose for Developing Gas Supplies

Price levels this winter have increased because of tightened market conditions due to a return of incremental heating load as compared to last year's unusually warm winter (the fifth warmest winter since records began in the late 1800s).<sup>23</sup> Without the threat of a supply shortage, the sustained early cold of the winter of 2002-03 created support for natural gas prices in the \$4 to low \$5/MMBtu range at Henry Hub. November 2002 was 11

<sup>22</sup> In a preliminary determination on December 18, 2002, to approve the Hackberry LNG project in Louisiana, the Commission said it would not require Commission-approved cost-based rates or an open-access tariff for the new LNG terminal service because its sponsors will bear the full economic risk of the project and customers will not be adversely affected by the project's costs. This approach is expected to remove economic and regulatory barriers to the development of onshore LNG import terminals (Docket No. CP02-374-000, et al.)

<sup>23</sup> [www.noaa.gov/stories/s878.htm](http://www.noaa.gov/stories/s878.htm).

2003 NATURAL GAS MARKET ASSESSMENT

Figure 8: Natural Gas Futures Prices Show Declining Pattern for the Next 3 Years

percent colder than November 2001 and storage withdrawals this heating season reached 728 Bcf at the end of 2002 (December 31) versus 265 Bcf at the end of 2001.<sup>24</sup>

As shown in Figure 8, however, market participants appear not to expect that the current high prices will last. NYMEX futures prices for delivery of natural gas over the next three years show prices generally lower each year for the same month. This is a futures market phenomenon

known as backwardation, which indicates that support for higher prices is short term.

The challenge then is for the industry to continue to invest in natural gas exploration and production in this shifting price environment. There is general consensus among industry observers that gas supply should be adequate to meet

demand this winter.<sup>25</sup> However, there are lingering concerns – and some mixed predictions – about the outlook for U.S. gas production, imports and total gas supply.

The Energy Information Administration (EIA) last November expected dry gas production plus imports to decline slightly for the fourth quarter of 2002 and first quarter of 2003 as compared to the same periods in 2001 and 2002.<sup>26</sup> By January, however, EIA was predicting slight increases for those quarters as well as slight but steady annual increases in production and imports for 2003 and 2004.<sup>27</sup> Some financial analysts reviewing quar-

Backwardation is the situation in futures markets where prices for a commodity for delivery in future months are lower than for the near months.

<sup>24</sup> Energy Information Administration

<sup>25</sup> Sources of information underlying this broad assessment include the Energy Information Administration, *Short-Term Energy Outlook*, December 2002; Cambridge Energy Research Associates, "CERA Monthly Briefing: High Anxiety," December 17, 2002; Natural Gas Supply Association, "NGSA Expects Upward Pressure in the Natural Gas Market This Winter," press release, September 19, 2002; American Gas Association, "Natural Gas Supply Fundamentals for Winter 2002-2003," October 1, 2002

<sup>26</sup> Energy Information Administration, *Short-Term Energy Outlook*, November 2002.

CONTINUING NEED FOR EFFICIENT INVESTMENT IN INFRASTRUCTURE

**Figure 9: Prices and Drilling Interact Over Time  
(Natural Gas Prices and Natural Gas Drilling Rigs, 1987—2002)**

Sources: Baker-Hughes rig count from Bloomberg; Energy Information Administration, "Average Natural Gas Prices: U.S. Natural Gas Wellhead Price (\$/Mcf)," 1976-2002

terly filings last fall predicted production declines (year-on-year) of 5 percent to 6 percent, or an annual differential of almost 1.2 to 1.4 Tcf.<sup>27</sup> In January, EIA estimated that 2002 U.S. gas production would be down only 30 Bcf, or 0.15 percent, from the 2001 level.

Figure 9 shows that the overall number of drilling rigs searching for natural gas today has increased over time but decreased recently. This pattern does not raise as much concern as it might have in the past given the increased efficiency in the exploration and production sector. Nevertheless, exploration and production activity deserves continuing attention.

Current price patterns have several implications for natural gas infrastructure, such as:

*Prices in competitive natural gas markets change more quickly than drilling decisions, resulting in price cyclicality.* Figure 9 shows this tendency, common to many commodities. Cyclicity of natural gas prices results from a lag between the time the market signals a demand increase and the time it takes to increase supply through drilling and related development. In the short term, supply remains tight even though demand has risen, leading to higher prices. Later, as additional capacity is added, supply outstrips demand, driving down prices. As long as natural gas is considered a basic need, that cyclicality in prices will have a negative effect on customers' perceptions of reliability, price and fairness

*Competitive natural gas markets show volatility when demand and supply are closely balanced.*

**Volatility is a measure of how much uncertainty there is about a price and is usually expressed as the rate of change in a price over a specified period of time.**

<sup>27</sup> Energy Information Administration, *Short-Term Energy Outlook*, January 2003.

<sup>28</sup> Salomon Smith Barney, "Exploration and Production, Third Quarter 2002 Preview," October 3, 2002, and Lehman Brothers, "Oil & Gas: E&P (Large Cap)," October 25, 2002.

2003 NATURAL GAS MARKET ASSESSMENT

In the short term, sharp increases in demand result in sharp increases in price. In the short term, price spikes can be painful for customers just as short-term price drops are painful for producers. In the longer run, higher prices result in new supplies being developed. Customers and producers can manage price volatility by obtaining fixed prices or engaging in other forms of risk management.<sup>29</sup>

### The Challenge of Shifting Supply and Demand for Maintaining Sufficient Delivery and Transmission Infrastructure

The demand for natural gas supply shifts geographically as load centers grow or shrink in size and industrial and other uses of natural gas contract or increase. Similarly, the location of natural gas supply can shift over time. For instance, offshore Gulf of Mexico supply has increased recently while on and near shore Gulf of Mexico supply has decreased. These shifts in supply and demand can result in the need for expanded natural gas transmission capacity.

Places where delivery capacity is limited generally signal any tightness through prices. The difference between prices in different places is a useful indicator of

the value of moving natural gas from one place to another. These differences are known as "basis" – a term that refers to the difference in prices between any two markets. In the U.S. natural gas industry, basis usually refers to geographical differences and typically reflects the value of gas transmission between those points (see Figure 7 for some illustrative geographic locations).

Shifts in supply and demand have resulted in several regions that are now short of transmission capacity. These regions include:

► **The Rockies**, which produces more natural gas than it uses. Pipeline capacity from the Rockies has not kept pace with productive capacity. Consequently, prices tend to be low and drilling incentives reduced. The resulting basis differential for natural gas from the Rockies has encouraged new pipeline capacity from the Rockies to California,

<sup>29</sup> Natural gas price volatility and the use of risk-management techniques to manage it were discussed extensively in General Accounting Office, *Natural Gas: Analysis of Changes in Market Price*, December 2002 (Report No. GAO-03-46)

including a recent doubling of Kern River with expected completion by the second or third quarter of 2003 (under a new owner). Northwest Pipeline is improving its ability to transport gas to the Northwest to compete with volumes flowing from Canada. At least four new and similar pipelines have been proposed in the Rockies to move natural gas eastward; however, none has yet filed at the Commission for certification.

► **The New York metropolitan area** may need additional capacity to meet its demand. Analysis of capacity resale, or capacity release for pipelines serving the region, shows that transportation values have been high in recent winters, indicating some tightness in capacity.<sup>30</sup> To continue to meet potential demand growth, at least one of the proposed (or similar) pipeline projects into the city would need to be built. However, annual average basis differentials from both Chicago and Niagara to New York City do not yet support the projects. Until the market can support making the binding capacity commitments necessary for financing a project, the viability and timing of any proposals remains uncertain

► **Other areas in the Northeast** may face capacity constraints as well. Tennessee Gas Pipeline Co. declared five emergency orders during the winter of 2001-02 in its Northeast market area. Tennessee received requests for gas flow in excess of available capacity, limiting the availability of interruptible service to New England and New York City. Analysis of Texas Eastern into New York, Pennsylvania, New Jersey, Delaware, Maryland and Virginia shows that capacity release prices were high during the colder-than-normal winter of 2000-2001. This winter, several pipelines in the Northeast, including Tennessee, Algonquin, Transco and Texas Eastern, have

<sup>30</sup> Staff gathered and analyzed a considerable amount of data on capacity-release transactions over the two-and-one-half year period that the maximum rate ceiling for short-term releases was waived and published its analysis in a paper posted on the Commission's Website (May 30, 2002). Docket No. PL-02-4-000. The staff paper was intended to solicit comments regarding the price ceiling for short-term released capacity. Among the many points raised by commenters, several stated that the value of released capacity could be an indicator of additional capacity needs, arguing that releases made above the cap could signal that capacity is tight in that region at that time. Conversely, these commenters suggested that if capacity is not released above the cap, this could indicate that sufficient capacity exists during that particular time. Data on capacity release were downloaded from pipeline databases.

CONTINUING NEED FOR EFFICIENT INVESTMENT IN INFRASTRUCTURE

**Figure 10: Gas Markets Move Toward Just-in-Time Delivery System for Natural Gas (AGA Graph of Gas Production compared to Capacity from 1995 through 2002)**

Source: American Gas Association

restricted services at times. Restrictions have included little or no authorized overrun service, reduced tolerance for imbalances and a variety of warnings to shippers to stay in balance or be subject to operational flow orders.<sup>31</sup>

► **Areas in the Southeast**, including parts of the Carolinas, Georgia and Florida, indicate some tightness in capacity. Analysis of capacity release data for Transco into the Carolinas and Georgia shows that the values for capacity release were high in the past two winters. In addition, Transco issued a number of constraint notices last winter limiting the availability of interruptible transportation service into an area stretching roughly from Alabama through Northern Virginia.

► **Florida**, though a summer peaking market for natural gas deliveries, has experienced winter price spikes due to a lack of storage on Florida Gas Transmission combined with the demand for gas to meet heating load in other downstream markets.

**Constrained areas are prone to price spikes and more susceptible to manipulation than non-con-**

<sup>31</sup> Multiple trade press references including *Gas Daily*, *Natural Gas Intelligence* and *Bru Daily Gas Wire*

**strained areas. Both scarcity-related price spikes and manipulation can reduce consumer confidence in markets.** The price spikes will continue because of the high cost of building infrastructure to meet peak demand rather than some variation of average anticipated demand. Most customers would not opt to pay the high premium cost in order to avoid the occasional price spike. Nevertheless, despite such a rational economic decision, the presence of price spikes is inefficient for market participants until demand responses are facilitated.

### The Need for Additional Infrastructure as a Result of Current Operational Efficiency

The same forces that have produced 20 years of moderate natural gas prices have also rid it of pockets of excess capacity. Markets tend to drive just-in-time approaches to capacity, building facilities that can pay for themselves through their value serving markets. The occasional disruption does not produce enough value to justify the investment required to prevent it.

**Just-in-time is an approach to efficiently delivering services as close as possible to just the amount needed, when it is needed and where it is needed.**

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

This movement toward just-in-time delivery of natural gas is illustrated by Figure 10—a graph published by the American Gas Association in its recent winter assessment.<sup>32</sup> Figure 10 tells the story of the end of the oversupply situation characteristic of the natural gas industry, starting in the early 1980s as a consequence of the NGPA, known as the “gas bubble.” Gas production and productive capacity are charted together. The difference between the two lines is the excess natural gas production capacity that is available but not used.

Starting in the early 1980s (before the period included in Figure 10) the natural gas industry used this flexibility in wellhead production to help manage demand swings. Production, as long as it remained lower than capacity, moved up and down in response to relatively short-term demands. Around 2000, this flexible response diminished as production neared the ceiling of productive capacity with imports (which tripled between the mid-1980s and now) making up some of the volume.

The natural gas industry’s experience of managing operational flexibility from the early 1980s through the late 1990s was made easier by the oversupply situation. The erratic nature of demand in the natural gas industry did not disappear in the late 1990s. Consequently, some other part of the industry has had to handle demand swings.

Pipeline operations, storage and distribution operations play a greater role now in volume management than when production capacity had surpluses. Price swings affecting some demand may also play a part. Looking back at Figure 1, we see that prices rose higher and for longer after the end of the oversupply situation than they had over the previous 20 years. The end of the “gas bubble” is not the only reason for the prices of 2000-01, but the shift in where supply flexibility must be managed likely contributed.

*The implication of the reduced role of production as a viable source of operational flexibility is the increased demand on existing infrastructure to provide such flexibility.*

## Actions

■ Industry and government can take actions to assure adequate investment in gas supplies, constrained areas and infrastructure needed as a result of reduced operational flexibility.

<sup>32</sup> Energy and Environmental Analysis Inc., “Lower-48 Dry Gas Production vs Dry Gas Productive Capacity,” presented by the American Gas Association to the Federal Energy Regulatory Commission in a briefing titled “Outlook for Natural Gas Market Conditions,” September 6, 2002

## Industry Actions

*Industry should maintain existing infrastructure.*

The extensive facilities required to supply and deliver natural gas to customers make them inherently vulnerable to disruptions. Failure of any part of the system – rigs, pipelines, compression, storage, distribution facilities – can result in failure to deliver to certain customers for some period of time. Consequently, natural gas facilities providers must monitor and maintain their physical plant, inventories of replacement parts and safety procedures carefully

*Industry should cooperate with improving the performance of price discovery mechanisms.* Increased confidence in price discovery mechanisms can increase confidence in price signals, such as increased basis differentials, that provide industry with an indication of the value of investment in new infrastructure such as delivery facilities.

*Industry should work to create viable forward markets for capacity.* Viable forward markets would provide the mechanism for customers, producers and pipelines to invest in new capacity.

*Finally, industry needs to make use of risk management services.* As discussed, tightening supply, pipeline constraints and reduced operational flexibility can all increase short-term price volatility to customers. Industry focus on stability is critical for customer confidence. Use of price-risk management techniques, including fixed prices, and effective investment in infrastructure will be key to customer satisfaction.

## Commission Actions

The Commission has undertaken efforts to improve the reliability and management of volatility in the natural gas industry. They include the following:

- ▶ OMOI will continue to monitor and assess regional markets and potential capacity constraints and resulting price and reliability effects.
- ▶ OMOI believes the Commission should support the development of forward capacity markets to facilitate gas infrastructure investment
- ▶ The Commission will encourage state regulators to make rules that allow timely price signals to reach retail customers and encourage demand-side alternatives, adding important pricing signals and lower-cost demand flexibility to the natural gas industry.

2003 NATURAL GAS MARKET ASSESSMENT

## Issue 5

# CONTINUING POTENTIAL FOR MANIPULATION

**E**vidence indicates that price manipulation has occurred in certain natural gas marketplaces, and may be continuing.

Price manipulation accusations and admissions have had high visibility during this time of stress on energy markets, resulting in dramatic losses in confidence by customers and other participants. To regain lost confidence, natural gas markets must, going forward, develop adequate institutions to manage the potential for manipulation and deter it.

In addition to recent activity by certain market participants, much evidence of manipulation right now is likely the result of a high degree of scrutiny, a natural side effect of building robust market institutions. Nevertheless, it is likely that revelations of improper behavior will continue for some time. The Commission is likely to be at the forefront of much of this revelation.

## The Situation

The fair and effective functioning of energy marketplaces requires robust industry institutions designed to prevent manipulation and promote customer confidence. To date, the natural gas industry has not adequately developed these institutions.

The Commission has investigated specific incidences of aberrant market behavior for some time, and it created OMOI in 2002 to help the Commission monitor existing marketplace institutions. OMOI's charge is to oversee market behavior on an ongoing basis and investigate improper behavior, such as the manipulation of energy markets. Manipulation consists of the violation of regulations and the use of market power and deception to profit from

other market participants.

Since FERC's Enforcement Division moved to OMOI in August 2002, we have increased the number of active natural gas and electric market-related investigations steadily. Manipulation is more likely where market liquidity is low, price discovery is obscure and capacity is constrained, and this manipulation may move prices in either direction. The ongoing reduction in numbers of wholesale market participants and reduced liquidity and transparency at pricing points may increase the potential for manipulation. Having fewer traders may reduce the statistical significance of reporting for less-active trading points, reduce liquidity, increase bid-ask differentials, increase volatility and increase the potential for distorted price reporting.

The Commission conducts investigations of natural gas market participants using the following five broad categories of price manipulation:

**Controlling marketplaces through weak liquidity.** As discussed above, the natural gas market consists of many relatively illiquid marketplaces. In some cases, individual trading companies dominate these marketplaces, giving the companies market power. Certain trading companies appear to have used market power to affect prices. The Commission, through OMOI and other staff investigations, is looking at particular situations where use of market power arising from weak market liquidity appears to have affected prices

2 0 0 3 N A T U R A L G A S M A R K E T A S S E S S M E N T

**Withholding capacity.** Another type of market power arises from control of facilities to or from areas where capacity is tight. In the natural gas business, having capacity generally means having access to transportation, storage or distribution. The Commission investigates cases where it is alleged that companies withheld capacity to the point where a price in a related market was affected.

**Manipulating physical marketplaces to affect prices in associated financial marketplaces.** Companies may be able to use market power to manipulate prices in physical markets in order to affect associated financial markets.

**Communicating market information from pipelines to their marketing affiliates.** The Commission has strict rules regarding communication of information from regulated capacity providers – generally pipelines – to their affiliated marketers. Affiliated marketers could use information about regulated capacity availability to take positions in a marketplace more advantageous than their competitors.

**Providing false data about prices or volumes to index publishers.** As we discussed more thoroughly above in the price discovery section, some companies have admitted lying to the trade press regarding prices. Lying about commodity prices can be a felony. The Commission and others have discovered extensive evidence of lying about prices to trade publications in the past.

This list of categories is not exhaustive, nor does it represent all the potential strategies for manipulating natural gas prices. Effective market oversight will require the ability to identify, investigate and resolve manipulation quickly, and to distinguish manipulation from price movements (up or down) resulting from market forces.

## Actions

Coordinated efforts by industry and government can best prevent market manipulation.

### Industry Actions

Participants in natural gas markets may, at times, believe that their short-term goals can be furthered through market manipulation. In the longer term, manipulation destroys confidence in the industry. In a real sense, the current situation in the natural gas industry is the direct result of certain participants' failure to consider the long-term consequences of their unethical and illegal actions.

*Companies active in natural gas trading must take responsibility to stop manipulation of markets, either by their employees or by others.* These efforts fall into two categories:

- ▶ Establishing and maintaining internal legal and risk management controls, and
- ▶ Reporting suspicious behavior to the appropriate authorities.

OMOI has seen an increasing interest by natural gas traders in both of these approaches. Some companies have taken actions to clean house internally in response to various internal and external investigations. Some companies have reported suspicious behavior to the Commission and other responsible governmental authorities.

Collective industry efforts have included those spearheaded by the CCRO related to appropriate controls and by EPSA related to ethical behavior.

### Commission Actions

*The Commission has made a strategic commitment to vigilant oversight of market manipulation in wholesale natural gas markets. Much of the Commission's efforts in this area, those related to specific investigations, is confidential and cannot be mentioned here. However, certain activities can be reported:*

- ▶ The Commission formed OMOI in early 2002 explicitly to coordinate market monitoring and investigation capabilities.

**C O N T I N U I N G   P O T E N T I A L   F O R   M A N I P U L A T I O N**

---

► The Commission has received energy market briefings developed by OMOI at regular closed meetings since mid-2002. Issues reviewed include price movements, financial conditions, market intelligence, system outages, potential market manipulations and other observed behaviors.

► OMOI is developing a set of gas and electric market metrics and thresholds designed so that when anomalies occur, OMOI investigates to determine if the deviations can be explained by physical market imbalances, by market rule problems or by improper market behavior.

► The Commission is increasing its coordination with other regulatory bodies, including the Commodity Futures Trading Commission, the Securities and Exchange Commission, the Department of Justice, state commissions and others.

► OMOI operates the Commission's toll-free Enforcement Hotline (877-FERC-MOI), which received about 600 calls in 2002. These calls include inquiries, complaints and tips about inappropriate market behavior.

2003 NATURAL GAS MARKET ASSESSMENT

## CONCLUSION

**C**ompetitive forces have created extraordinary benefits for natural gas customers. However, the competitive wholesale natural gas market faces many critical challenges as 2003 gets underway. These challenges include:

- ▶ Deteriorating financial conditions of market participants;
- ▶ Managing credit exposure;
- ▶ Shaken confidence in price discovery methods;
- ▶ Continuing need for efficient investment in infrastructure; and
- ▶ Continuing potential for manipulation.

The healthy functioning – or distress – of natural gas markets can have profound effects on the overall economy because of the gas market's size, pervasiveness and the critical needs it meets.

Operation of a competitive wholesale natural gas market generated significant customer benefits over the past quarter-century. Quick, thoughtful and meaningful

action can address the current challenges and maintain the benefits of a competitive natural gas industry for its customers and the overall economy.

The issues facing the effective competitive functioning of the natural gas market are manageable over time. Both industry participants and regulators should aggressively seek out and promote solutions to assure efficient, cost-effective, fair and valuable natural gas service to all customers in the United States.

Industry actions indicate a significant, responsible interest in dealing with the challenges that face natural gas markets today. As long as that interest remains, it provides a strong positive indication that these issues can be resolved.

The Commission continues to promote fair, efficient markets through a clear focus on its strategic initiatives to:

- ▶ Assure sufficient infrastructure;
- ▶ Create balanced market rules; and
- ▶ Maintain vigilant oversight and enforcement.

This *Natural Gas Market Assessment* has presented how OMOI is overseeing natural gas markets and enforcing the Commission's rules.

SAN FRANCISCO OFFICE  
INVESTIGATION 02-11-040

**ORDER INSTITUTING INVESTIGATION  
PHASE I**

**Summary**

The price of natural gas delivered to the California border was extraordinarily high in 2000 and 2001, particularly during the period between December 2000 and May 2001. The Commission has already filed a complaint at the Federal Energy Regulatory Commission (FERC) and litigated against El Paso Natural Gas Company (El Paso) and its marketing affiliate for their manipulation of natural gas supplies to California, which was a substantial cause of the natural gas price spikes. In this investigation, the Commission will examine if there were additional reasons for these price spikes. We will approach this investigation in two phases. In Phase I we name as Respondents the Sempra Energy Companies, Southern California Gas Company (SoCalGas) and San Diego Gas & Electric Company (SDG&E). Respondents in Phase II are Southwest Gas (SW Gas),

I.02-11-040 ALJ/CFT/hkr

Pacific Gas and Electric Company (PG&E), and Southern California Edison Company (Edison). Phase II will commence at a time to be set forth in a future Commission Ruling. In each Phase, respondents are ordered to present evidence which supports all gas market activity that may have affected gas prices during the period March 2000 through May 2001, and to submit testimony explaining the reasons for the natural gas price spikes during this same period. Other non-jurisdictional entities and especially affiliate trading entities of the utilities are also encouraged to submit evidence and testimony related to the reasons for the natural gas price spikes that occurred during this period.

The focus of Phase I of this proceeding is investigatory and fact-finding. The Commission will investigate the past conduct of the respondents with regard to gas price spikes at the California Border from March 2000 through May 2001. The proceeding is categorized as ratesetting. If the investigation reveals that the conduct of respondents contributed to the gas price spikes at the California border during the named period, it may modify or eliminate the respondent's Gas Cost Incentive Mechanism (GCIM), reduce the amount of the shareholder award for the period involved, or order respondents to issue a refund to ratepayers to offset the higher rates paid. If the investigation reveals that statutory laws, or rules or orders of the Commission were violated, the Commission may enter into an adjudicatory phase of this investigation.

### **Background**

#### **Decision 02-06-023**

On June 6, 2002, the Commission issued Decision (D.) 02-06-023 in the Matter of the Application of Southern California Gas Company Regarding Year Six (1999-2000) under its Experimental GCIM and Related Gas Supply Matters. During the course of that proceeding, some of the parties raised concerns about

I.02-11-040 ALJ/CFT/hkr

causes of the extreme border price spikes of natural gas in 2000 and 2001. The decision approved SoCalGas' application, with modifications, and ordered the Energy Division to prepare an Order Instituting Investigation (OII) into the causes of the extreme border price spikes during the period December 2000 through spring 2001.

During hearings on Application (A.) 00-06-023, the Southern California Generation Coalition (SCGC) argued that the GCIM should be modified to encourage SoCalGas to purchase gas at or below prevailing market prices, rather than relying on hub services and financial trades to reduce overall cost of gas. Edison faulted the GCIM for relying on wholesale physical and financial transactions with noncore customers rather than encouraging the utility to acquire gas at the lowest possible cost on behalf of core customers.<sup>1</sup> Edison's position was that the GCIM, both in its current form and in settlement form, encourages perverse incentives and market manipulation through the utility's monopoly position in its storage services, intrastate transmission, and core procurement. Edison argued that since noncore customers are on the other side of swaps or other ancillary transactions that benefit core customers, consumers ultimately pay for this benefit when electric generators and others pass on the costs to consumers through increased prices. SoCalGas testified in rebuttal that the high price of gas in winter 2000/2001 was caused by factors beyond the control of SoCalGas, in particular, unusually cold weather, reduced supplies of

---

<sup>1</sup> Core customers are defined as those who lack alternatives to natural gas service. Most core customers are residential and small commercial customers. Noncore customers are relatively large and are generally capable of switching from natural gas to an alternative fuel, such as oil.

I.02-11-040 ALJ/CFT/hkr

hydroelectric power, increased electric generation gas load, the rupture and shutdown on an El Paso pipeline, and inefficient use of gas storage by generators. SoCalGas testified that it represents only 3% to 4% of the total volumes on which the benchmark indices are based.

**The California Natural Gas Infrastructure Outlook Report**

In November 2001, the Commission issued its "California Natural Gas Infrastructure Outlook Report."<sup>2</sup> In Chapter 2 of that report, there is a discussion about the "skyrocketing prices experienced in California in 2000 and 2001." The report concludes that the following four factors were responsible for California's gas price spikes: (1) anticompetitive actions by El Paso, the owner of an interstate pipeline, drove up gas prices at the California border; (2) low rainfall limited the supply of hydroelectric generation, resulting in increased demand of gas-fired electric generation; (3) noncore customers did not have sufficient gas in storage; and (4) gas prices were higher, not only in California, but across the country, during that period.

**Demand:** The report attributes price spikes at the southern California border to the high demand for gas by electric generators along with the low precipitation in 2000 and 2001 in California and the Pacific Northwest. The report estimates that demand for natural gas in California increased 22 per cent during the period from 1996 to 2000. Low precipitation in 2000 and 2001 in California and the Pacific Northwest limited the amount of hydroelectric generation available to California. The report also states that when California's restructured electricity market began to collapse in May 2000, gas demand from

I.02-11-040 ALJ/CFT/hkr

gas-fired power plants soared. PG&E and SoCalGas' gas deliveries increased nearly 20% over the previous year, and SDG&E was forced to curtail noncore gas customers in the winter of 2000-2001 because of unusually high electric generation demand.

**Storage:** The report notes the neglect of noncore customers to inject enough gas into storage as another reason for the high price spikes. When demand increased, noncore customers could not rely on stored gas to meet their requirements and had to transport gas across the border, further exacerbating escalating prices.

Although the Natural Gas Infrastructure Report identifies factors both external to California (the El Paso contract, dry hydro conditions in the Pacific Northwest and higher gas prices across North America), and internal to California (dry hydro conditions in California, failure of California noncore customers to store adequate gas, and increased demand of California's electric generators) as reasons for high price spikes at the California border, it did not investigate any gas trading activities of regulated utilities or other entities at the border. We open this proceeding because gas trading activities of utilities under California jurisdiction as one possible cause of the gas price spikes experienced at the southern California border in the winter of 2000/2001 remain unexplored.

**FERC Review of Gas Activity at the California Border**

The San Juan and Permian Basins are natural gas reserves located in New Mexico and Texas. The price of gas from these basins was historically used as a benchmark for the Southern California border price. In March 2000, El Paso Merchant Energy contracted for 1,220 million cubic feet per day (MMcfd) of El Paso pipeline capacity. By the summer of 2000, the price of gas at the border began to reflect a substantial mark-up from these southwest producing basins'

I.02-11-040 ALJ/CFT/hkr

prices. On April 4, 2000, the Commission filed a Complaint with the FERC arguing that a 15-month contract between El Paso (the owner of the pipeline) and El Paso Merchant Energy (an affiliate of El Paso) had the potential for market power and affiliate abuse. On March 28, 2001, the FERC dismissed the affiliate abuse aspects of the complaint, but set for hearing the issue of "whether El Paso Pipeline and/or El Paso Merchant Energy had market power and, if so, exercised it."<sup>3</sup> Shortly after the El Paso Merchant Energy contract expired in May 2001, California border prices again corresponded to San Juan Basin prices. The Commission and others filed requests for rehearing on the affiliate abuse issue and on June 11, 2001, the FERC issued its Order on Rehearing which set for hearing, "the allegations of affiliate abuse and possible violations of the Affiliate Standards raised by the complaint."<sup>4</sup>

On October 9, 2001, in the Initial Decision on the CPUC v. El Paso complaint, the FERC's Chief Administrative Law Judge (Chief Judge) agreed that El Paso violated the FERC affiliate abuse regulations and that El Paso and El Paso Merchant Energy had the ability to exercise market power. This decision, however, ruled that no clear evidence was shown to demonstrate an exercise of market power.<sup>5</sup> The Commission, Edison, and PG&E appealed this finding to the FERC. On December 27, 2001, the FERC subsequently agreed that additional

hearings were warranted. Additional hearings were held in March and April 2002. The FERC Chief Judge issued a new initial decision on September 23, 2002, this time concluding that El Paso Corporation exercised market power when it withheld large amounts of capacity that it could have flowed to its California delivery points. The ruling states that El Paso's actions significantly increased the price of natural gas flowing to California and substantially tightened the supply of natural gas at the California border.<sup>6</sup>

On February 13, 2002, the FERC issued an Order entitled "Order Directing Staff Investigation."<sup>7</sup> In this Order, FERC directed its Staff to "undertake a fact-finding investigation into whether any entity, including Enron Corporation, manipulated short-term prices in electric energy or natural gas markets in the West or otherwise exercised undue influence over wholesale prices in the West, for the period January 1, 2000 forward."<sup>8</sup> On August 13, 2002, FERC Staff published its *Initial Report on Company-Specific Separate Proceedings and Generic Reevaluations; Published Natural Gas Price Data; And Enron Strategies* ("Initial Report").<sup>9</sup> Among other things, the Initial Report states that, "While Staff is continuing to investigate whether there was actual manipulation of spot gas

**Nevada Antitrust Suite**

On November 1, 2002, the Nevada Attorney General filed an antitrust suite through the Nevada Bureau of Consumer Protection, alleging that several interstate gas pipelines and local distribution companies conspired to overcharge Nevada consumers for gas and electricity over the past five years. The suit alleges that the companies including El Paso and Sempra Energy engaged in an elaborate conspiracy to manipulate the supply of natural gas and refrain from competing against each other thereby causing the tremendous natural gas spikes in the Western energy markets. The suit further claims the defendants plotted to exercise market dominance and stifle the construction of competing pipelines serving the southwestern U.S. and northern Mexico beginning in 1996 and lasting through June 2001. The suit alleges that the conspiracy between El Paso and SoCalGas drove up prices in the southern California gas market, which harmed consumers.

**Preliminary Scoping Memo**

The scope of this proceeding shall include all issues raised in this order, but will not be limited to these issues. Any party may suggest related issues for the Commission's consideration.

In D.02-06-023, the Commission ordered the Energy Division to prepare an OII of the cause of border price spikes experienced during the period from December 2000 through spring 2001. We are broadening the specified time period of this investigation back to March 2000 to coincide with the commencement of the El Paso contract with El Paso Merchant Energy.

At a minimum, we are interested in investigating the following questions:

1. Did any of the entities under our regulatory jurisdiction play a role in causing the increase in California border prices between March 2000 and May 2001?

I.02-11-040 ALJ/CFT/hkr

2. Did any of the utilities' affiliates or parent companies play a role in causing the increase in border prices? Did concerns about affiliates or parents' financial position cause utilities to take actions that may have increased gas costs?
3. What were the primary factors that caused the increase in prices? In addition to the increase in gas costs caused by El Paso's actions, what other factors may have caused gas prices to increase to such high levels? Did recently acknowledged inaccurate reporting of gas price information to energy trade publications by energy trading companies have any affect on published index prices?
4. Did the utilities' gas cost incentive mechanisms create perverse incentives to increase or otherwise manipulate natural gas prices at the California border? We shall examine whether SoCalGas' Year 7 and Year 8 operations under the GCIM, enabled them to exercise market power and/or anticompetitive behavior. If so, should these incentive mechanisms be modified or eliminated to prevent such activity?

We now order Phase I of an investigation into the gas transactions of SoCalGas, SDG&E, and Sempra Energy Trading for the period March 2000 through May 2001. We prefer to initially focus on the Sempra Energy Companies to more fully explore the issues raised in SoCalGas' GCIM proceeding, A.00-06-023, as well as other evidence to be obtained in the course of this investigation. Phase II of this Investigation will address the transactions of PG&E, PG&E Energy Trading, SW Gas, Alenco Gas Services Inc., Conwest Exploration, Ltd., Edison, and Edison Mission Energy for the same period. Phase II of this investigation will commence at a time to be set forth in a future Commission Ruling.

I.02-11-040 ALJ/CFT/hkr

We expect cooperation in this investigation from other non-jurisdictional entities, especially from the affiliate trading entities of the utilities.

Discovery in Phase I of this investigation may commence upon issuance of this OII.

This OII is today served on the parties on the service lists of SoCalGas A.00-06-023, and on the service list of SoCalGas' most recent Biennial Cost Allocation Proceeding (BCAP) A.01-09-024, SDG&E BCAP A.01-10-005, PG&E BCAP A.00-04-002, SW Gas General Rate Case (GRC) A.02-02-012, and Edison GRC A.02-05-004.

The rules and procedures implementing many of the reforms contained in Senate Bill (SB 960) are found in Article 2.5 of the Rules of Practice and Procedure (Rules), which are posted on the Commission's website. Pursuant to Rule 4(a) the rules in Article 2.5 shall apply to this proceeding. As per the provisions of SB 960, Phase I of the present investigation is categorized as a Ratesetting proceeding and is expected to require a hearing.

The assigned Commissioner and Administrative Law Judge shall convene a prehearing conference (PHC) within 60 days of this Order to develop a service list for this proceeding and to delineate further issues related to scope and schedule for this proceeding. Notice of the PHC will be provided by a ruling.

Any person who objects to the categorization of this investigation must file an appeal no later than ten days after the date of this OII, pursuant to Rule 6.4(a).

The temporary service list is attached to this order and shall be used for service until a service list for this proceeding is established at the PHC. Persons who want to become a party to this proceeding shall appear at the PHC, or at the formal hearing, and fill out the "Notice of Party/Non-Party Status" form (appearance form).

I.02-11-040 ALJ/CFT/hkr

Those persons who do not want to be parties, and only want notice of the hearings, rulings, proposed decisions, and decisions, may either appear either at the PHC or at the formal hearing and fill out an appearance form, or they may mail a written request to the Process Office requesting that they be added to the service list for information only.

Those persons employed by the State of California who are interested in this proceeding may be added to the "state service" section of the service list by appearing either at the prehearing conference or at the formal hearing and filling out an appearance form, or they may mail a written request to the Process Office requesting that they be added to the state service list. All of the names appearing on the state service list shall be served with all documents that parties may submit or file in connection with this proceeding.

The Process Office shall develop an initial service list based on the appearances at the first PHC. This initial service list shall be posted on the Commission's website, [www.cpuc.ca.gov](http://www.cpuc.ca.gov), as soon as it is practicable.

Any party interested in participating in this investigation who is unfamiliar with the Commission's procedures should contact the Commission's Public Advisor Office in Los Angeles at (213) 649-7055, or in San Francisco at (415) 703 2074.

Consistent with Rule 6(e), we expect this proceeding to be concluded within 18 months.

**Ex Parte Communications**

This proceeding is subject to Rule 7(c) of the Commission's Rules of Practice and Procedure. In addition to placing specific requirements on ex parte communications, Rule 7 (c) also requires parties to report ex parte communications pursuant to Rule 7.1.

I.02-11-040 ALJ/CFT/hkr

**O R D E R**

**IT IS ORDERED that:**

1. An investigation is instituted into the gas market activity of Southern California Gas Company (SoCalGas), San Diego Gas & Electric Company (SDG&E), Sempra Energy Trading, Southwest Gas (SW Gas), Pacific Gas and Electric Company (PG&E), PG&E Energy Trading, Alenco Gas Services, Conwest Exploration, Ltd., Southern California Edison Company (Edison), and Edison Mission Energy which may have affected prices at the California border during the period from March 2000 through May 2001.
2. SoCalGas, SDG&E, PG&E, SW Gas, and Edison are made respondents to this proceeding.
3. The respondents are required to retain all documents which pertain to transactions affecting gas prices at the California border during the period March 2000 through May 2001.
4. We will approach this Investigation in two phases: Phase I will address the activities of the Sempra Energy Companies of SoCalGas, SDG&E, and Sempra Energy Trading. Phase I will commence immediately.
5. Phase II will focus on the transactions of SW Gas, PG&E, PG&E Energy Trading, Alenco Gas Services, Conwest Exploration, Ltd., Edison, and Edison Mission Energy. Phase II of this investigation will commence at a time set forth in a future Ruling of the Commission in this proceeding.
6. Phase II will focus on the transactions of SW Gas, PG&E, PG&E Energy Trading, Alenco Gas Services, Conwest Exploration, Edison, and Edison Mission Energy. Phase II of this investigation will commence at a time set forth in a future Ruling of the Commission in this proceeding.

I.02-11-040 ALJ/CFT/hkr

7. Discovery in Phase I of this proceeding may commence immediately.

8. At a hearing to be scheduled by the Assigned Commissioner and Administrative Law Judge, Phase I respondents shall appear and show cause demonstrating why gas prices at the California border dramatically increased during the period from March 2000 through May 2001.

9. Respondents in Phase I shall file and serve written testimony in accordance with the schedule set forth in the assigned Commissioner Scoping Memo issued after the first PHC. Other parties may file and serve testimony in accordance with the schedule set forth in the Assigned Commissioner's Scoping Memo.

10. The Executive Director shall cause this Order Instituting Investigation to be served on the respondents and on the service lists of SoCalGas Gas Cost Incentive Mechanism Application (A.) 00-06-023, SoCalGas Biennial Cost Allocation Proceeding (BCAP) A.01-09-024, SDG&E BCAP A.01-10-005, PG&E BCAP A.00-04-002, SW GAS General Rate Case (GRC) A.02-02-012, and Edison GRC A.02-05-004.

11. The temporary service list is attached and shall be used for service of all pleadings until a service list for this proceeding is established. An initial service list for this proceeding shall be created by the Process Office and posted on the Commission's website ([www.cpuc.ca.gov](http://www.cpuc.ca.gov)) as soon as it is practicable after the first prehearing conference. Parties may also obtain the service list by contacting the Commission's Process Office at (415) 703 2021.

12. The category of the investigation is determined to be Ratesetting as that term is defined in Rule 5(c) of the Commission's Rules of Practice and Procedure.

1 MR. BILAS: I'd like to present Mr. Stout who  
2 will make a presentation. He also has an affidavit which is  
3 being copied right now, and as soon as it's available, we'll  
4 make copies available to Your Honor and the reporter and the  
5 participants here today.

6 PRESIDING JUDGE: Since you're going to be a  
7 witness, could you raise your right hand?

8 Whereupon,

9 JOHN H. STOUT  
10 was called as a witness herein, and having been first duly  
11 sworn by the Presiding Judge, was examined and testified as  
12 follows:

13 PRESIDING JUDGE: Give your full name and address  
14 to the reporter.

15 MR. STOUT: My name is John H. Stout, 4314 Sao  
16 Paulo Street, Pasadena, Texas.

17 PRESIDING JUDGE: Do you want to sort of pick the  
18 mike up?

19 MR. STOUT: Okay. Can you hear me now?

20 PRESIDING JUDGE: Yes, I can. Can you hear him?  
21 It's important that she hears you.

22 MR. STOUT: I guess in my judgment, we've not  
23 reached a settlement. In fact, we really haven't even come  
24 close in these proceedings. And now the dilemma exists for  
25 Judge Wagner to make recommendations to the Commission, and

1 the Commission will have to make ultimate decisions,  
2 decisions about who, if anyone should refund revenues, how  
3 that allocation of revenues takes place between parties.  
4 But there's another aspect of this case that has really not  
5 received any discussion to speak of, and this once refunds  
6 are established, there is yet another allocation process  
7 that the Commission will have to deal with which takes those  
8 refunds and allocates them to the parties that purchase  
9 power from the ISO and PX.

1                   FERC is likely to need some manner of consistent  
2 methodology in order to evaluate that allocation of refunds  
3 and returns.

4                   They indicated in some of the correspondence that  
5 they would like for the ISO to do some evaluation of that.  
6 They hinted perhaps the June 19th Order has some of the key  
7 elements that they would like to see in that sort of  
8 allocation. And the ISO did come back with a calculated  
9 number.

10                   But I want to point out very clearly for the  
11 record that the calculations that were done by the ISO are  
12 clearly not the June methodology that was advocated by the  
13 Commission.

14                   To the economists that testified yesterday, they  
15 indicated that they thought the ISO had picked the key  
16 elements and one economist I guess testified that it was the  
17 intent of the June Order from FERC that they try to capture.

18                   But to a business person, such as myself, it  
19 doesn't appear that way. It appears instead that they took  
20 the elements from the June Order that tend to inflate the  
21 refund calculation, and those that might tend to deflate it,  
22 they took those out and substituted alternative mechanisms  
23 which further tend to inflate that calculation.

24                   The model that the ISO has used is a secret black  
25 box. We have been requesting information ever since the

1 results of that model was first published several months  
2 ago, information not on our competitors, but at least just  
3 on our results. How did you determine the number for  
4 Reliant and what was the number for Reliant?

5 The data, the model, and the results have never  
6 been given the kind of validation, scrutiny that's necessary  
7 for that sort of calculation to form a basis for a  
8 Commission recommendation.

9 In fact, the only data that we've been allowed to  
10 receive from that model, and it's been I think identified as  
11 going to be released publicly, are some heat rate numbers.

12 When we went back and examined those heat rate  
13 numbers, which were supposed to represent the highest actual  
14 incremental heat rate in the system for each hour between  
15 October and May, what we discovered is that 38 percent of  
16 those hours, we had units operating that had substantially  
17 higher heat rates than what the ISO had indicated were in  
18 fact the highest heat rates in operation at the time.  
19 That's not a very good track record with regard to the  
20 quality of the model.

21 Contrary to the assertions that were made by the  
22 state in their closing comments yesterday that they've been  
23 forthright with answers, the fact is that ever since this  
24 model was first introduced, the ISO, and now the state have  
25 been reluctant to answer and in fact have refused to answer

1 many of the questions that have been asked by reliant.

2 The biggest problem that's inherent in the model  
3 used by the state has to do with gas prices. You've heard  
4 LADWP talk about that this morning. You've heard me talk  
5 about it several times during this conference.

6 And there are three problems with the way gas  
7 prices are evaluated in this model. Any time you  
8 artificially distort the gas prices downward, you're going  
9 to get a large refund calculation. That's what you're  
10 after, so be it.

11 But it distorts the results below the actual cost  
12 of the people who are producing the power. The first issue  
13 is the fact that the use of bid week monthly index price  
14 does match the way most people buy gas for transactions in  
15 the spot markets. As I mentioned before, prudent risk  
16 management requires that if you're going to sell into a  
17 long-term market, you might buy monthly gas or long-term  
18 gas.

19 But if you're selling into a spot market where  
20 you don't know from day to day exactly how much gas you need  
21 or when you're going to need it, it's impossible to arrange  
22 that gas on a month-ahead basis. Instead, you basically  
23 have to get that gas as you're dispatched by the ISO.  
24 Therefore, you're buying it at daily spot prices, not month-  
25 ahead index prices.

602

1                   When we went back and looked to see what sort of  
2 difference that makes, to look at the daily prices for  
3 Southern California, large gas packages, and the bid week  
4 monthly prices during the period from May through October,  
5 it turns out that monthly prices result in a value that's 16  
6 percent less than the average of the actual daily prices.  
7 That introduces basically a 16 percent error in the  
8 calculation.

9                   The second issue with the gas price calculation  
10 is it clearly does not recognize the physical delivery  
11 constraints that exist in the gas infrastructure in  
12 California. You simply cannot get gas from Northern  
13 California delivery points to Southern California.

14                   We tried. Last year was a perfect example of an  
15 opportunity where gas prices in the south were at record  
16 levels, gas prices in the north, in some cases, were less  
17 than half or maybe even a third of what they were in the  
18 south.

19                   We had 200 gas traders on our trading floor,  
20 everyone of them trying to figure a way to get gas from  
21 north to south so we could save money on our gas bill, and  
22 the physical delivery infrastructure simply didn't exist to  
23 get it there.

24                   It's physically impossible for generators in the  
25 south to procure two-thirds of their gas from delivery

TB/aeH

603

1 points in the north from PG&E's City Gate and Malin, and  
2 deliver it to their burner tips in the south. Yet that was  
3 the foundation of the gas price calculation that was used by  
4 the ISO.

5 There has been absolutely no testimony by the ISO  
6 to refute the fact that that gas price calculation is not  
7 going to give the right answer. In fact, the testimony from  
8 their economist said you need to use actual costs, and  
9 actual costs from places that you cannot get gas have no  
10 bearing in trying to evaluate the actual cost in Southern  
11 California.

12 I guess you might as well use gas price indices  
13 from New York and Florida just as well as from Malin and  
14 PG&E.

15 When we went back and looked at the impact that  
16 the use of the blended average price has on the cost of gas  
17 compared to, once again, the Southern California gas price,  
18 we find that from October through May, the Southern  
19 California gas costs are approximately 39 percent higher  
20 than the gas prices found at Malin and PG&E's City Gate.

21 The third and final problem with the gas cost  
22 calculation is it does not include the charges that are  
23 imposed under CPUC regulations for local intra-state gas  
24 transportation. For those of us in Southern California,  
25 that's another 35 to 40 cents per mmBtu.

1                   Now I mentioned earlier to a business person it  
2                   seemed like the ISO or the state had taken the parts of the  
3                   Order that seemed to escalate the refund amount and that  
4                   they'd taken other parts of the order that tended to de-  
5                   escalate it and discount those.

6                   The other two parts that they changed, which have  
7                   a tremendous impact on the calculation of refund have to do  
8                   with ancillary services and how you establish the cap on  
9                   price during non-emergency periods.

10                  The FERC orders that have been issued to date  
11                  clearly indicate how ancillary service prices are capped.  
12                  They're capped at the energy cost.

13                  But that's not what the ISO used in their  
14                  calculation. They went back and took the calculated proxy  
15                  energy price and subtracted from that some sort of heat rate  
16                  times gas price. To this point in time, we have been unable  
17                  to find out what it is they subtracted other than it's a  
18                  heat rate and a gas price.

19                  But we do know that when you subtract something,  
20                  it's going to reduce the number, so we don't know yet how  
21                  they came up with an ancillary service refund. We do know  
22                  that it is not consistent with FERC's June Order.

23                  And finally, and most importantly, the FERC order  
24                  had a very significant attribute of how it established  
25                  prices during non-emergency periods. It said you take the

605

1 price during the preceding emergency period stage one, and  
2 you discount it 85 percent, and that sets a price ceiling  
3 during the other periods of the year.

4 The ISO didn't do that in their methodology.  
5 They used a continuously varying price, one that is based on  
6 their estimated heat rate of the actual units in production,  
7 which I've already pointed out was fatally flawed. And as a  
8 result, it produced price caps in the market substantially  
9 lower than would have been produced with the methodology,  
10 such as used by FERC, using the 85 percent rule.

11 Let's talk a little bit about what the results of  
12 those calculations were. Any time you use biased  
13 calculations, you'll get results that are unjust and  
14 unreasonable.

15 And to explain the results as they compare to  
16 Reliant Energy, let me describe to you something known as  
17 operating margin. I'll use this in my example.

18 Operating margin is what you have left after you  
19 take your revenue and you subtract out the cost of fuel,  
20 your variable O&M and your nox costs associated with  
21 generating power.

22 Our operating margins in year 2000 did not go up  
23 on a per-megawatt-hour basis; they actually went down by 26  
24 percent compared to what we made two years earlier in 1998.  
25 Our revenues went up substantially but the reason for that

ACE-FEDERAL REPORTERS, INC. ...

Nationwide Coverage

202-347-3700

800-336-6646

410-684-2550

7878503-04  
B/ah

606

1 was not because we were trying to extract higher margins  
2 from the market, not because we were trying to gouge the  
3 market; it was because our fuel costs went up by a factor of  
4 sevenfold from what it was in 1998.

5 Between October and May, the transactions that we  
6 sold into the ISO and PX, taking into account the deductions  
7 that I mentioned earlier with regard to calculating  
8 operating margin, results in an operating margin of \$130  
9 million.

10 The ISO has indicated in a document, which we now  
11 understand is a public document, that they sent to Congress  
12 in fact, that they expect refunds from Reliant Energy not  
13 for the period from October through May, but just for  
14 October through February. Their methodology calculates  
15 refunds of \$376 million. Their refund demand is more than  
16 what we have in operating margin.

17 Simply stated, if we were to refund that amount  
18 of money, we could not even recover our fuel costs.

19 The state threatened in its opening statement  
20 yesterday that if we actually go to litigation on this case,  
21 that their litigation position will be cost-of-service based  
22 rates. I guess my conclusion from that would be cost-of-  
23 service rates might be of benefit to us compared to their  
24 current offer.

25 Now let me talk a little bit about what Reliant

ACE-FEDERAL REPORTERS, INC.

Nationwide Coverage

202-347-3700

607

1 has offered in terms of settling this for the public record.

2 MR. KAHN: Excuse me, Your Honor.

3 If Reliant would like to place their settlement  
4 misconduct in the record, we will then feel free to respond  
5 and reveal what's gone on in the last two weeks. I thought  
6 that the rules were that what went on in the last two weeks  
7 in settlement were not to be discussed.

8 If you noted yesterday, in my statement, I didn't  
9 say one word about the settlement conduct of the parties  
10 here. If either Reliant or the Generators would like to  
11 make this public forum a debate about who behaved well and  
12 who didn't behave well in the last two weeks, we welcome the  
13 opportunity, but then we think we should have the first  
14 opportunity.

15 I think that Reliant ought not to do that at this  
16 point. As I understood what we're doing here is we're  
17 discussing methodologies, not debating how the parties  
18 behaved in the last two weeks.

19 PRESIDING JUDGE: Well, I didn't think Mr. Stout  
20 was talking about how parties behaved, and each party can  
21 make their own position public or anything they want to do  
22 with it, but they can't talk about anybody else's position.

23 Now the state has made its position public. Its  
24 made it clear that the governor said the settlement figure  
25 is \$8.9 billion, and that it could be paid for in several

ACE-FEDERAL REPORTERS, INC. --

B/aeH

608

1 kinds of currencies, which was reported in an interview the  
2 governor I had with, I believe, the Mercury.

3 And so if Mr. Stout wants to say what his offer  
4 is, that's fine, but he can't tell what anybody else's offer  
5 is, so the only offer that should be public should be, at  
6 this point in time, the state's since they've made it  
7 public.

8 If Mr. Stout wants to make Reliant's offer  
9 public, that's his business.

10 MR. STOUT: And that is what I wish to do, Your  
11 Honor.

12 You indicated to us that you needed a settlement  
13 on three issues; credit, refunds, and future power  
14 purchases. And I feel that we've addressed all three of  
15 those.

16 In terms of credit, in the affidavit that we  
17 filed this afternoon, we will have a written document which  
18 describes what we feel like are the credit solutions that  
19 are needed in the market.

20 With regard to future power purchases, our two  
21 cent offer is still on the table. It's been on the table  
22 since December of last year.

23 Based on news reports that have been publicly  
24 released regarding the contracts, the long-term contracts  
25 that have been entered into by the Department of Water

ACE-FEDERAL REPORTERS, INC.

7878503-04  
VB/aeh

609

1 Resources, it's been indicated they have an average capacity  
2 component of about four cents per kilowatt hour.

3 That makes the offer we have on the table about  
4 half the cost of the existing DWR contracts. I will  
5 acknowledge I have not gone back in detail and reviewed the  
6 DWR contracts. I'm basing that statistic on what the media  
7 has reported.

8 But that would indicate that the offer that we  
9 have on the table should be an attractive offer for the  
10 state. And we have over 500 megawatts available that  
11 escalates to several thousand megawatts in future years if  
12 they are interested.

13 With regard to the refund, the big issue that we  
14 talked about for most of the conference, I'd like to  
15 describe a little bit about what Reliant has done and what  
16 we have offered.

17 Our calculations basically came from two  
18 different methodologies. The first was to take the FERC  
19 March 9th methodology and make that a 24 by 7 methodology by  
20 using it to calculate a proxy price and during non-emergency  
21 hours, using 85 percent of that proxy price to determine  
22 what the price cap would be in the market.

23 We also evaluated the refund amounts that would  
24 be generated from a calculation that works from the bottom  
25 up, that works from our actual costs. We took our actual

ACE-FEDERAL REPORTERS, INC. ..

Nationwide Coverage

202-347-3700

410-684-2550

7878503-04  
TB/aeH

610

1 fuel costs and variable O&M and nox costs and added to that  
2 a capacity adder similar to what was proposed by Governor  
3 Gray Davis, Governors Locke and Kitzauffer in their letter to  
4 FERC earlier this year.

5 Our calculated capacity adder was based on a  
6 number that was actually about the same as what our capacity  
7 adder was in the year 1998 when power prices were about  
8 three cents a kilowatt hour, and it's actually lower than  
9 what we make in other regions of the company with a  
10 similarly-sized portfolio.

11 Both of those calculations resulted in almost  
12 identical refund amounts. Those refund amounts that we  
13 proposed, and let me qualify this by saying that this was  
14 only in the context of a comprehensive global solution where  
15 we solve all the other issues, such as the litigation  
16 issues, the credit issues, that sort of thing.

17 Those would result in a refund amount of slightly  
18 under \$50 million from Reliant. And you will have attached  
19 to my affidavit this afternoon, the actual settlement  
20 proposal which we presented to the Judge earlier this week.

21 As a result of these calculations, we were  
22 essentially offering to refund, as part of a comprehensive  
23 global settlement, approximately one-third of the operating  
24 margin that we actually achieved over the relevant refund  
25 period October through May for the PX and ISO transactions.

**FORMER EL PASO VP INDICTED FOR REPORTING BOGUS TRADES TO  
MANIPULATE PRICE OF NATURAL GAS MARKET**

Contact: John R. Lewis, Assistant U.S. Attorney  
Phone: 713/567-9732

(HOUSTON) United States Attorney Michael Shelby, a member of the President's Corporate Fraud Task Force, announced today the unsealing of a two count indictment charging **Todd Geiger**, 38, a natural gas trader and former Vice President of El Paso Corporation ("El Paso"), with knowingly causing the transmission of a false trade report used to calculate the "index" price of natural gas. A warrant ordering Geiger's arrest issued on Monday, December 2, 2002 following the return of the indictment by a federal grand jury in Houston. Geiger, who was arrested last night as he arrived at Bush Intercontinental Airport on a flight from Detroit, Michigan, is expected to appear before United States Magistrate Judge Frances Stacy today.

"On July 9th of this year, The President called for a new ethic of personal responsibility in America's business community. Our mission is to expose through investigation and punish through prosecution those whose criminal conduct threatens to erode confidence in the integrity of U. S. markets. Today's indictment is another step toward establishing that new ethic and accomplishing that mission," said Shelby.

The federal investigation prompting the indictment was conducted by United States Postal Inspectors and the Federal Bureau of Investigation, both member agencies of the Corporate Fraud Task Force. Irregularities were discovered during a review of El Paso's natural gas trades required by the Federal Energy Regulatory Commission earlier this year. El Paso is a publicly-traded corporation headquartered in Houston, Texas, and a provider of natural gas services.

The indictment alleges that on November 30, 2001 Geiger, then an El Paso Vice President responsible for trading natural gas through El Paso's "Canada desk", caused the transmission of a report to Inside FERC Gas Market Report ("Inside FERC"), a trade

industry newsletter, that included volume and price data for forty-eight trades of natural gas by El Paso's Merchant Energy Group knowing that none of the forty-eight trades actually occurred.

Inside FERC uses information provided by traders during monthly surveys -- including the price and volume of fixed price natural gas trades during a period of time at the end of each month, called "bid week" -- to calculate index prices. On the first day of each month, Inside FERC publishes the results of their calculations. Natural gas traders make their physical trades at fixed or "indexed" prices. Movement in index prices often affects the size of the profits that traders are able to generate. Electric utilities purchase billions of dollars of natural gas at prices that often are tied to the index priced published in industry publications including "Inside FERC." Consequently, false information reported to Inside FERC and used in the calculation process has the effect of pushing index prices up or down, and potentially costing consumers of natural gas and electricity throughout the country great sums of money.

Geiger is alleged to have fabricated the list of 48 trades and caused El Paso to report the trades to "Inside FERC" for use in calculating a December 2001 index price. Geiger is also alleged to have discussed the fictitious trades with an editor of the "Inside FERC" as if the trades had actually occurred. If convicted, Geiger faces up to 5 years in prison and a fine of \$500,000 on the false reporting count, and up to 5 years in prison and a fine of \$250,000 on the wire fraud count.

An indictment is a formal accusation of criminal conduct, not evidence. The defendant is presumed innocent unless and until convicted through due process of law.

§

CRIMINAL NO.

CRH-02-712

False Reporting; 7 U.S.C. § 13(a)(2)  
Wire Fraud; 18 U.S.C. § 1343

INDICTMENT

THE GRAND JURY CHARGES:

COUNT ONE

(False Reporting -- 7 U.S.C. § 13(a)(2))

A. Introduction.

At all times material to this indictment:

1. Natural gas was a commodity that traveled in interstate commerce through a vast network of pipelines that spanned Canada, the United States and Mexico.

2. El Paso Corporation ("El Paso") was a publicly traded Delaware corporation with its headquarters in Houston, Texas. El Paso described itself as North America's leading provider of natural gas services. El Paso was organized along four separate business units, one of which, the Merchant Energy Group, traded natural gas.

3. Defendant TODD GEIGER was employed by El Paso's Merchant Energy Group in Houston, Texas, as a natural gas trader. GEIGER, an El Paso Vice President, was responsible for trading natural gas through El Paso's "Canada desk".

4. Natural gas traders such as **GEIGER** were in the business of buying and reselling natural gas for a profit. Traders could enter into transactions calling for the physical delivery of natural gas. Such transactions were called "physical" trades. Physical trades occurred at fixed prices or at "index" prices. Movements in index prices often affected the size of the profits that traders such as **GEIGER** were able to generate.

5. Electric utilities often purchased natural gas at prices tied to index prices. In addition, the prices of natural gas futures contracts were often based on index prices.

6. Certain index prices were published by an industry newsletter, *Inside FERC Gas Market Report* ("*Inside FERC*"), on the first day of each month. *Inside FERC* calculated those index prices by using information it received from traders during monthly surveys. That information included the price and volume of fixed price, physical natural gas trades during a period of time at the end of each month called "bid week".

7. Traders who reported false information to *Inside FERC*, if not detected, pushed index prices up and down, and potentially cost consumers of natural gas and electricity throughout the country great sums of money.

B. False Reporting.

On or about November 30, 2001, in the Houston Division of the Southern District of Texas, defendant,

**TODD GEIGER,**

did knowingly deliver and cause to be delivered for transmission through interstate commerce by telephone and other means of communication false and misleading and knowingly inaccurate reports concerning market information that affected and tended to affect the price of natural gas, a

commodity in interstate commerce, that is, defendant GEIGER caused El Paso to send an email from Houston, Texas, to *Inside FERC*, in Washington, D.C., that included volume and price data for forty-eight trades of natural gas by El Paso's Merchant Energy Group when GEIGER knew that none of the forty-eight trades actually occurred.

In violation of Title 7, United States Code, Section 13(a)(2).

**COUNT TWO**  
(Wire Fraud - 18 U.S.C. § 1343)

A. Introduction.

The allegations of Section A of Count One are repeated and realleged as if fully set forth herein.

B. The Scheme to Defraud.

In or about November, 2001, in the Houston Division of the Southern District of Texas, and elsewhere, the defendant,

**TODD GEIGER,**

did knowingly devise and intend to devise a scheme and artifice to defraud and for obtaining money and property by means of material false and fraudulent pretenses, representations and promises.

C. The Manner and Means of the Scheme.

1. It was a part of said scheme that defendant GEIGER would and did fabricate a list of forty-eight fictitious trades of natural gas by El Paso's Merchant Energy Group.

2. It was a further part of said scheme that defendant GEIGER would and did cause El Paso to report the forty-eight fictitious trades to *Inside FERC* for use in calculating a December, 2001, index price.

3. It was a further part of said scheme that defendant GEIGER would and did discuss the forty-eight trades over the telephone with an editor of *Inside FERC*.

D. The Execution of the Scheme.

On or about November 30, 2001, for the purpose of executing the aforementioned scheme to defraud and intending to do so, the defendant did transmit and cause to be transmitted in interstate and foreign commerce writings, signals and sounds, that is, the defendant, in Houston, Texas, spoke over the telephone with an editor of *Inside FERC* in Washington, D.C.

In violation of Title 18, United States Code, Section 1343.

**FORMER DYNEGY SENIOR TRADER INDICTED FOR REPORTING BOGUS TRADES  
TO INSIDE FERC**

Contact: John Braddock or Eric Reed, Assistant U.S. Attorneys  
Phone: 713/567-9728 713/567-9725

(HOUSTON) United States Attorney Michael Shelby, a member of the President's Corporate Fraud Task Force, announced today the unsealing of a seven- count indictment charging **Michelle Marie Valencia**, 32, a former senior natural gas trader with Dynegy Marketing and Trade, with three counts of knowingly causing the transmission of false trade reports used to calculate the "index" price of natural gas and four counts of wire fraud. Dynegy Marketing and Trade is a general partnership indirectly owned by Dynegy, Inc., which conducts its trade operations at Dynegy, Inc.'s headquarters in Houston, Texas. A warrant ordering Valencia's arrest issued on Wednesday, January 22, 2003, following the return of the indictment by a federal grand jury in Houston.

Valencia, who was arrested this morning at her home on Cedarbreak Drive in Houston by Special Agents of the Federal Bureau of Investigation, is expected to appear today before United States Magistrate Judge Calvin Botley.

"This indictment cuts to the heart of the American system of business. Investors have a right to know the truth about market conditions. We will hold accountable anyone who intentionally deceives the investing public," said Shelby.

The indictment alleges that on three separate occasions in November 2000, January 2001 and February 2001, Valencia, responsible for trading natural gas through Dynegy's "West desk," caused the transmission of a report which include volume and price data for natural gas trades by Dynegy to Inside FERC Gas Market Report ("Inside FERC") knowing that the trades had not actually occurred.

Inside FERC is a trade industry newsletter which uses information voluntarily provided by traders during monthly surveys – including the price and volume of fixed price natural gas

trades during a period of time at the end of each month, called "bid week" – to calculate index prices. On or about the first day of each month, Inside FERC publishes the results of their calculations. Natural gas traders make their physical trades at fixed or "indexed" prices. Movement in index prices often affects the size of the profits that traders are able to generate. Electric utilities often purchase natural gas at prices tied to the index price published in industry publications including Inside FERC. Consequently, false information reported to Inside FERC and used in the calculation process has the effect of pushing index prices up or down, and potentially costing consumers of natural gas and electricity throughout the country great sums of money.

Valencia is alleged to have fabricated a total of 43 natural gas Dynegy Market and Trade trades reported to Inside FERC for use in calculating index prices for the month following the reports submission, that is, for December 2000, February 2001 and March 2001. Valencia is accused of sending via email and causing Dynegy to send a report on November 30, 2000 to Inside FERC which included three fictitious trades. Another email from Valencia to Inside FERC on January 31, 2001, is alleged to have reported thirty-three (33) fictitious trades. A third email from Valencia to Inside FERC on February 28, 2001 is alleged to have reported seven (7) more fictitious trades. Each alleged report of false market information affecting or tending to affect the price of natural gas subjects Valencia, if convicted, to a maximum 5 years in prison and a fine of \$500,000.

The transmission via email of the three fictitious reports by Valencia and a discussion via telephone between Valencia and an editor of Inside FERC of these fictitious trades are also alleged as separate counts of wire fraud. In all four instances, Valencia is alleged to have transmitted the reports or conducted a telephone conversation in furtherance of her scheme to affect the price of natural gas. If convicted of wire fraud, Valencia faces a maximum punishment of 5 years in prison and a fine of \$250,000.

The indictment is a result of a Corporate Fraud Task Force investigation conducted by the Federal Bureau of Investigation and the Division of Enforcement, United States Commodity Futures Trading Commission and is being prosecuted by Assistant United States Attorneys John Braddock and Eric Reed.

An indictment is a formal accusation of criminal conduct, not evidence. The defendant is presumed innocent unless and until convicted through due process of law.

False Reporting; 7 U.S.C. § 13(a)(2)  
Wire Fraud; 18 U.S.C. § 1343

INDICTMENT

THE GRAND JURY CHARGES:

COUNT ONE

(False Reporting -- 7 U.S.C. § 13(a)(2))

A. Introduction.

At all times material to this indictment:

1. Natural gas was a commodity that traveled in interstate commerce through a vast network of pipelines that spanned Canada, the United States and Mexico.
2. Dynegy, Inc. ("Dynegy") was a publicly traded Illinois corporation with its headquarters at 1000 Louisiana Street in Houston, Texas. Dynegy Marketing and Trade was a natural gas marketer and maintained a large natural gas trading operation on a single floor that traded natural gas from its offices also at 1000 Louisiana Street in Houston, Texas. Dynegy Marketing and Trade was a Colorado general partnership, the partners of which were DMT Holdings, L.P. and Dynegy GP, Inc., both of which are indirectly owned by Dynegy.
3. Defendant MICHELLE M. VALENCIA was employed by Dynegy Marketing

and Trade in Houston, Texas, as a natural gas trader on Dynegy's "West desk".

4. Natural gas traders such as VALENCIA were in the business of buying and selling natural gas for a profit. Traders could enter into transactions calling for the physical delivery of natural gas. Such transactions were called "physical" trades. Physical trades occurred at fixed prices or at "index" prices. Movements in index prices often affected the size of the profits that traders such as VALENCIA were able to generate.

5. Electric utilities often purchased natural gas at prices tied to index prices. In addition, the prices of natural gas contracts were often based on index prices.

6. Certain index prices were published by an industry newsletter, *Inside FERC Gas Market Report* ("*Inside FERC*"), on the first day of each month. *Inside FERC* calculated those index prices by using information it received from traders during monthly surveys. That information included the price and volume of fixed price, physical natural gas trades during a period of time at the end of each month called "bid week".

7. Traders who reported false information to *Inside FERC* tended to affect the price of natural gas by pushing *Inside FERC*'s index prices up or down which potentially cost consumers of electricity and natural gas throughout the country great sums of money.

B. False Reporting.

On or about November 30, 2000, in the Houston Division of the Southern District of Texas,

**MICHELLE M. VALENCIA**

defendant herein, did knowingly deliver and cause to be delivered for transmission through interstate commerce by telephone and other means of communication false and misleading and knowingly

inaccurate reports concerning market information that affected and tended to affect the price of natural gas, a commodity in interstate commerce, that is, defendant VALENCIA sent and caused Dynegy Marketing and Trade to send an email from Houston, Texas, to *Inside FERC*, in Washington, D.C., that included volume and price data for three trades of natural gas by Dynegy Marketing and Trade when VALENCIA knew that none of these reported three trades actually occurred.

In violation of Title 7, United States Code, Section 13(a)(2).

**COUNT TWO**  
(False Reporting - 7 U.S.C. § 13(a)(2))

A. Introduction.

The allegations of Section A of Count One are repeated and realleged as if fully set forth herein.

B. False Reporting.

On or about January 31, 2001, in the Houston Division of the Southern District of Texas,

**MICHELLE M. VALENCIA**

defendant herein, did knowingly deliver and cause to be delivered for transmission through interstate commerce by telephone and other means of communication false and misleading and knowingly inaccurate reports concerning market information that affected and tended to affect the price of natural gas, a commodity in interstate commerce, that is, defendant VALENCIA sent and caused Dynegy Marketing and Trade to send an email from Houston, Texas, to *Inside FERC*, in Washington, D.C., that included volume and price data for thirty-three trades of natural gas by Dynegy Marketing and Trade when VALENCIA knew that none of these reported thirty-three trades

actually occurred.

In violation of Title 7, United States Code, Section 13(a)(2).

**COUNT THREE**

(False Reporting -- 7 U.S.C. § 13(a)(2))

A. Introduction.

The allegations of Section A of Count One are repeated and realleged as if fully set forth herein.

B. False Reporting.

On or about February 28, 2001, in the Houston Division of the Southern District of Texas,

**MICHELLE M. VALENCIA**

defendant herein, did knowingly deliver and cause to be delivered for transmission through interstate commerce by telephone and other means of communication false and misleading and knowingly inaccurate reports concerning market information that affected and tended to affect the price of natural gas, a commodity in interstate commerce, that is, defendant VALENCIA sent and caused Dynegy Marketing and Trade to send an email from Houston, Texas, to *Inside FERC*, in Washington, D.C., that included volume and price data for seven trades of natural gas by Dynegy Marketing and Trade when VALENCIA knew that none of these seven reported trades actually occurred.

In violation of Title 7, United States Code, Section 13(a)(2).

**COUNT FOUR**  
(Wire Fraud - 18 U.S.C. § 1343)

A. Introduction.

The allegations of Section A of Count One are repeated and realleged as if fully set forth herein.

B. The Scheme to Defraud.

From on or about November 30, 2000 through on or about February 28, 2001, in the Houston Division of the Southern District of Texas, and elsewhere,

**MICHELLE M. VALENCIA**

defendant herein, aided and abetted by others known and unknown to the grand jury, did knowingly devise and intend to devise a scheme and artifice to defraud and for obtaining money and property by means of material false and fraudulent pretenses, representations and promises.

C. The Manner and Means of the Scheme.

1. It was a part of said scheme that defendant VALENCIA would and did fabricate a list of fictitious gas trades of natural gas by Dynegy Marketing and Trade.

2. It was a further part of said scheme that defendant VALENCIA would and did report and cause Dynegy Marketing and Trade to report fictitious gas trades to *Inside FERC* for use in calculating an index price.

3. It was a further part of said scheme that defendant VALENCIA would and did discuss fictitious gas trades over the telephone with an editor of *Inside FERC*.

D. The Execution of the Scheme.

On or about November 30, 2000, for the purpose of executing the aforementioned scheme to defraud and intending to do so, the defendant did transmit and cause to be transmitted in

interstate and foreign commerce writings, signals and sounds, that is, the defendant, in Houston, Texas, sent and caused to be sent an e-mail to *Inside FERC* in Washington, D.C. which reported fictitious gas trades by Dynegy Marketing and Trade.

In violation of Title 18, United States Code, Sections 1343 and 2.

**COUNT FIVE**  
(Wire Fraud - 18 U.S.C. § 1343)

A. Introduction.

The allegations of Section A of Count One and Sections B and C of Count Four are repeated and realleged as if fully set forth herein.

B. The Execution of the Scheme.

On or about January 31, 2001, for the purpose of executing the aforementioned scheme to defraud and intending to do so, the defendant, MICHELLE M. VALENCIA, did transmit and cause to be transmitted in interstate and foreign commerce writings, signals and sounds, that is, the defendant, in Houston, Texas, sent and caused to be sent an e-mail to *Inside FERC* in Washington, D.C. which reported fictitious gas trades by Dynegy Marketing and Trade.

In violation of Title 18, United States Code, Sections 1343 and 2.

**COUNT SIX**  
(Wire Fraud - 18 U.S.C. § 1343)

A. Introduction.

The allegations of Section A of Count One and Sections B and C of Count Four are repeated and realleged as if fully set forth herein.

B. The Execution of the Scheme.

On or about February 28, 2001, for the purpose of executing the aforementioned scheme to defraud and intending to do so, the defendant, MICHELLE M. VALENCIA, did transmit and cause to be transmitted in interstate and foreign commerce writings, signals and sounds, that is, the defendant, in Houston, Texas, sent and caused to be sent an e-mail to *Inside FERC* in Washington, D.C. which reported fictitious gas trades by Dynegy Marketing and Trade.

In violation of Title 18, United States Code, Sections 1343 and 2.

**COUNT SEVEN**  
(Wire Fraud - 18 U.S.C. § 1343)

A. Introduction.

The allegations of Section A of Count One and Sections B and C of Count Four are repeated and realleged as if fully set forth herein.

B. The Execution of the Scheme.

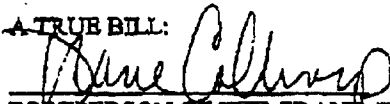

On or about February 28, 2001, for the purpose of executing the aforementioned scheme to defraud and intending to do so, the defendant, MICHELLE M. VALENCIA, did transmit and cause to be transmitted in interstate and foreign commerce writings, signals and sounds,

that is, the defendant, in Houston, Texas, spoke over the telephone with an editor of *Inside FERC* in Washington, D.C.

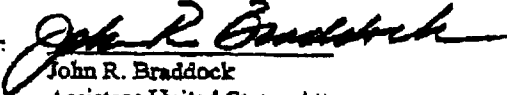

In violation of Title 18, United States Code, Sections 1343 and 2.

A TRUE BILL:

  
FOREPERSON OF THE GRAND JURY

MICHAEL T. SHELBY  
UNITED STATES ATTORNEY

By:

  
John R. Braddock  
Assistant United States Attorney

  
Eric Reed  
Assistant United States Attorney

UNITED STATES OF AMERICA  
Before the  
COMMODITY FUTURES TRADING COMMISSION

RECEIVED

CFTC Docket No.: 03-03

Dynegy Marketing & Trade and  
West Coast Power LLC

**ORDER INSTITUTING  
PROCEEDINGS PURSUANT TO  
SECTIONS 6(e) AND 6(d) OF THE  
COMMODITY EXCHANGE ACT,  
MAKING FINDINGS AND IMPOSING  
REMEDIAL SANCTIONS**

Respondents.

I.

The Commodity Futures Trading Commission ("Commission") has reason to believe that Dynegy Marketing & Trade ("Dynegy Marketing & Trade") and West Coast Power LLC ("West Coast Power") have violated Sections 6(c), 6(d), and 9(a)(2) of the Commodity Exchange Act, as amended (the "Act"), 7 U.S.C. §§ 9, 13b, 13(a)(2) and 15 (2000). Further, the Commission has reason to believe that Dynegy Marketing & Trade has violated Commission Regulations 1.31, 1.35 and 1.40, 17 C.F.R. §§ 1.31, 1.35 and 1.40 (2002). Therefore, the Commission deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted to determine whether Dynegy Marketing & Trade and West Coast Power (collectively, "Respondents") engaged in the violations set forth herein, and to determine whether any order should be issued imposing remedial sanctions.

II.

In anticipation of the institution of an administrative proceeding, the Respondents have submitted an Offer of Settlement (the "Offer"), which the Commission has determined to accept. Without admitting or denying the findings of fact herein, the Respondents consent to the entry of this Order in full and final settlement of any alleged violations of the above referenced laws or regulations and acknowledge service of this Order Instituting Proceedings Pursuant to Sections 6(c) and 6(d) of the Commodity Exchange Act, Making Findings and Imposing Remedial Sanctions ("Order"). Respondents consent to the use by the Commission of the findings herein in the proceeding brought by the Commission and in any other proceeding brought by the Commission or to which the Commission is a party.<sup>1</sup>

<sup>1</sup> Respondents do not consent to the use of their Offer or the findings in this Order as the sole basis for any other proceeding brought by the Commission, other than a proceeding brought to enforce the terms of this Order. Respondents do not consent to the use of the Offer or the findings in this Order by any other person or entity in this or any other proceeding. The findings made in this Order are not binding on any other person or entity, including, but not limited to, any person or entity named as a defendant or respondent in any other proceeding.

### III.

The Commission finds the following:

#### A. SUMMARY

From at least January 2000 through June 2002 (the "Relevant Period"), Respondents reported false natural gas trading information, including price and volume information, to certain reporting firms. Price and volume information is used by the reporting firms in calculating published surveys or indexes ("indexes") of natural gas prices for various hubs throughout the United States. Dynegy Marketing & Trade knowingly submitted the false information to the reporting firms in an attempt to skew those indexes to Dynegy Marketing & Trade's financial benefit. Natural gas futures traders refer to the published indexes for price discovery and for assessing price risks.

In an effort to ensure that its reported information would be used by the reporting firms, Dynegy Marketing & Trade caused Respondent West Coast Power to submit information misrepresenting that West Coast Power was a counterparty to the fictitious trades. In addition, Dynegy Marketing & Trade did not maintain required records concerning the information which it provided to the reporting firms or the true source of the information relayed to those firms as required by Commission Regulations. As a result of their actions, Respondents violated the Act.

Dynegy Marketing & Trade has cooperated in the Commission's investigation of this matter, including, among other things, by conducting an independent internal investigation and by providing the results of that investigation to Commission staff. The Commission has taken that cooperation into consideration in its decision to accept Respondents' Offer.

#### B. RESPONDENTS

Dynegy Marketing & Trade is a Colorado general partnership, the partners of which are DMT Holdings, L.P. and Dynegy GP Inc. Dynegy Marketing & Trade's headquarters are located at 1000 Louisiana Street, Suite 5800, Houston, Texas 77002. Dynegy Marketing & Trade was one of the largest natural gas marketers in the United States and in 2001, Dynegy Marketing & Trade's natural gas sales averaged 8.2 billion cubic feet (Bcf) per day. Dynegy Marketing & Trade maintained a large natural gas trading operation located on a single floor in its Houston offices that traded natural gas, including futures contracts on the New York Mercantile Exchange ("NYMEX"). Dynegy Marketing & Trade is a non-clearing member of the NYMEX. Dynegy Marketing & Trade has never been registered with the Commission in any capacity.

West Coast Power LLC, is a joint venture that was equally owned by an affiliate of Dynegy Marketing & Trade and another energy company. As part of the joint venture, Dynegy Marketing & Trade, among other things, handled all the administrative services and all commodity related concerns. To accomplish these services, Dynegy Marketing & Trade utilized

its own personnel who billed their time to West Coast Power, which itself did not have any employees.

### C. FACTS

#### 1. Gas Market Participants' Use of Information from Reporting Firms

During the Relevant Period, reporting firms compiled and published indexes of natural gas prices for natural gas hubs throughout the United States. The indexes were calculated based upon trading information, including volume and price information, collected by the reporting firms from market participants. Natural gas futures traders refer to the prices published by the reporting firms for price discovery and for assessing price risks. For instance, an increase in prices at a natural gas trading hub signals enhanced demand, and futures traders take account of both price movements and apparent demand when conducting their futures trading.

#### 2. Respondents Report False Market Information

From at least January 2000 through June 2002, Respondents provided false reports to the reporting firms and failed to keep copies of required reports. The false reports included altering price and volume of actual trades and reporting nonexistent trades using the phones, faxes, and the Internet. Respondents continued to provide the false trade data because they believed that it benefited their trading positions or derivatives contracts.

Dynegy Marketing & Trade enlisted West Coast Power to give an appearance of propriety to the false data. During the relevant period for example, as relayed in a Dynegy Marketing & Trade e-mail, a Dynegy Marketing & Trade employee established the following procedure:

Enron owns the index. Unless we start increasing our volumes we are going to continue to take pain on the cash index. I will get you the contact for [the reporting firm]. I would suggest representing yourself as [W]est [C]oast [LLC]  
.... We can show offsetting transactions on our activity.

Respondents' dual submission of the false information to the reporting firms was designed to elude detection from the reporting firms by showing trades with an actual counterparty.

### D. LEGAL DISCUSSION

#### 1. By Reporting False Market Information, Respondents Violated Section 9(a)(2) of the Act

Section 9(a)(2) of the Act makes it a violation for any person "knowingly to deliver or cause to be delivered for transmission through the mails or interstate commerce by telegraph, telephone, wireless, or other means of communication false or misleading or knowingly

inaccurate reports concerning crop or market information or conditions that affect or tend to affect the price of any commodity in interstate commerce[.]”<sup>2</sup> See, e.g., *United Egg Producers v. Bauer Int’l Corp.*, 311 F. Supp. 1375, 1383 (S.D.N.Y. 1970) (concluding that false press releases regarding egg importation “tended to affect the price of eggs in interstate commerce”); *In re Soybean Futures Litig.*, 892 F. Supp. 1025, 1046 (N.D. Ill. 1995) (concluding that false reports can influence prices and constitute part of a manipulation claim).

Respondents violated Section 9(a)(2) of the Act when they knowingly delivered false price and volume information, including fictitious trades, to the reporting firms. As discussed above, price and volume information affect or tend to affect the market price of natural gas, including futures prices as traded on the NYMEX. As such, Respondents violated Section 9(a)(2) of the Act.

**2. By Attempting to Manipulate Prices, Respondents Violated Sections 6(c), 6(d) and 9(a)(2) of the Act**

Sections 6(c) and 6(d) of the Act together authorize the Commission to serve a complaint and provide for the imposition of, among other things, civil monetary penalties and cease and desist orders if the Commission “has reason to believe that any person ... has manipulated or attempted to manipulate the market price of any commodity, in interstate commerce, or for future delivery on or subject to the rules of any registered entity ... or otherwise is violating or has violated any of the provisions of [the] Act.” Section 9(a)(2) provides that it is unlawful for “[a]ny person to manipulate or attempt to manipulate the price of any commodity in interstate commerce, or for future delivery on or subject to the rules of any registered entity, or to corner or attempt to corner any such commodity.”

The following elements generally are required to show an attempted manipulation: (1) an intent to affect the market price; and (2) some overt act in furtherance of that intent. See *In re Abrams*, [1994-1996 Transfer Binder] Comm. Fut. L. Rep. (CCH) ¶ 26,479 at 43,136 (CFTC July 31, 1995). See also *In re Hohenberg Bros. Co.*, [1975-1977 Transfer Binder] Comm. Fut. L. Rep. (CCH) ¶ 20,271 at 21,477 (CFTC Feb. 18, 1977). To prove the intent element of manipulation or attempted manipulation, it must be shown that Dynegy Marketing & Trade “acted (or failed to act) with the purpose or conscious object of causing or effecting a price or price trend in the market that did not reflect the legitimate forces of supply and demand.” *In re Indiana Farm Bureau Cooperative Association*, [1982-1984 Transfer Binder] Comm. Fut. L. Rep. (CCH) ¶ 21,796 at 27,281 (CFTC Dec. 17, 1982). “[I]ntent is the essence of manipulation.” *Id.* at 27,282.

Respondents specifically intended to report false or misleading or knowingly inaccurate market information concerning, among other things, trade prices and volumes, to manipulate the

<sup>2</sup> Under Section 2(a)(1)(B) of the Act and Section 1.2 of the Commission Regulations, the act, omission, or failure of any official, agent, or other person acting for any individual, association, partnership, corporation, or trust within the scope of his employment or office shall be deemed the act, omission, or failure of such individual, association, partnership, corporation, or trust. “[I]t does not matter if the principal participated in or even knew about the agent’s acts; he is strictly liable for them.” *Stoller and Co. v. CFTC*, 855 F.2d 1288, 1292 (7th Cir. 1988) (citing *Cange v. Stoller*, 826 F.2d 581, 589 (7th Cir. 1987); *Rosenthal & Co. v. CFTC*, 802 F.2d 963, 966-67 (7th Cir. 1986)).

price of natural gas in interstate commerce. Respondents' provision of the false reports and their collusion, which was designed to thwart the reporting firms' detection of the false information, constitutes overt acts in furtherance of the attempted manipulation. By so doing, Respondents' conduct constitutes an attempted manipulation under Section 9(a)(2) of the Act, which, if successful, could have affected prices of NYMEX natural gas futures contracts.

**3. Dynegy Marketing & Trade's Failure to Retain Trading Records Violated Commission Regulations 1.31, 1.35 and 1.40**

Dynegy Marketing & Trade, a non-clearing NYMEX member, failed to keep records required of members of a contract market, including records of what Dynegy Marketing & Trade relayed to the reporting firms. Together, Commission Regulations 1.31, 1.35 and 1.40 required Dynegy Marketing & Trade to maintain and to produce upon request to the Commission certain records. Commission Regulations 1.31 and 1.35 required Dynegy Marketing & Trade to maintain and to produce "full, complete, and systematic records, together with all pertinent data and memoranda, of all transactions relating to its business of dealing in commodity futures, commodity options, and cash commodities." In addition, Regulation 1.40 further requires that: "[E]ach member of a contract market shall, upon request, furnish or cause to be furnished to the Commission a true copy of any letter, circular, telegram, or report published or given general circulation by such ... member which concerns crop or market information or conditions that affect or tend to affect the price of any commodity, and the true source of or authority for the information contained therein."

By failing to keep the required records, including records of what Dynegy Marketing & Trade relayed to the reporting firms, Dynegy Marketing & Trade violated Commission Regulations 1.31, 1.35 and 1.40. As discussed above, price and volume information affect or tend to affect the market price of natural gas, including futures prices as traded on the NYMEX.

**IV.**

**FINDINGS OF VIOLATIONS**

Based on the foregoing, the Commission finds that Respondents violated Sections 6(c), 6(d), and 9(a)(2) of the Act, 7 U.S.C. §§ 9, 13b, 13(a)(2) and 15 (2000), and that Dynegy Marketing & Trade violated Commission Regulations 1.31, 1.35 and 1.40, 17 C.F.R. §§ 1.31, 1.35 and 1.40 (2002).

**V.**

**OFFER OF SETTLEMENT**

Respondents have submitted an Offer of Settlement in which, without admitting or denying the allegations or the findings herein, it: acknowledges service of the Order; admits jurisdiction of the Commission with respect to the matters set forth in this Order and for any action or proceeding brought or authorized by the Commission based upon violations or for

enforcement of the Order; waives service and filing of a complaint and notice of hearing, a hearing, all post-hearing procedures, judicial review by any court, any objection to the staff's participation in the Commission's consideration of the Offer, any claim of double jeopardy based on the institution of this proceeding or the entry of any order imposing a civil monetary penalty or other relief, and all claims which it may possess under the Equal Access to Justice Act, 5 U.S.C. § 504 (1994) and 28 U.S.C. § 2412 (1996), as amended by Pub. L. No. 104-21, §§ 231-32, 110 Stat. 847, and Part 148 of the Commission's Regulations, 17 C.F.R. §§ 148.1 *et seq.* (2002), relating to, or arising from, this action; stipulates that the record basis on which this Order is entered consists solely of this Order, including the findings in this Order; and consents to the Commission's issuance of this Order. Pursuant to the Offer of Settlement herein, Dynege Marketing & Trade and West Coast Power agree to entry of an Order, in which the Commission makes findings, including findings that Dynege Marketing & Trade and West Coast Power violated Sections 6(c), 6(d), and 9(a)(2) of the Act and that Dynege Marketing & Trade has violated Commission Regulations 1.31, 1.35 and 1.40 and orders that Respondents cease and desist from violating the provisions of the Act and Commission Regulations they have been found to have violated, and agree to pay a civil monetary penalty of five million dollars (\$5,000,000) within five (5) business days of the entry of this Order, and that they comply with their undertakings as set forth in their Offer and this Order.

VI.

ORDER

Accordingly, IT IS HEREBY ORDERED THAT:

1. Dynege Marketing & Trade and West Coast Power shall cease and desist from violating Sections 6(c), 6(d), and 9(a)(2) of the Act and Dynege Marketing & Trade shall cease and desist from violating Commission Regulations 1.31, 1.35 and 1.40;

2. Respondents, jointly and severally, shall pay a civil monetary penalty in the amount of five million dollars (\$5,000,000) within 5 (five) business days of the date of the entry of this Order, and make such payment by electronic funds transfer to the account of the Commission at the United States Treasury or by certified check or bank cashier's check made payable to the Commodity Futures Trading Commission and addressed to Dennese Posey, or her successor, Division of Enforcement, Commodity Futures Trading Commission, 1155 21st Street, N.W., Washington, D.C. 20581, under cover of a letter that identifies the Respondents and the name and docket number of this proceeding. Copies of the cover letter and the form of payment shall be simultaneously transmitted to Gregory G. Mocek, Director, Division of Enforcement, Commodity Futures Trading Commission, 1155 21st Street, N.W., Washington, D.C. 20581, and to Stephen J. Obie, Regional Counsel, Division of Enforcement, Commodity Futures Trading Commission, 140 Broadway, New York, New York 10005. If payment is not made in accordance with the requirements of this paragraph, the Order shall be vacated and the proceedings reinstated;

3. Respondents shall comply with the following undertakings:

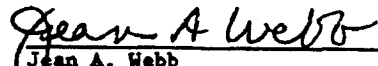

**A. COOPERATION WITH THE COMMISSION**

Respondents shall continue to cooperate fully and expeditiously with the Commission, and its staff, including the Division of Enforcement, in this proceeding and any investigation, civil litigation, or administrative matter related to the subject matter of this proceeding. Respondents agree that this undertaking includes the Respondents in this proceeding and any subsidiaries or affiliates within their control. As part of such cooperation, Respondents agree to comply fully, promptly, and truthfully to any inquiries or requests for information including but not limited to (1) requests for authentication of documents; (2) requests for any documents within Respondents' possession, custody, or control, including inspection and copying of documents; (3) requests for agents and employees of Respondents to testify completely and truthfully to the Division; (4) requests to produce any current (as of the time of the request) officer, director, or employee of Respondents, regardless of the employee's location, for interviews, depositions, or testimony, and to provide testimony or assistance at any trial related to the subject matter of this proceeding; and (5) requests for assistance in locating and contacting any prior (as of the time of the request) officer, director, or employee of Respondents. Respondents also agree that they will not undertake any act which would limit their ability to fully cooperate with the Commission. Respondents designate Kenneth M. Rosenzweig, Esq., of the Mayer Brown Rowe & Maw law firm to receive all requests for information pursuant to this undertaking. Should Respondents seek to change the designated person to receive such requests, notice shall be given to the Division of such intention 14 days before it occurs. Any person designated to receive such request shall be located in the United States.

**B. PUBLIC STATEMENTS**

By neither admitting nor denying the findings of fact, Respondents agree that neither they nor any of Respondents' agents or employees under their authority and control shall take any action or make any public statement denying, directly or indirectly, any findings or conclusions in the Order or creating, or tending to create, the impression that the Order is without factual or legal basis; provided, however, that nothing in this provision shall affect Respondents' (i) testimonial obligations; or (ii) right to take factual or legal positions in other proceedings to which the Commission is not a party. Respondents will undertake all steps necessary to assure that all of their agents, and employees under their authority and control understand and comply with this agreement.

By the Commission.

**Full Text:**

*(Copyright The Times Mirror Company; Los Angeles Times 2003. Allrights reserved.)*

A former top energy trader for Dynegy Inc. was arrested Monday on charges that she reported fictitious natural gas transactions for California and other Western hubs to an industry publication.

The indictment of Michelle Marie Valencia, 32, is the second in a widening investigation into whether energy companies cheated investors and energy ratepayers.

Several energy firms, including Dynegy, have revealed that employees lied to trade publications that assemble indexes of natural gas and electricity prices, which were used by regulators to help set electricity prices during California's electricity crisis and its aftermath.

Valencia, who ran Dynegy's gas-trading desk for the Western U.S., pleaded not guilty Monday after being indicted by a Houston grand jury on charges of giving false data on 43 trades to the Inside FERC newsletter. FERC is an acronym for the Federal Energy Regulatory Commission, the agency that regulates the wholesale power industry.

Valencia reported "fabricated trades from natural gas pipelines that were, in the majority of the cases, in California," said Michael Shelby, U.S. attorney in Houston. "We will hold accountable anyone who intentionally deceives the investing public."

Valencia was charged with three counts of knowingly making false price reports and four counts of wire fraud from November 2000 to March 2001. If convicted on all charges, she could face up to 35 years in prison and fines of as much as \$2.5 million.

Federal prosecutors, along with investigators from the U.S. Commodity Futures Trading Commission and the Justice Department, have been looking into allegations of false price reports since the middle of last year. Their efforts are part of a broader inquiry stemming from the California energy crisis in late 2000 and early 2001 and the collapse of Enron Corp., once the largest energy trader.

Shelby's office in early December charged a former El Paso Corp. trader, Todd Geiger, with providing to

a trade publication information about 48 trades that never occurred.

Houston-based Dynegy agreed in December to pay \$5 million to settle charges by the Commodity Futures Trading Commission that its traders provided false prices.

Other companies that have acknowledged providing false reports include American Electric Power Co., CMS Energy Corp. and Williams Cos.

Valencia was one of seven employees fired by Dynegy since Oct. 18 after an internal company review, the Houston-based company said in a separate statement.

Dynegy's shares fell 15 cents, or 6.7%, to \$2.07 on the New York Stock Exchange.

Note:  
<sup>1</sup>Source - Federal Reserve Statistical Releases, Historical Data, Canada -- Spot Exchange Rate  
<sup>2</sup>G-AFT Straight Ficed Variable Rate based on Malin to On-System Deliveries (100% Load Factor)  
<sup>3</sup>G-SUR charges apply to merchant generators, i.e. Duke, CalPine and Mirant; however, utility-owned generators and co-generators are exempt.  
<sup>4</sup>Shrinkage Allowance defined in PG&E Rule 21.  
<sup>5</sup>Includes delivery and reservation (based on 100% load factor)  
<sup>6</sup>GRI = Gas Research Institute Charge. GRI Reservation unit rates reflect high load factor reservation charges  
<sup>7</sup>ACA = Annual Charge Adjustment  
<sup>8</sup>PGT-NW Transport Charges for October 2, 2000 through June 20, 2001 have been revised from Mike Harris' October declaration. This occurred as a result of new information received from PGT-NW personnel regarding the GRI Res. Surcharge (Col. 11), the GRI Del. Surcharge (Col. 12) and the ACA (Col. 13)  
<sup>9</sup>Fuel charges do not apply for delivery service only.
