Power Pack Battery Care

Some precautions should be taken to maintain the performance of the rechargeable NiMh receiver pack in your model. Improper use of the battery pack could result in personal injury or damage to your truck.

- Only use approved chargers for NiMh battery packs (such as the Traxxas RX Power Charger). Do not exceed the maximum rate of 1 amp.
- Do not short circuit the battery pack. This may cause burns and severe damage to the battery pack.
- Do not burn or puncture the batteries. Toxic materials could be released. If eye or skin contact occurs, flush with water.
- Store the battery pack in a dry location, away from heat sources and direct sunlight.
- Nickel Metal Hydride batteries must be recycled or disposed of properly.
- Do not completely discharge the RX Power Pack or you could damage it. Do not use dischargers on the pack. Store the batteries with at least 25% charge. Stop running and recharge at the first indication of reduced voltage.
